Now this is my question: do hams *ever* talk about anything besides what
kind of rig (s)he's got, ham problems, ham equipment, etc? As a waiting
(as in for my ticket) prospective, I've liistened to the local repeaters,
and personally, the conversations seem pretty boring if that's all you
ever talk about. Have I missed anything? or something? Is the purpose
of ham radio to talk about the technicalities of it? I know that the
whole nature of it requires technicality, but isn't there more to
it than that?

--jesse (still waiting)

2457. The ARRL is a business (was "Re: ARRL--->Online Repeater directory")

Newsgroup: rec.radio.amateur.misc

Stephen Baker (sbaker@umassmed.UMMED.EDU) writes:

> The league publishes the repeater directory which it currently
> enjoys monopoly status. This must be enormously profitable for them
> as they are the sole source for such a directory

John E. Taylor III (rohvm1.mah48d@rohmhaas.com) replies:

> Enormously profitable? I don't think the League makes a _bundle_ on
> anything. They _are_ a business, though. As others have pointed
> out, non-profit does not mean that you can't _make_ money, it just
> governs what you _do_ with the money you make.

A league official recently told me that the ARRL spends an average of $75 per year per member. If I'm not mistaken, membership costs only $40. That extra $35 per capita has to come from somewhere.

As John very correctly points out, being a non-profit organization and generating revenue are not mututally exclusive. Although I'm neither a tax lawyer nor an accountant, my understanding is that, excluding an allowed accrual for operating expenses, a non-profit organization's income and expenses must balance to zero at the end of its fiscal year.

> I thought that the whole idea of Conway's database was that net.hams
> would supply the empirical data, so it would be home-grown. Maybe
> I'm confused

I interpretated Conway's project more as an effort to liberate the data from the printed page and get it into a machine-readable format, making it vastly more useful. If some of the erroneous data in the published directories gets corrected in the process, so much the better.

> Having seen the data that is sent to the ARRL, I can confidently say
> that the effort of Bart Jahnke at the ARRL is minimized, since the
> regional coordinators must supply the data to the ARRL in a format
> almost identical to that which appears in the Repeater Directory.
> The ARRL simply appends the data together and voila! a Repeater
> Directory.

Interesting point. By this measure, it would seem to me that the volunteers who have undertaken to keypunch the data (reagardless of their sources) for Conway's project deserve more credit for their efforts than the League does.

> I am happy to report that T-MARC is implementing an "ombudsman" to
> verify the accuracy of its own data. The ombudsman will take the
> list of repeaters and verify that each one is on the air.

Bravo! Perhaps some of the other coordinating bodies will follow T-MARC's example. There are a handful of repeaters listed for my area that I've never heard a peep out of since I bought my first HT in '85. When I hear that there are long waiting lists in my area for a coordinated pair on 2M or 75cm, I often wonder if these phantom allocations are preventing someone else from getting a machine on the air, or whether they are merely bits of dross at the bottom of the files that nobody has ever bothered to clean up. Any thoughts, anyone?

> I still think that accuracy is crucial, since inaccurate data is
> worse than no data at all. So, why are we still jabbering about
> this? Don't say nothin, jes do it!

It seems to me that there's a much better chance for input from users concerning inaacuracies to have an impact on Conway's database than it does on the existing directories.

I disagree completely. I applaude the decision.

As the trustee for a local 440mhz repeater, if I want someone off
my machine, up to now the only recourse I have had is to ask them
politely. If they continued to to operate "simplex" on my repeater
input, well, golly, that was just too bad for me, huh?

Since there are dozens of CB scumballs who, unfortunately, with the
declining price of dual-band radios, have decided to explore 440 (I
guess it was inevitable), I welcome this precident wholeheartly, as
now I can easily, with the FCC's backing, keep the effluvia from
overflowing onto my machine. Overall, the quality of life for the
users of my machine is increased, as they don't have to deal with
the aftermath of a poorly implemented nocode license on a daily
basis.

>I'd be interested if other people agree.

I agree, both with the idea that government is too quick to say "there ought to be a law" and that scanner hobbiests are at heart voyeurs. That's where the basic difficulty arises. Laws against Peeping Toms have existed for centuries. Congress is trying to extend that principle into the wireless age, but they're making the same mistake here as they are with the problem of violence in society. Banning scanners will be no more effective than banning guns, and has the undesirable side effect of causing unnecessary harm to legitimate users of these tools. The real problem in both cases is sick and twisted individuals with no sense of morals or ethics, not the hardware that enables them to pursue their voyeurism or violence.

I like to talk about drunkeness, debauchery, politics and
current affairs. This may be the reason that no one ever talks to me
on the Los Angeles repeaters.

Mind you, when I do get technical and say things like "Your
deviation is low", they offer to change their batteries.

If you disable an electric fence and the livestock gets out and causes
damage or gets killed, you're in big trouble. Those critters are expensive,
and if someone hits one with a car...

If you can wait a few weeks until the grass starts to grow, the livestock
will get a few zaps, learn about the fence, and I'll bet the owner shuts
it off.

It also helps to make sure the fence has good grounds and no partial shorts
to fence poles, the grass, etc.

Galen, KF0YJ
I get E-fence I too.

>ohm unbalanced (coax) transformer which would be good
>up to about 1Ghz?

You are making a rash assumption that the input impedance of
your scanner is 50 Ohms across its range. Trust me, it isn't.

If your antenna is not working optimally with your scanner,
there are many things that could be wrong besides the balun and coax
impedance. Loss in the balun at frequencies of interest may be one, so
get the best TV/UHF balun you can find. The antenna may not be optimum
at the frequencies of interest.

Feeding your scanner with 75 Ohm coax won't make any
difference that you will notice. Feeding it with a long run of cheesy
coax will make a difference.

Getting your antenna up high and in the clear will make a
difference.

Source record: 270172

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Ah yes, DX Packetcluster. "Hey George, the link's flaky."
: "Well put up stacked beams and pile on the kilowatts,
: to hell with the other digital users, the DX spots
: have to get through." (I've actually heard exchanges
: like that. The lack of cooperation between the Packetcluster
: operators and the rest of the digital community is somewhat
: legendary. It's that Type A DXer mentality.)

Considering what Gary has written, I don't find the lack
of cooperation a surprise. Nor do I really think it to
be a problem worth solving, due to the lack of excess
capacity to be shared. Actually, having a number of
separate networks may actually be an advantage in an
emergency, since the redundancy may help assure that
something is still working after the disaster strikes.
It might also be useful for seeing what actually works
better in the real world.

BTW--how else does one improve a point to point link,
besides using bigger antennas and more power? The only
solutions I can think of are changing frequencies or
adding sites. Obviously, if there is an interference
problem, it is easier if the *other* guy were to move.
I don't think there is any disagreement that sites are
hard to find, which is why I say people should keep an
open mind and consider a variety of possibilities.

>points I've tried to make in some of my CNC contributions.

Yes, but as you indicate below, the sites we *can* get aren't usually
sufficient for a LOS network of national scope. I can't emphasize enough
how *big* the vacant spaces are between groups of amateur packeteers in
much of the country, or how unsuited to LOS paths much of the terrain
separating them is.

> And in case you think I'm in a densely populated, ideal terrain out here,
>think again. Mountains only work for you when you can get access and have
>helpers to maintain them (as you suggest). I end up spending a lot of my time
>with a 3 arc-second elevation database trying to figure out how to make
>a well connected network out of sparse users and large obstacles. My few
>links are (too) long just as you say yours are there.

Yes, but, for example, there are more hams in LA metro than in all of
Georgia. Other states are even less densely populated with amateurs
and/or suitable high sites. This is a source of incredible frustration
to a potential network designer.

> My argument with your 56kbps approach is that it simply doesn't come
>close to being enough capacity. It isn't nearly adequate for the needs
>of a competetive nationwide amateur network. And, in addition,depending
>on non-LOS propagation while maintaining reliability is an even less
>optimum use of resources.

The only reason I'm pushing 56 kb BLOS links is that I think they're closer
to *possible* than microwave LOS links in many cases. I do *not* say
we shouldn't use faster links where we can make them work. I just don't

think that's going to be enough places to fill out the national network. I think we're going to have to use beyond LOS paths for a lot of the links, just as we do now at 1200 and 9600 baud. If we can upgrade most of those to 56 kb, we'll have made a large improvement in the network capacity and capability. Now I know that doesn't fullfill your dream of a data superhighway, but just as we don't build interstates anymore because it's too costly to serve the remaining areas, I think we have to scale our network plans to the reality of paved two lane rural highways. That's still a big step up from the game trails and dirt ruts we're using now.

> How do you intend to support even a fraction of the "20% of hams who call
>packet their primary mode" with even *mediocre* performance (never mind
>something competetive with telephone line modems which would stimulate and
>support growth), 50 dB fade margins etc?

As the telcos know, most traffic is local. Out of LATA traffic is orders of magnitude less than what the local switches have to support. I'm talking about the out of LATA connectivity here. If a local area can support megabaud+ local hubs, great, but for the vast expanses the national net has to cross, that's not viable. A 20:1 ratio of intra-LATA to inter-LATA capacity is reasonable.

> You've presented some equations relative to non-quality paths, troposcatter
>etc, could you show us how a system like that can provide the required
>total information capacity and approximately what it might cost?

I'll give a quick cost estimate, about $6 million in capital outlays and a continuing site rental of around $1.5 million per year. That'll buy us a 47X increase in speed, and a much higher increase in effective throughput due to engineered duplex non-contending links, over what we have now, and give us the full connectivity that we currently lack. Long distance performance will be limited by the network delays and capacity limits, but at least it will exist.

> Could you present an estimation for us all of what the approximate vhf
>hardware and resulting per-user capacity of a reliable nationwide

> My estimates and opinion of the above indicate that it falls orders of
>magnitude short of providing service adequate to support itself in an
>amateur environment. I truly hope you can show me my error(s) and that a
>beyond-LOS vhf network is viable.

Well there is an existance proof that beyond LOS VHF networks are viable in the amateur community, *the existing 1200 baud networks*, and their site costs are on the same order as the proposed system. What I'm proposing is a dramatic upgrading and expansion, at low UHF, of that system, but with the careful engineering and organizational maintenance that the current

system lacks. No it won't carry long distance digitized voice or video, much as I would like that to be true, nor will it allow remote interactive logins on a coast to coast basis, but it will allow the movement of Email and other bulk data transfers in a timely manner in a way that's completely divorced from the commercial communications infrastructure. And higher speed links in local areas, *where they are viable*, will allow some of those advanced features. We just can't support that kind of bandwidth and response time on a national basis. Too many sites, too much geography, too few hams.

>it than that?

Sure. Hams also talk about their operations and illnesses a lot. Old
people tend to be sick a lot. And then there's the continuous blather
about traffic. One rare ocasions you'll stumble across a group that
actually will tackle interesting topics. Some hams have a life outside
radio. For the last two mornings, the discussion on my repeater has
centered on restoring old Dodge Powerwagons. We also freely discuss
politics, Unix wizard tricks, and the merits of .410 shotshell derringers
versus .22 Mag derringers as belly guns. We try to keep the ham radio
related discussions off-line and handle that at lunches and over the
telephone. Seems somehow "business related" to talk about radio on
the radio.

Actually, judging by the number of persons tuning up live, very few even have dummy loads _without_ the bolometer. Others commenting on a different (and hopefully expired) thread would tell you that a spectrum analyzer on 2M is useful as a Ramsey-finder. Unfortunately there are more deficient radios out there than the few Ramsey kits that were not properly aligned by the builder. A few more deficient operators, too!

speaking of hamspeak and contentless communication ;^)

from my observation, usually the retired people are the experts at
that. Yesterday on my way home from work and the usual nut net
with about 8 people talking, and all of a sudden the two retired
people took over and was talking hamspeak (like repeating the same thing
over and over again each time they spoke), and then they were about
to clear because they said they do not want to hog the repeater
(yeah right), but I think they talked about ten more times after they
said clear before they actually let the repeater go. of course,
everybody in the net was trying to be polite and nothing was said
about it.

2480. Status of Online Repeater Directory Project....

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-03 19:05:39 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94Mar3190539@mipgsun.mipg.upenn.edu>
Source record: 270207

In the subsequent two posts, I enclose copies of the two letters that the ARRL has or will send me. The second letter has not yet been received so I am unable to verify the accuracy of the email version compared to the printed version but I have no reason to believe that there will be any differences.

In response to the two written letters as well as a telephone conversation that I had with Mr. Imlay, the author of the letters, I state below the current aims of the project, the objections that the ARRL has with the existing database as I understand the situation, and the current ideas to work around the restrictions imposed on the project. The list of ARRL objections stems from both the two letters posted and the telephone conversation I had with Mr. Imlay. It is my current plan to give the project one last try before giving up.

==========

GOAL

The creation of an online database of amateur repeaters. The advantage of an online database is obvious since it allows arbitrary user searches. This is far less restrictive than what is currently available. An online repeater directory is more easily updated to correct for errors, new repeaters, repeaters that no longer exist and changes in repeater status. It is my hope that the ARRL will not turn around and publish a online directory of their own as this would make my efforts a waste. I am more than willing to let the ARRL carry the ball if they so desire. If so, I can fold up shop, consider the project a success and get on with my life; I have plenty of other interesting projects in the back burner.

ARRL OBJECTIONS

The ARRL objects to the geographic descriptions used in the current database. Specifically, they object to the middle location descriptor between State and immediate location.

The ARRL objects to the contents of the comments field. The use of ARRL abbreviations (e.g. o for open, etc) will not be permitted if it can be construed to be coming from the ARRL repeater directory.

The ARRL will not give permission to use the data in the repeater directory in any form. Any data present in the online directory must not have its source from the ARRL directory.

PLANS FOR THE PROJECT

The parts of the ARRL database not subject to copyright will be extracted and used as a starting point for a new directory.

Given my understanding of the ARRL's restrictions, I believe that I can restart the online directory project without making the current data format obsolete. The definitions for the fields that the ARRL objects to will be clarified and any extensions will make use of some of the reserved fields. This way, existing software that has been written to use the database will not have to be rewritten.

The comments field will use only English words. This plan may have to change if it turns out that this unduly burdens any software that is written to access the data.

The middle geographic descriptor (field 11, minor region designation) will be revised. From what I understand, field 10 (major region designation in which we generally put the State) and field 12 (immediate location) is not under dispute. Since we may have problems with using the designations North, East, West, South, etc. since the ARRL uses these designations sporadically in the directory, I am hoping to use nearest major city or some other landmark that would be familiar to a traveller NOT living in the area. For example, a repeater in Hell's Kitchen in NYC would be designated as being in New York City in field 11.

I have heard opinions that say that the data is not subject to copyright (one such opinion motivated me to start this entire thing) and others which say that it is. Ultimately, I do not care one way or another. I prefer to avoid the threat of legal action in the first place. Given this, I plan to comply with the ARRL requirement not to use the directory as a source of information. The revised project will take input primarily from users with coordinator input where this is possible. From what I understand, some coordinating bodies are likely to refuse to cooperate. We will consider coordinating body data to be the "icing on the cake."

I have received flames to the effect that any repeater directory must contain totally accurate information and that allowing a measure of inaccuracy defeats any benefit whatsoever. I note, however, that no totally accurate database exists anywhere. All the databases currently available contain numerous errors and all are a crude approximation of reality. While accuracy would be nice, the online database will probably not be able to achieve the level of accuracy that some would like; it simply is not practical at all. The online directory project will rely on the honesty and the good faith of its users. In effect this is the same trust that is relied upon by every repeater database. While accuracy is appreciated, it will not be allowed to overburden the data collection.

The renewed project will require a great deal of manpower which I or the number of volunteers currently available can devote. I am hoping divide the workload in some way. User data will hopefully be collected already in the format that I described previously so that

the collector will not have to do this.

Since I hope to not make the current file format obsolete, data collection from users can proceed immediately even before the next version of the format has been decided upon. I am hoping to use some of the reserved fields to indicate linked repeater systems.

While I have no particular desire to copyright the collected data, a number of volunteers expressed the interest to prevent the data from being "stolen". Thus, this will be done in all likelihood.

2481. first letter

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-03 19:07:31 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94Mar3190731@mipgsun.mipg.upenn.edu>
Source record: 270208

This is a (hopefully accurate) transcription of the first letter that was sent to me. Any typographical errors not noted below are my own. These are not my words and are the words of the ARRL. The use of the symbol "$" is in lieu of a non printable symbol in the letter.

Conway Yee, N2JWQ/AA

================== begin letter ================================

January 28, 1994

Mr. Conway Yee N2JWQ
2144 East 21 Street
Brooklyn, NY 11229

Dear Mr. Yee:

This office represents the American Radio Relay League, Incorporated. I have been referred an Internet message posted by you concerning the publication of a repeater database on line. While the League does not wish to be uncooperative, and is in fact supportive of volunteer efforts to provide information to radio amateurs, it is unfortunately obligated to enforce its copyrights, or lose the ability to do so. Your use of the Repeater Directory, and its format, as the basis for your on-line database is an infringement of the League's copyright. We are compelled to request that you cease any use of it in putting together any repeater database.

I understand from your Internet message that you have been informed that use of the data from the Repeater Directory is not a copyright infringement. I disagree with whatever source you have consulted, however. The Repeater Directory is a compilation, as defined at 17 U.S.C. $101, and is protected as such by 17 U.S.C. $103. Furthermore, your database uses the format of the League's Repeater Directory, and by your own admission uses the same coding sequence for the characteristics for each repeater. This is a separate basis for concerns about copyright infringement.

The enforcement of copyrights is not something in which the League wishes to involve itself, and we certainly do not intend to deprive anyone of information about repeaters. We are placed, however, in a difficult position, to the extent that the League's copyright cannot [sic] be enforced selectively. We are therefor obligated to request that you immediately stop all use of the Repeater Directory as you have commenced to do. We apologise [sic] for having to take this position, but must pursue any further publication of your database in any form which uses either the compiled data contained in

the Repeater Directory, or its format.

We hope that this does not cause you significant difficulty, and that you understand our position in the matter.

Yours very truly,

Christopher D. Imlay, N3AKD
General Counsel, ARRL

2482. second letter

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-03 19:08:08 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94Mar3190808@mipgsun.mipg.upenn.edu>
Source record: 270209

This is a copy of the letter that is the reply to my queries to the ARRL. This was taken directly from an email sent to me via email. Any typographical errors are the ARRL's.

Conway Yee, N2JWQ/AA

Mr. Conway Yee N2JWQ
2144 East 21st Street
Brooklyn, NY 11229

Dear Mr. Yee:

I am indeed surprised that my letter to you of January 28 has caused such concern among your Internet group. I hope that my last letter to you was not misinterpreted. Perhaps you would be kind enough to upload my letter to you and this one, without editorial comment, so that there will not be any confusion in the future on the part of Internet participants.

There are several reasons why the League, a publisher of materials for radio amateurs, and a membership organization, is required to maintain the copyright protection for its intellectual property. First, and perhaps most importantly, the law is that unless a copyright holder protects its property upon being alerted to an infringement, it cannot do so in the future. Therefore, if the League is ever going to protect its copyright in the compilation that is the repeater directory, it must do so uniformly, and on a timely basis.

Second, the repeater directory is one of the League's publications that it sells to fund its membership services. The publication is produced, in part, because the document is a service to radio amateurs. Also, in part, it is sold as a means of offsetting the costs of the League's programs, so that it may keep its dues at a reasonable level for members and continue to provide association services. The League provides certain services only to members, and others to everyone. The costs associated with this are substantial. It is not inexpensive to protect amateur frequency allocations, for example. The revenue for these programs comes, in large part, from the sale of publications. No reasonable person could expect that the materials that make up the compilation, which cost a significant amount to compile and produce in any case, would simply be given away. If we lost copyright protection for the Repeater Directory, others could simply produce a similar product and sell it. While

this is not your intention, of course, it may be that of others.

Third, we haven't the authority to permit you to copy the Repeater Directory even if it was otherwise reasonable to do so. Some of the material in the directory is itself copyrighted material, compilations of data, from regional repeater coordinating entities. We use that data by agreement with the copyright holders. Those agreements are not broad enough to permit us to authorize other uses of those compilations. Your unauthorized use of the Repeater Directory would constitute a violation of their copyright not only by you, but by the League as well.

You ask whether it is the League's position that it owns the "facts" present in the League's copyrighted publication. The directory is a compilation, and as such the document as a whole is protected. The League does not own the data, but it does own the compilation. Without attempting to teach a course in copyright law, the concept is that a copyright holder owns not an idea, but the creator's particular expression of that idea. You are certainly enough entitled to create your own repeater database, but you cannot copy the League's Repeater Directory as a means of doing so, and you cannot use the format of the League's Repeater Directory, including but not limited to the coding of the characteristics of the repeaters, and the geographic presentation of the data. The copyright holder has, among other rights, the exclusive ability to copy or reproduce the work, and to distribute copies of the work, as well as the right to prepare modified or different versions of the work, called derivative works.

If you want to prepare a repeater listing, you will have to do what the League, or any other preparer of a copyrighted work containing data, does: compile your own listing of repeaters by contacting repeater trustees, coordinators, and the like, and make your own listing. Any use of copyrighted works, such as the MACC repeater listing, or the Repeater Directory, in making your own compilation, is a copyright infringement. For the above reasons, we have to enforce the copyright.

I hope that this clarifies my last letter, and that there will not be any further misunderstanding proliferated on the Internet. You are of course entitled to your opinion of the copyright laws in the United States, and of the League's interest in protecting its ability to continue to publish the Repeater Directory. Basic fairness, however, demands that any factual representations made on the Internet on this subject be accurate.

Yours very truly,

Christopher D. Imlay, N3AKD
General Counsel, ARRL

It is profitable for the executives of the corporation. That's right, why
do you think some of these guys have made a career out of the ARRL? Not
because of their love of amateur radio but because of their love of power
and money. Very simple.

> A league official recently told me that the ARRL spends an average of $75 per
> year per member. If I'm not mistaken, membership costs only $40. That extra

Actually, I'll have to go over the annual report I have for the ARRL more
closely.

Actually you're pretty much correct but you can roll some of your
non-profit dollars into other tax periods.

>Oh, we are back to guilty_until_proven_innocent now? Be real!

Gary: I guess you mean to say `Be realistic' - not sure what `Be real' means.
I believe Mike is being realistic - talk to some of the OT VEs about what
some folks will do, in regards to cheating, in order to pass their test.

When I give a math exam I have to be quite vigilant in watching my
students; I've given quite a few Fs over the years to those I've caught
cheating. The students who've spent many, many hours preparing for an exam
should not have to share their reward with someone who was irresponsible
in their studies, whether it's a government radio exam or math exam.

73,
Jeff

Source record: 270185

rohvm1.mah48d@rohmhaas.com (John E. Taylor III) writes:

>You should check with a lawyer on this, but it's my understanding that if
>you do the basic research to compile all the data _yourself_, and choose a
>format that is dissimilar to the existing, copyrighted work, you probably
>don't infringe it.

Why must he do it himself? If he gets submissions from every user on the network indicating independant repeater status, even if it is in the same format, he is not violating any copyright. The repeater directory, like the phone book and the call book, are simply compilations of data.

Why must he hire a lawyer?

If he (or a submitter) used the ARRL repeater directory to generate the data, then the ARRL can be miffed if it wants. However, the Repeater Project that was being collected was intended to be an independantly generated document.

Explain to me why CallBook Enterprises is not suing Devon (for maintaining the buffalo.edu archive) or Fred (over his work in the QRZ CDROM)? ...

From: watson@lobby.ti.com
Message-ID: <watson.7.000F6A2B@lobby.ti.com>
Source record: 270186

I'm not a radio operator, just trying to get along with one. Need advice on how to eliminate neighbor's 100 watt 10 meter CW transmissions from my house intercom speakers. Only thing that works is turning down the volume at each speaker, then we can't hear the doorbell since it's part of the intercom/radio. We have put a hi-pass filter on the FM lead, disconnected the AM lead, soldered .01mf caps across the speaker terminals, and grounded his antenna to an 8' copper clad rod. Nothing works. I'm betting some of the ARRL guys on the net have the answer. Any ideas?
Thanks very much!

>ARRL guys on the net have the answer. Any ideas?

I commend you for taking the initiative to reduce RFI. A few notes/questions:

Fact: unplugging antenna/high pass filter did not help
Probably the RFI is coming in through other wires.

Fact: level of clicks are affected by volume control
Q: Where is the volume control?

if the vol control is at the console then the rfi is comming in from other
wires such as from door mic to console. Try ferrite bead and/or
capacitors.

Fact: capacitor at speakers did not help
i) common mode (capacitor would have helped differential mode) rfi
i.e., rf voltage is present at both wires of the speaker
Try ferrite beads. I think that Radio Shack carries them. Pass
both the wires through them. If you can get a toroid then wrap a
number of turns with both wires.
ii) rfi is coming in from from other wires such as from door

Other suggestions:

One possibility is that the field strength at you house is so large
that it would be tough to isolate long stretches of wire in you intercom
system. Can the ham locate the antenna further away from you?

Does the ham have a good rf ground?

The place to bypass is at the amplifier, not many feet from it at the speaker.
Right at the output of the audio amp should be bypassed. Also, you might
try line filtering. By the way, what does the CW transmission sound like?

With radio, once you've acquired quality paths, improvements on a single link are through increased antenna gain (whether by increasing the frequency or increasing the physical antenna size), except for a few rare propagation mechanisms, improving the receiver (until it's KT(ant)B limited) and increasing transmit power.

For a point-point circuit another improvement comes from decreasing rms path length. This means adding hops. This works since dividing a path in two (say) and adding one additional hop costs 3 dB (maybe less) in hardware but improves C/N by at least 6 dB (which is why I made a point of correcting one of Gary's previous errors).

The only other mechanism for improvement I can think of is to find a way to get guided waves instead divergant ones. In a wide area wireless context, I can't think of any that offer a lot of amateur networking potential. Inversions and ducts fit into this camp, as perhaps does some skywave and even groundwave propagation. Total internal reflection (fiber optics) is the miracle worker in this area but I don't know where or how we might apply it to amateur radio.

2493. Re: Anyone using JPS NIR 10?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-03 23:13:17 UTC
From: markeh@netcom.com
Message-ID: <markeh-030394151317@markeh.slip.netcom.com>
Source record: 270192

I have both a NIR-10, latest ROM, and a W9GR DSP II (commercial, non-kit version). They are hooked up with a switch to let me quickly change between the two.

Overall, I have 4 reactions.

1. NEITHER makes a signal audible that would otherwise be uncopyable (SP?). They simply make it somewhat more plesant to listen to.

2. I prefer the NIR-10. IMO, the signal quality is better, but this is probably a matter of opinion. However, the NIR-10 also has a delay in passing the sound through, so it needs to by bypassed when monitoring on xmit - there is circuitry inside the NIR-10 to do this.

3. BOTH units generate enought high-pitched audio whine that they require a high-cut filter following them. I think that I am relatively sensitive to high pitched noise, but I still think that this shouldn't happen.

4. I am not using them in a mobile application, so I have no opinion on ignition noise. However, I do have an occasional/regular/annoying problem with power line noise (S-9, sometimes higher), as I have a 12KV line outside my house. The noise blanker on my xcvr is better for this than either of the DSP units. (And, of course, the NB is before the AGC point, which external filters cannot be) In fact, when this noise is present, the impulse noise seems to cause lower quality with the DSPs. Meaning, that when I am having a noise problem I always turn on the NB, and then sometimes turn on one of the DSPs.

Hope this helps

The farmer will not turn off the fence as long as there are livestock
inside. They can tell when its off some how. At least all the cows I
messed with in the last 30 years.

My suggestion is to get a cheap am fm radio and walk the fence and find
what is causing the problem. It may very well be in the charger. Try to
make friends with the farmer. That is not usualy very hard to do. Just
give him a ring when you see his stock out or stop by and give him a
hand and visit. Find out if he has several chargers and check them all
and ask him or help him put it on the fence.

Most chargers have some noise.
Good luck

Some nominations for the VK2 WIA elections

We have some of the nominations for the VK2 WIA elections for
Council to be declared at the AGM on 10th April. The following
nominees are being supported by the Ad-Hoc Committee as in-
dependent candidates for the Council of the WIA (NSW Division)
and considered worthy of the trust and support of the
amateurs of NSW.

In no particular order we have the following candidates:

VK2KPC Pixie Chapple
VK2EFY Eric Fossey
VK2TCM Cesar Miranda
VK2SKY Richard Murnane
VK2CPK Peter Kloppenburg
VK2KUR Eric van der Weyer
VK2QZ Steve Pullen
VK2PJ Peter Jeremy
VK2AQJ Peter Jensen -- to be confirmed

There are other candidates nominating so there should be a
good list of willing workers to choose from to help get the
Division working harmoniously again.

Use your vote carefully.

STOP PRESS FOR FIELD DAY... The Morse Contest resulted in a win in

both xmitting and rxing to VK2IC. Errors were TWO marks and ONE mark respectively. He was presented with the Presidential Bottle for each victory. Well done and may he enjoy the fruits of victory.

Reminder of the change in 80m broadcast relay

Due to very poor propagation in this part of the cycle during summer months, it has been decided to drop the 80m relay of the cast from December to March inclusive. The relay will resume on the first Sunday in April, which is the 3rd this year.

BARTG Contest

Date: March 19-21 1994, sponsored by the British Amateur radio Teledata Group.
Contest period: from 0200Z Saturday to 0200Z Monday (48 hours).
Maximum operating time allowed: 30 hours for single operator and SWL entries.

Multi-operator stations may operate the whole 48 hours. The 18 hours of rest periods may not be less than 3 hours each. Times off operation must be shown on contest summary sheet.

Mode: RTTY only

Bands: 80, 40, 20, 15, and 10m.

Classes: A) Single op, all band
B) Single op, single band
C) Multi-op, all band
D) SWL

Exchange: Send: RST + QSO number + Time in UTC.

18 - 24 February 1994
Issue no.: 08

Date of issue: 25 February 1994

Date 18 19 20 21 22 23 24
10cm 106 108 108 105 107 107 105
A 07 23 13 65 51 11 (06 estimated)
T 51 81 51 64 -09 24 52

Summary of activity

Solar activity was very low on 19th and 21st February, low 18th and 22nd-24th, and moderate on 20th. There was an M4 flare on 20th.

The geomagnetic field at Learmonth (WA) was quiet on 18th, mainly quiet to unsettled on 19th-20th with a brief active period on each of those days. On 21st the field was quiet until 0900UT when a sudden commencement of 135nT occurred raising the field to major storm levels. The field on 22nd was at active to minor storm levels until 1500UT, then returning to quiet to unsettled on 23rd, and quiet on 24th.

Ionospheric F2 critical frequencies on 18th-19th were 10 - 30 per cent above predicted values, then nearnormal on 20th until late in the UT day when frequencies were enhanced by 30 per cent. Frequencies were enhanced by up to 35 per cent on 21st until 1500UT when they became depressed by up to 30 per cent. This continued until 0700UT on 22nd then returned near predicted values for the rest of the day. On 23rd and 24th frequencies were mostly near normal, with a short depression on 23rd at 1200UT, and several brief enhancements of up to 30 per cent on 24th. Sporadic E blanketed the F region for a short period on 22nd, and may have affected F layer communi-cations on several occasions on 23rd February.

Forecast for the next week (25 - 3 March)

Solar : Very low to low.

Geomagnetic: Quiet to unsettled with isolated active conditions on the 3rd.
Ionospheric: Near predicted to 25 per cent enhanced. Sporadic E may affect F layer communications at times.
Possible depressions to 20 per cent on the 3rd.

VK2SG RTTY DX Notes, 18 February

VK2SG RTTY DXNotes for week ending 18 Feb. 1994 (BID RTDX0218)

Really we must say that 3Y0PI is the DXPEDITION OF THE YEAR '94 and our congratulations go to the all the crew for having shown to all of us a real example of wonderful operation under severe conditions. Was excited, during my qso, to see on the screen Luciano, Luciano, Luciano, 599 599 from 3Y0PI. Tnx Tony, WA4JQS and Luis, XE1L for the outstanding effort repair-ing rtty gear.

Our thanks this week go to ZS5S, W2JGR, WB2CJL, 9X5LJ,)5ICY, I5IGQ and IK5PWJ Packet Cluster, DJ3IW and the Central Europe DX Cluster node DB0SPC, the NJ0M node of the Twin Cities.

Notes of Interest

ST PETER & PAUL ZY0. The operators on the Feb. 7th had severe problems with both generators. Fault was located on the kick-off cables which could not be repaired due to lack of suitable tools. They had to run on battery with about 10 watts until Feb. 14.

AH3D/KH0 Activity. Members of the International DX Golf Tournament have been active from 9 to 13 February as AH3D/KH0. While the SSB spot were reporting that call sign on RTTY no mention of /KH0 ??

BELIZE, V3. Large activity is expected from this country. Look for V31PP from 19 Feb to 12 March on all bands SSB and RTTY. Another operation is planned from Sigi, DL7UUO from 20 Feb. to March 3rd using V31UO on SSB, CW, RTTY and PACTOR.

GEORGIA, 4L. Piero, IK2BHX is now in Tiblisi as 4L1HX and will be there for a year. He promised RTTY activity soon. QSL via IK2MRZ.

Send your bandpass and notes for next week to Bob, WB2CJL @ W5KSI.#NOLA.LA.USA.NA or WB2CJL @ ZS5S.ZAF.AF.

Does anyone know how well this device works? I saw it in my most recent catalog from Tucker Electronics and Computers. The description says it requires +12VDC, so I guess you would have to haul around an extra battery if you wanted to go pedestrian mobile! Has anyone tried it with the TH78a?
73,

Todd Jonz (tcj@netcom.com) after my extensive editing, wrote:

: Bravo! Perhaps some of the other coordinating bodies will follow T-MARC's
: example. There are a handful of repeaters listed for my area that I've never
: heard a peep out of since I bought my first HT in '85. When I hear that there
: are long waiting lists in my area for a coordinated pair on 2M or 75cm, I
: often wonder if these phantom allocations are preventing someone else from
: getting a machine on the air, or whether they are merely bits of dross at the
: bottom of the files that nobody has ever bothered to clean up. Any thoughts,
: anyone?

: Todd, KB6JXT

Most coordinating bodies have a difficult time De-coordinating a former useful repeater. What is the process that your local coordinator uses?

How long can a repeater frequency remain inactive before the frequency is recoordinated?

Can some one buy or sell a coordination or does the frequency go to the next applicant waiting in line?

Have you ever contacted your local coordinator and pointed out these inaccuracies?

The southern california 220 spectrum management association must have a difficult task ahead, as they must de-coordinate several repeaters to accomodate the new fcc band plan for 222.000 - 222.150 MHz.

2501. frg-8800 stops operation after short time

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 01:06:32 UTC
From: pbauer@rnivh.rni.sub.org
Message-ID: <CM48Ey.1p6@rnivh.rni.sub.org>
Source record: 270199

My frg-8800 showed this problem a few months after I buyed it when
I was using a MIF-90 to tune quite fast through the frequencies:
At some time (30secs to few minutes) it stopped audio output. I then
stopped this computerized tuning and used it as normal receiver. Now
(lots of years later) the frq shows this behavior during normal operation:
turn it on, tune throuhg a few frequencies, and autio output stops.
The failure seems to be progressive: now I need to turn it of for a
while, and then I'm able to use it for a short period of time (<2 min)
and then the problem reoccurs...
Any ideas?

2502. Chest Harness for HT?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 01:11:14 UTC
From: dbr@world.std.com
Message-ID: <CM48Mr.B9C@world.std.com>
Source record: 270200

A few years ago, at a cross-country ski center, I saw an employee with a handheld radio attached to his chest with some sort of harness. It held the radio at a diagonal angle such that the antenna (VHF duck) pointed at his left shoulder and the base of the radio pointed at the right side of his waist.

The harness seemed to be made out of neoprene or nylon and was black in color. I want one. It would be terrific for cross-country skiing, because if you fall, you don't fall on your radio. Even if you don't fall, it makes the radio easier to use because you can simply press the ptt switch without removing the radio from the harness.

Does anyone have any information?

: mean. I know it means good copy, but what specifically does it mean? Does it
: come from the early days of radar, of ham radio, of military aviation or what?

I believe it comes from the old days before the RST system was invented.
The Q-signal QSA was a signal strength scale that went from 1-5 (versus
1-9 for the "S" in RST). So a signal report of 5x5 means you are very
readable and very loud.

Sam Watson (watson@lobby.ti.com) wrote:
: I'm not a radio operator, just trying to get along with one. Need advice on
: how to eliminate neighbor's 100 watt 10 meter CW transmissions from my house
: intercom speakers. Only thing that works is turning down the volume at each
: speaker, then we can't hear the doorbell since it's part of the intercom/
: radio. We have put a hi-pass filter on the FM lead, disconnected the
: AM lead, soldered .01mf caps across the speaker terminals, and grounded his
: antenna to an 8' copper clad rod. Nothing works. I'm betting some of the
: ARRL guys on the net have the answer. Any ideas?

I wouldn't expect soldering capacitors across the speaker terminals to help because the interference is affecting the intercom electronics, not the speaker. (If you disconnected the speaker wires from the intercom, I bet the interference would go away.) Also grounding the antenna or transmitter is unlikely to do any good.

Not sure what you mean about the high-pass filter on the FM lead. Do you get interference in your FM stereo as well? Or is it a wireless intercom that uses an FM transmitter to send the signal? Either way, it sounds like the problem is the ham's signal getting picked up directly by the wiring connected to the intercom/stereo.

Be careful about placing bypass capacitors across the speaker leads (on either end) because some amplifiers don't "like" a capacitive load and can oscillate. A better solution is to use what's called a "common-mode choke." You can make one by wrapping the speaker wire many times around a ferrite rod (the loopstick antenna from an old AM table radio works well for this) or better yet, obtain a good-sized ferrite toroid core and wrap the speaker wire many times through that. The ferrite choke should be located as close to the amplifier/intercom as possible (i.e. at the opposite end from the speaker.)

If that doesn't work, then try the same trick with the AC power cord going to the intercom. If there are any other wires going to the intercom/stereo, you might have to do it to them as well. Don't give up -- you might have to "choke" all incoming wires simultaneously to get rid of the interference. A big advantage of the common-mode choke method is that it requires no modifications or connections to the electronic equipment.

Suitable ferrite devices and interference-reduction techniques are described in a book from ARRL called "Radio Frequency Interference". The ham should know how to obtain a copy.

The above should at least help, if not cure, the interference. If you still have a problem after that, perhaps the ham can experiment with

moving his antenna to the opposite side of his lot.

SYNOPSIS OF ACT

Solar activity was low. Region 7682 (S18W40) continued to
develop slowly. This region produced several small flares, the
largest being a C6/SF at 03/0210Z. Growth in Region 7680
(S12E13) has slowed. New Region 7684 (S08E25) was numbered.

Solar activity forecast: solar activity is expected to be
low. C-class flares are expected in Region 7682.

The geomagnetic field ranged from quiet to severe storm.
Major storm conditions were observed at middle latitudes

from 0900-1200Z. Major to severe conditions were observed
at high latitudes from 0600-1200Z. There is no obvious cause
for this short-lived disturbance.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the next several hours,
becoming active to storm due to a coronal hole.

Event probabilities 04 mar-06 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 04 mar-06 mar

A. Middle Latitudes
Active 15/20/20
Minor Storm 35/40/25
Major-Severe Storm 05/05/15

B. High Latitudes
Active 30/35/35
Minor Storm 25/15/15
Major-Severe Storm 05/15/15

HF propagation conditions were below-normal over the high
and latitude paths. Low and middle latitudes saw near-normal
propagation. Conditions are expected to deteriorate on 05 and
06 March due to effects from a well-placed coronal hole.
Transpolar and transauroral circuits could see moderate signal
degradation (to poor and occasionally very poor levels). Upper
middle latitude paths are also expected to see minor signal
degradation during this anticipated disturbance.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
```

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

2510. Ham Radio areas on Prodigy, CServe, etc?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 04:36:42 UTC
From: wy1z@netcom.com
Message-ID: <wy1zCM4I57.At@netcom.com>
Source record: 270211

I am in search of the people in charge of the Ham Radio areas
(conferencing, files), on the popular commercial services:

CompuServe
Prodigy
America Online (I have this already)
GEnie
Delphi
any others I am missing

Any information people can provide would be most helpful.

Thanks much!

73,
Scott

2511. Adam Weiss, WA1WMZ, Silent Key

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 04:55:29 UTC
From: edinct@news.delphi.com
Message-ID: <2l6f01$fq5@news.delphi.com>
Source record: 270212

It is with great sadness that I must announce the passing of Adam Weiss, WA1WMZ, a longtime ham radio operator.

I had known Adam for over 20 years. I first met him when I was in highschool at a ham meeting of the Westchester Emergency Communications Association. Proving it was a small world, my brother married a woman he had previously been engaged to (both were hams). I later re-met him when joining Mensa, and he held a corner of the chupa and signed the Catuba
at my wedding.

The Funeral services will be held at Riverside Chapel in Mt. Vernon, NY, Sunday at 1:00. Shiva will be observed Monday, Tuesday, and Wednesday by his parents at his house.

SYNOPSIS OF ACT

BRIEF STD SYNOPTICAL INFORMATION FOLLOWS BELOW. THE SESC
DAT
THIS REPORT WAS COMPILED.

Solar activity was low. There were very few flares of
interest. The largest was a C3.6 event at 01/2230Z.

Solar activity forecast: solar activity is expected to be
generally low. Additional C-class flares are expected.

The geomagnetic field was quiet to unsettled over the last
24 hours. A few high-latitude regions saw periods of active
conditions during the local night hours.

Geophysical activity forecast: the geomagnetic field is
expected to be remain mostly quiet to occasionally unsettled
for the next 48 to 72 hours. A coronal-hole disturbance may
begin to elevate levels of activity on 03 or 04 March.

STD: Event probabilities 02 mar-04 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

STD: Geomagnetic activity probabilities 02 mar-04 mar

A. Middle Latitudes
Active 25/25/35
Minor Storm 10/10/15
Major-Severe Storm 01/01/05

B. High Latitudes
Active 30/30/35
Minor Storm 15/15/15
Major-Severe Storm 05/05/10

HF propagation conditions were normal over all regions.
Similar conditions should continue throughout the next 48 to 72
hours.

Well Conway, it would appear that you have shot yourself in the dick on this project. Perhaps next time when you run into an obstacle, you give some thought as to what the obstacle is before you run to the net and cry rape.

After rereading your original messages and then reading the copies of the letter from the League counsel, it is my opinion that you mad a lot of fuss over nothing.

It is indeed unfortunate that that seems to be the standard method of operation on the rec.radio.amateur.* newsgroups.

Congratulations on one thing though, you did manage to distract from the CW is Trivial war over on r.r.a.p.

: >intercom speakers. Only thing that works is turning down the volume at each
: >speaker, then we can't hear the doorbell since it's part of the
: >intercom/radio. We have put a hi-pass filter on the FM lead, disconnected the
: >AM lead, soldered .01mf caps across the speaker terminals, and grounded his
: >antenna to an 8' copper clad rod. Nothing works. I'm betting some of the
: >ARRL guys on the net have the answer. Any ideas?

: I commend you for taking the initiative to reduce RFI. A few notes/questions:

: Fact: unplugging antenna/high pass filter did not help
: Probably the RFI is coming in through other wires.

: Fact: level of clicks are affected by volume control
: Q: Where is the volume control?

: if the vol control is at the console then the rfi is comming in from other
: wires such as from door mic to console. Try ferrite bead and/or
: capacitors.

: Fact: capacitor at speakers did not help
: i) common mode (capacitor would have helped differential mode) rfi
: i.e., rf voltage is present at both wires of the speaker
: Try ferrite beads. I think that Radio Shack carries them. Pass
: both the wires through them. If you can get a toroid then wrap a
: number of turns with both wires.
: ii) rfi is coming in from from other wires such as from door

: Other suggestions:

: One possibility is that the field strength at you house is so large
: that it would be tough to isolate long stretches of wire in you intercom
: system. Can the ham locate the antenna further away from you?

: Does the ham have a good rf ground?

: Rajiv

Alan Bloom (alanb@sr.hp.com) wrote:
: A better solution is to use what's called a "common-
: mode choke." You can make one by wrapping the speaker wire many times
: around a ferrite rod (the loopstick antenna from an old AM table radio
: works well for this) or better yet, obtain a good-sized ferrite toroid
: core and wrap the speaker wire many times through that.

AM table radios are getting pretty hard to find (even junk
ones). What I've used *very* successfully are the ferrite
torroids from old TV flyback transformers. Any TV repair shop
will be happy to give you a burned out flyback for free. The CW
op in question might even want to try wrapping a few turns of
the power cord to his transmitter through one of them. Some old junk
TVs also have huge ferrite "torroids" as part of their yoke assembly
too.

>BTW--how else does one improve a point to point link,
>besides using bigger antennas and more power?

Ah, the DXer mentality at work. That's what those guys
thought too. The only problem was, that wasn't why the
link was flakey. The real problem was that they had
established the world's worst exposed terminal in their
single frequency network, and the link was being killed
by all the DXer's with 160 watt amps and beams trying to
make it to their hubs and capturing the link node's receiver.
It would be held off for minutes at a time by the continous
collisions.

Well as usual, the answer is yes, no, and it depends. If the 75 ohm
cable is lossy enough, say RG-59 that's been out behind the barn for
a few years, then the extra loss of making it a halfwave long at some
low HF frequency could very well exceed the mismatch loss you'd have
if you made the cable as short as possible. For the more typical case
of 75 ohm CATV hardline being used at UHF, making it a multiple of
a halfwave is generally a win, but making it as short as possible
and using low loss matching networks at each end, like the ZF Engineering
1/4-wave transformers, would be an even better solution.

This indeed can be one interpretation of the events and I am sure it will now be the predominant one. The entire argument stems from the belief that the original format violated ARRL copyright in two areas and that the material in the directory is shows sufficient "originality" to merit a copyright. On both points, I have heard arguments on both sides. Prior to the initial posting of the database, I checked on both things and was told I was in the clear. The ARRL disagrees.

In any case, I believe that there is a quote about hindsight and 20/20 might be appropriate.

I have been receiving sporadic flames (although far fewer than notes of encouragement) over this project ever since it began. At first it was about the attitudes toward possible inaccurate listings. Now it appears that the new flames will be over my interpretation of a letter from a lawyer. Since you are so omniscient of the wishes of others, would you care to take over the running of the project? I am getting a bit tired of it. I started this thing as a VOLUNTEER project that I thought would be a benefit to the community and it isn't all that much fun. I would be more than happy to turn over the reins to someone who says that they can do better.

This unit is a passive helical cavity filter with an RF sensed DC operated
TR relay. The external power is just for the sensing transistor and relay
coil. The filter has enough insertion loss that you want to bypass it during
transmit, thus the TR relay.

> of ham radio to talk about the technicalities of it? I know that the
> whole nature of it requires technicality, but isn't there more to
> it than that?
>
> --jesse (still waiting)

In my area, most hams talk about their location. For example,

Ham1: "I'm sitting in the parking lot at work. Where are you?"
Ham2: "I'm in the drive-through at Wendy's."

So sometimes technical discussions are less boring than other topics :-).

Seriously, making small talk is an art. Some people do it well, while others never really get the hang of it. But there are many bright spots. There's a lot of diversity amoung hams. If you can get past the small talk, there are a lot of interesting stories to be told. That's one reason I like HF: It adds to the number of potential QSOs.

And some hams are happy to hide behind the small talk. That's their right. They may enjoy just using the radio. The actual exchange is secondary. Or they may really like the technical discussions. I fit both of these catagories to some degree. But there are others that enjoy discussing "less boring" topics. Sometimes you just have to wait for the right QSO to come along.

Hope your license comes soon and good luck with the hobby. I'm sure you'll find some really great QSOs amoung all those boring ones.

I agree. I really have no interest in listening to cordless or cellular
conversations. As an amateur radio operator and EE, I either own or, if
the challenge arose, could build the equipment needed to monitor.

Once the government starts making the interception of certain signals
illegal, therein lies the challenge! Once you have somthing "cracked"
the fun is gone, IMHO. Same for digital encryption. The fun is in
cracking the code. Or at least getting to that point. Once the code
is cracked, it's time to move on. The only way to know if any
encryption method is secure is to ENCOURAGE people to crack it. As
with monitoring cellular and cordless phones, passing laws does
nothing. Same with digital encryption. If you have to pass a law
against breaking a code, how good is the code in the first place??

If you find such things intersting, check out sci.crypt, also on
the internet.

2537. Tandy Model 100 and Baycom/PMP

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 14:39:50 UTC
From: mam@cbnewsg.cb.att.com
Message-ID: <CM5A2G.LEt@cbfsb.cb.att.com>
Source record: 270088
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,comp.sys.tandy

Has anyone figured out how to connect a Baycom/Poor Mans Packet circuit
to a Tandy Model 100?

I just finished building a Baycom modem for packet, and I'd just love
to be able to use my portable, non-MSDOS compatible Model 100 as a terminal
to at least receive those packets.

Actually, we've been trying to get the Model 100 to decode the signals directly
through the cassette port. All we've been able to do is CW so far. RTTY
is next, unless someone has cracked that nut already ...

Thanks,

Mark KB2els

2538. QRP expedition

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 15:01:11 UTC
From: JMG@tntech.edu
Message-ID: <01H9KGYMM1AAEZEWHX@tntech.edu>
Source record: 270089

The Amateur Radio Club at Tennessee Technological University (TTARS) is going to be doing a QRP expedition (special events) on April 16, 17, 18.

The purpose of this expedition is to promote amateur radio, and in particular show how lower power is an effective mode of communications both for SSB and CW. I hope that this will really inspire the college students here (almost all are Technicians) to upgrade to General Class and to get them more interested in Ham radio in general.

We will be going to a state park that has some pretty good wilderness type areas with some great cliffs. If the weather permits we will be operating at some pretty spectacular locations. We plan on operating both SSB and CW with a possibility of 2 seperate stations. We will either have certificates or QSL cards with a picture of one of the locations. I hope to write the experience up for a magazine article.

I would like some input in setting up the schedule of operating bands/modes/frequencies. The only advertisement for this event will be via Internet and Packet (part of the concept). I think that we will probably operate between 15:00Z and 04:00Z daily. We will be setting up on the 15th and if things go well start operating in a test mode at that point. So what do suggest for example for CW from xx-xx on Y meters at ZZZZZ.ZZ freq-ZZZZZ.ZZ freq.

Due to the fact that most of the operators (99.9%) are not CW people (yet) much of the planned operating will be on SSB.. which I believe is good.. too many people have the concept that QRP is CW only and that turns some people off to start with..to get more people trying this... hopefully will be able to show them it works well on SSB also.

thanks

Jeff, AC4HF

2539. tax exempt 501 (c) status

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 15:04:28 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9403041504.AA01572@tix.timeplex.com>
Source record: 270090

I remember that when our club attorney reviewed this question for the local club here, that a radio or hobby type club, even though not for profit is not tax exempt per the IRS definition. If the club has a seperate activity, e.g. a scholarship fund, or a purely charitible function separate from the regular radio club activities, this would qualify, but I would have an attorney structure the corporation to permit this seperate activity. A radio "club" that is incorporated has to file a report with the IRS if income is even zero if more than a certain $$ amount is handled in the club treasury, even if the net club profit is zero. Also when it comes to getting a cheaper rate at the PO for newsletters etc., only IRS defined 501 C3 (charitable organizations e.g. churches, temples, religious organizations, red cross disaster relief etc.) are eligible. A radio "club" per se is treated as a 501 C7 generally, and even though it is non profit, it is considered a "social club" and not in the charitable class. An example is the ARRL. They are probably a 501C7 however, if they have a schlor-ship fund that is administered and seperated legally it could get 501c3 status, but only for activity and expenses asssociated with that activity.

2541. Announcement - ARRL Information Server

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 18:19:00 UTC
From: mtracy@arrl.org
Message-ID: <1994Mar4.181900.9219@arrl.org>
Source record: 270092

Announcement - ARRL Information Email Server (info@arrl.org)

The services that the ARRL provides via the internet include the
Email Information Server and the Technical Information Service.
The Information Server is an automated mail server that gives you
access to many of information files relating to various facets of
Amateur Radio. You can retrieve any or all of these files by
sending an email message to info@arrl.org here at ARRL HQ.
Each file you request is then mailed to you automatically.

To use it, mail messages to:

info@arrl.org

Each line of the message body should contain a command as shown below.
The subject of your message is not processed and may be omitted. You
may place as many commands in a message as you want. The files you
request will be sent to you in separate messages. Only ASCII text
files are supported.

Valid INFO commands:

reply <address> (may be needed - see below for explanation)
help
index
send FILENAME (example: send prospect.txt)
quit

In the above message example, "help" retrieves a brief set of
instructions for info, "index" retrieves a list of available files
and "prospect.txt" retrieves a text file containing information on
becoming a radio amateur.

Note to users with FTP capability: All of these files are also
available by anonymous ftp to ftp.std.com in the
/pub/hamradio/ARRL/Server-files/info area.

If you want to retrieve several text files with one message, use a
separate line for each "send filename" request.

Your From: field or Reply-to: field in your header should contain a
valid Internet address, including full domain name. If your From:
field does not contain a valid Internet address, the answer will not
reach you. If this is the case, then use the reply command as shown
above. When needed, this command should always be the first command
in your message.

IMPORTANT: Please use the quit command in your message. This will prevent processing errors from message signatures.

PLEASE NOTE!: This is an automated system not capable of handling written requests. Any questions on the info-server or the content of any of its files should be directed to mtracy@arrl.org.

ALSO NOTE!: Do *NOT* reply to messages sent from info@arrl.org - the reply address is redirected to keep bounced messages from endlessly looping. Write a new message to info@arrl.org instead.

The Technical Information Service gives League members on the internet better access to the knowledgeable technical staff here at ARRL HQ. Questions relating to Amateur Radio and related technical topics are welcome. To use this service, send a normal e-mail message to tis@arrl.org with your question spelled out in plain english. For best service, be as specific as possible and keep your line length in messages to a maximum of 80 characters. Due to personnel limitations, priority will be given to questions from League members.

Best Regards,

Michael Tracy, KC1SX, ARRL Technical Information Services Coordinator
(e-mail mtracy@arrl.org)

Sample of files available from INFO: (There are lots more!)

Note - If you are not yet an Amateur Radio operator retrieve the file prospect (send prospect) for information on how to easily get started in this fun hobby.

>What I think we should do is write to our congresspeople and tell them why
>we feel the cellular and cordless privacy laws are so misguided. Even if
>they outlaw the manufacture of scanners that can receive cordless
>(and I haven't heard anyone say that that is what is up for debate --
>only outlawing *listening*, not manufacture), those radios are going to be
>around for a long, long time as used equipment.

Been there, done that. My Congressman ignored my letter. The law didn't pass on his watch, so, in the finest tradition of politicians, I guess he feels no obligation to deal with it.

Amen to the long, long time. I just tuned up my old BC220 table-top scanner. 15 years old, 20 channels, and no 800MHz, but still not a bad radio if your city hasn't gone to trunked public service.

>I'd be interested if other people agree.

Yup. These laws, if I'm not misinformed, are unique in recent history in that up until their enactment, it was legal to listen to any waves passing through your home, as long as you didn't act on or disclose what you heard. You are now a criminal if you choose to *tune in* to these particular band segments, regardless of what you do with what you hear. More such laws will follow, since government and regulations never shrink in size.

A colleague is thinking of buying the new Drake semi-portable SW-8.

Would any new owners of this receiver care to provide any feedback on it? My colleague would be very grateful.

Please email your comments to me directly as well as posting to the group.

Thanks,
Lee <lee@tosspot.sv.com>

: I remember that when our club attorney reviewed this question for the
: local club here, that a radio or hobby type club, even though not for
: profit is not tax exempt per the IRS definition. ...

Most ham clubs who have qualified have done it in the "Educational"
category. If the club has regular classes, publishes a newsletter
with ham news and info, has informative programs at club meetings, etc.
it should be possible to qualify. It's not easy, but it can be done.
Definitely have an attorney look over your articles of incorporation
and bylaws before sending them in.

: Also when it comes to getting a cheaper rate at
: the PO for newsletters etc., only IRS defined 501 C3 (charitable
: organizations e.g. churches, temples, religious organizations, red cross
: disaster relief etc.) are eligible.

Not true. While the Postal Service requirements for the non-profit
bulk mail rate are nearly identical to IRS 501(c) requirements, one does
not automatically qualify you for the other.

SB NEWS @ AMSAT $SPC0307
* SpaceNews 07-Mar-94 *

BID: $SPC0307

=========
SpaceNews
=========

MONDAY MARCH 7, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited distribution.

* AO-13 MODE S REPORT *
======================
With its new operating schedule, AO-13 is now seeing increased activity
during its Mode BS and S periods from users of the 2.4 GHz transponder.
With 4 hours available per orbit, listeners to the S band transmitter are
enjoying strong signals and noise free reception.

Antennas are mainly small dishes from 0.6m to 1m diameter although some
stations are successfully using loop Yagis. With a 1m dish on receive and
a single 19 element yagi on 435, good results can be achieved with 10 to 20
watts.

Stations having good signals on 2.4 GHz last week included:

N2IQU G0ONA ZS6JT VE3GTF JA7EC PT9FH OE6DGV TI5RLI VK6BMD

[Info via David, G0MRF]

* RS SATELLITE NEWS *
=====================
The following information is supplied by Andy, RK3KPK, the operator of RS3A,
the RS satellite command station:

RS10: Operating normally in Mode A: 145.860 -145.900 MHz uplink
29.360 - 29.400 MHz downlink
Autotransponder "Robot" ....145.820 MHz uplink
29.403 MHz downlink
Very good activity CW from DL,YO,G, HB - (swl RK3KPK),
Also it is possible to use special channel...145.850 MHz uplink
... 29.350 MHz downlink

RS12: Operating normally in Mode K: 21.210 - 21.250 MHz uplink
29.410 - 29.450 MHz downlink
Autotransponder "Robot" ....21.130 MHz uplink

... 29.454 MHz downlink

Please send QSL cards for "Robot" contacts to RK3KPK direct (SAE + I.R.C.):
Andrey Mironow, ul. V-Voloshinoj, d.11, kv.72
station Perlovskaya, 141014, Russia, CIS

or via DF4XW.

RS15: We are waiting for the launch of this satallite this spring.
The main frequencies of RS15 are:
Mode A: 145.857 - 145.897 MHz Uplink
29.357 - 29.397 MHz Downlink
Beacon 1: 29.398 MHz
Beacon 2: 29.351 (???) MHz
Power beacons low/high..... 0.4 - 1.2 Watt
Output of transponder ..... about 5 Watts
Inclination..... about 67 degrees
Height of orbit..... 2,300 Km
Weight of satellite..... about 50 Kg
Antenna..... dipoles
Memory of RS..... about 2 Kb

RK3KPK would like to hear about your DX contacts via the RS satellites.
For example, Andy had a DX contact with YV3... via RS6 in 1982!!! A QSL is
fine. Has anyone had better DX?

Comments to Andy should be directed via his packet radio address:
RK3KPK@RK3KP.RUS.EU or RK3KPK@RS3A.RUS.EU.

* DOVE OSCAR-17 NEWS *
======================
The DOVE spacecraft continues to transmit satellite telemetry and news items
using an AX.25 packet radio format. Shlomo, 4X4LF, in Israel provided the
following beacon reception:

DOVE-1>BRAMST [02/20/94 19:33:28] <UI>:
19th Feb 1994

DOVE reports have been received from :

KB4CYC KB5YVF KB7QLY KC1WD KC2SF
KC3H KC4ZRH KC6ROL KB2BD KD4GAR
KD4GHQ KD4SHL KD4UPF KD6NEW KI0G
KM6JV KMA1JL KR5J KX7L LA5VX

This will change in 3 Days

[vk7zbx]

Too bad they got my callsign wrong. :-)

* FO-20 SCHEDULE *
==================
The FO-20 command station announced that a slight malfunction in the onboard

command system had been detected. As a result, analog mode operation arranged from 09-Feb-94 will be performed on schedule, but there is a possibility of interruption due to satellite ground station control.

The present schedule is as announced before:

Analog mode:
09-Mar-94 07:05 -to- 16-Mar-94 07:30 UTC
23-Mar-94 07:52 -to- 30-Mar-94 08:15 UTC

Digital mode: Unless otherwise noted above.

[Info via Kazu Sakamoto, JJ1WTK]

A single answer for all:

Check the mods archive on ftp.std.com:/pub/hamradio/mods

Directory structure from there catagorized by manufacturer.

Should tell you all you wanted to know.

73,
Scott

2549. Examination Opportunities Scheduled 3/4/94 to 6/6/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 20:58:54 UTC
From: bjahnke@arrl.org
Message-ID: <2135@bjj>
Source record: 270100
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541

The 1994 test fee is $5.75.

EXAMINATION OPPORTUNITIES IN YOUR AREA:

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded

to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

AFTER THE EXAM - HOW LONG WILL IT BE BEFORE MY LICENSE ARRIVES?

If you've recently passed your initial examination for an Amateur Radio license, or if you've just upgraded, please accept our warmest congratulations! Now that you've passed the test, receiving your license in the mail is the next step.
The FCCs current license processing time is at 90 days. In addition, there will be extra time required within the volunteer examiner system of two weeks or so allowing your VE Team and VEC (if for Technician class or higher) time to process your application, your license might not arrive for up to 12 to 14 weeks.
To keep your wait for that new license or upgrade as short as possible, we are taking the following steps to give you the fastest possible service.
We have begun providing our VE Teams with express OVERNIGHT mailers for the return of applications from ARRL/VEC exam sessions to us at the VEC--and we at the VEC have begun sending our daily packages to the FCCs Licensing Facility via an express OVERNIGHT service.
We are also encouraging our VEs, and imposing the same emphasis upon ourselves, to process examination packages as quickly as possible to expedite your license.
Having implemented the above procedures, the ARRL/VEC wants your wait for your new license to be as short as possible.
If you have any other suggestions about the program, or services we provide, please feel free to contact us.
You can help keep the processing time as short as possible by ALWAYS bringing all ORIGINAL CSCEs (plus copies of them) and your ORIGINAL FCC license (and a copy), plus your identification documents (photo-ID emphasized), to every test session you attend.

THINGS TO BRING TO THE EXAMINATION

Be prepared to bring the following items with you to VEC examinations: Your original current FCC-issued Amateur Radio license (and a copy of it)--if you are licensed; Any original Written or Code Element credit documents (CSCEs) which are currently valid; Two forms of identification (e.g., a photo-ID or drivers license and another item indicating your current name and address); A calculator (if necessary); A pen and two pencils; and, the applicable examination test fee ($5.75 for 1994 test sessions).

TECHNICIAN CLASS GRANDFATHER CREDIT

If you hold a Technician class license which was issued prior to 3/21/87, you are not required to take the Element 3B (General class written) examination if you can provide a copy of your FCC-license dated before that date. If your licensed has since been renewed, and if you don't have a copy of the pre-3/21/87 license, you must seek a verification letter from the FCC.

To do so, write to FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245 and request a letter of "Verification of Technician License Held Prior to 3/21/87"--verifying that you were licensed as a Technician class licensee before that date (the date the Technician Question Pool was split off from the General class Question Pool -- March 21, 1987). After you receive that letter from the FCC, bring it to the test session with you in order to claim your deserved credit.

LOST LICENSES

If you have lost your license, be aware that VECs are not permitted to submit any upgrades to the FCC without a copy of your current license attached to the 610 form. In order to expedite your upgrade, you must write the FCC and request a replacement license. Since that can take several weeks to arrive, we recommend that you also request a Form 1010-B verification letter from the FCC which will arrive in a couple of weeks--and is legally binding license document. You may use that form as a license until your Form-660 license arrives. The original and a copy of Form 1010-B must be brought to the test session verifying that you are currently licensed--the copy of which will be attached to your upgrade application (in lieu of an actual Form-660 license copy). To request the Form 1010-B Verification Letter, write to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that you are requesting that a replacement license be issued to you--also be sure to request that they send you a Form 1010-B Verification Letter verifying that you are licensed.

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired,

VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code examination requirements. For information and applicable forms, send a SASE to the ARRL/VEC, 225 Main St, Newington CT 06111, and request our Handicapped Information Package.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541

2550. Dayton Hamfest Accommodations

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-04 21:25:01 UTC
From: ham@wam.umd.edu
Message-ID: <2l88vd$s30@cville-srv.wam.umd.edu>
Source record: 270101

Hi. This may seem like a weird post, but:

I've been checking into places to stay in Dayton for the Hamfest (April 29, 30, May 1) and EVERY hotel I've been able to locate in or near Dayton has been booked to the gills! What to do?

Is there any ham out there in netland who would be willing, for a few bucks, to open their home and rent a 25 year-old ham (me, NF3I) and his wife (Chris, N3MXZ) a room for a couple of days? I know that this is a scary concept, but I promise that we won't bite, and I hope you can say the same...

Or if anyone has knowledge of any lesser-known hotels...

Thanks much,
Scott NF3I

Call Antennas West. They carry a very nice one. Look for their small ads in
the back of most of the ham mags.

>Any ideas?

No idea what the problem is, BUT I experienced similar problems with my
frg9600 receiver. It seems to be related to the control cpu in the unit
- audio output stops and the lcd display flashes. Sometime, fiddling
with the controls brings it back, at other times, simply disconnecting
the antenna tuner and connecting the antenna wire directly will fix it.

How about we change the test to laying on ones side in a crashed police car and be able to send with the wires hanging out of the broken mic?

Would that satisfy the "emergency" nature of the requirement?

Could anyone please refer me to any good ham radio establishments that do mail order. I would appreciate any info on where and whether you have had any good or bad experiences with such places. In particular I am interested in purchasing a Kenwood 641 in the upcoming months and would like to find out some info on mail ordering.

It certainly will make a difference if it is only several hundred volts. It
will be like a direct short soon. An electric fence puts out thousands of
volts.

2561. Re: Getting Coax Seal OFF?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-05 03:59:55 UTC
From: bobw@eskimo.com
Message-ID: <CM6B4o.16p@eskimo.com>
Source record: 270113
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Before I "coax-seal" a joint, I wrap the connector with one layer of
black electrical tape then cover that with Coax-seal taking care to extend
the coax-seal past the electrical tape. This way, if you use quality
electrical tape, the only coax-seal to remove is the bit on the coax and the
base of the connector as the rest is discarded with the tape. (Cheap tape
leaves a gooey residue).

Actually, Jeff, Conway did acknowledge thed fact that he probably jumped
the gun a bit in his initial posting of the entire problem to the 'net.
I know he did so because he did it in e-mail between the two of us.
While I may be stepping a little over the bounds of proper netiquette by
disclosing this here (aplologies if that is the case, Conway) but it is
important to know what is really going on before accusing someone of
self-bobbitization (tm). FWIW Conway did, as is now clear, work with the
League along standard channels coincidentally with his post to the net.
If Conway had not posted his admittedly premature announcement to the net
he may have lost interest in theproject because he might not have ever
realized how many people were interested in the project. I think he has
also added a few new volunteers to his roster as a result of this whole
incident too.

: After rereading your original messages and then reading the copies of the
: letter from the League counsel, it is my opinion that you mad a lot of fuss
: over nothing.

: It is indeed unfortunate that that seems to be the standard method of
: operation on the rec.radio.amateur.* newsgroups.

: Congratulations on one thing though, you did manage to distract from the
: CW is Trivial war over on r.r.a.p.
Congratulations also on keeping the project alive.

73 es cheers,

2564. Re: Amateur Radio Newsline #863 25 Feb 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-05 04:26:51 UTC
From: brian@nothing.ucsd.edu
Message-ID: <2l91mb$phf@network.ucsd.edu>
Source record: 270116

The only thing I find surprising about this is the tone in Newsline that implies that the authors and editors of that rag seemed to think that so-called 'open' repeaters were under some legal obligation to accept all comers.

It has *NEVER* been the case that a repeater licensee could not control who used his equipment. The letter from the FCC simply reinforces what has ALWAYS been the rule about this. It's not an issue of 'closed' vs. 'open', no matter how much Newsline would wish to cast it in that light.

Anyone who thought otherwise was simply ignorant of the Rules.

Must have been a slow week for news.

NOTE: The Effective Sunspot Number for 01 MAR 94 was 48.5.
The Full Kp Indices for 01 MAR 94 are: 3o 1- 4- 3- 2- 2- 2- 3-
The 3-Hr Ap Indices for 01 MAR 94 are: 14 3 21 11 7 7 6 12
Greater than 2 MeV Electron Fluence for 02 MAR is: 9.9E+06

SYNOPSIS OF ACT

Solar activity was low due to a C3/1F flare at 01/2229Z
in Region 7680 (S11E25). This region continues to develop
slowly. Sunspot polarity measurements suggest that a small
delta configuration may be forming in the southern portion of
the region. Region 7682 (S19W27) also grew since yesterday and
produced a few subflares. New Region 7683 (S18W48) emerged on
the disk.

Solar activity forecast: solar activity is expected to be
low. C-class flares are possible in Regions 7680 and 7682.
There is a remote chance of an M-class flare in 7680.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the next 24 hours.
Unsettled to active conditions are possible by the end of the
forecast period due to a coronal hole.

Event probabilities 03 mar-05 mar

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 mar-05 mar

A. Middle Latitudes
Active 20/20/25
Minor Storm 10/10/15
Major-Severe Storm 01/05/05

B. High Latitudes
Active 25/30/30
Minor Storm 15/25/20
Major-Severe Storm 05/05/15

HF propagation conditions were normal over all regions.
Normal conditions should persist through most of 04 March
before effects of a well-placed coronal hole begin to elevate
levels of activity on 05 March. Minor signal degradation may
be observed on 05 March and for several days thereafter over
the middle latitude paths. Higher latitude paths could see
periods of stronger degradation, resulting in poor to
occasionally very poor transpolar and transauroral propagation.

The 3-Hr Ap Indices for 03 MAR 94 are: 14 35 50 80 22 5 8 8
Greater than 2 MeV Electron Fluence for 04 MAR is: 1.6E+07

SYNOPSIS OF ACT

Solar activity was low. Region 7682 (S19W54) is the most
interesting region on the disk as a maturing E-type sunspot
group. It has produced several C-class subflares during the
past 24 hours.

Solar activity forecast: solar activity is expected to be
low with continued C-class activity in Region 7682. An isolated
M-class flare is possible.

The geomagnetic field was mostly quiet with an occassional
unsettled period at some high latitude stations.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled becoming active to storm
due to a coronal hole.

Event probabilities 05 mar-07 mar

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 05 mar-07 mar

A. Middle Latitudes
Active 20/20/20
Minor Storm 40/25/25
Major-Severe Storm 05/15/15

B. High Latitudes
Active 20/20/20
Minor Storm 15/15/15
Major-Severe Storm 30/30/30

HF propagation conditions continued normal over all
regions. Gradual degradation of high and polar latitude path
signals is anticipated over the next 24 to 36 hours due to
effects from a well-placed coronal hole. Minor signal
degradation over the lower middle latitude regions is also
possible if this recurrent disturbance is as geoeffective as
was observed last solar rotation.

>What is HamWindows and what is DX Desktop?

HamWindows is an integrated package of HF operating aid programs for Windows. It includes logging, award tracking, packet, prefix data and almanac data (CIA World Factbook), computer control of HF rig, SWL data, and more. I just rec'd the brochures on it yesterday, and it looks very impressive, but I have not talked with anyone that is using it. I am not familiar with DX Desktop. The company that makes HamWindows has just changed its name from California Software Inc to

The total output current you may get will depend on the way the primary is wired, it is a centre tap vs 2 110V windings operated either in series or parallel. The centre tap type is unlikely, but would imply you can double the primary current. Secondary windings also have current limitations that should be checked.

Realistically, assuming all sorts of things, you can probably get 50% more output current at 25V, especially in intermittant use, maybe 20A is a reasonable rating.

2572. Ramsey SA-7 broadband preamp

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-05 11:08:38 UTC
From: eb795@cleveland.Freenet.Edu
Message-ID: <2l9p7m$8ns@usenet.INS.CWRU.Edu>
Source record: 270124

Hello.

I would like to know if any of you have had any experiance using
the Ramsey SA-7 preamp.
I am planning to buy a few to use for TV/FM DX. I plan on buying
one for each band-UHF/VHF-TV and FM.
I would like to know how easy it would be to limit the amp to th
e desired band, rejecting out of band signals.
The SA-7 is broadband from 100kHz to 1000mHz with a noise figure
of less than 4dB, and gain 20dB or greater. And at $14.95, seems
like a good price if the amp lives up to its specs.
I live in a very high RF area in Cleveland-I can see the massiv
e TV/Radio towers from my house. That is why I would like to ke
ep the amps on as narrow a freq range as possible.

Thank you.

>putting together an independent set of repeater info for their
>area?

>K7ITM

Exactly my sentiment, Tom! As a volunteer for the database,
I've entered data for a couple of states, and it doesn't take
long at all.

At least when you just have to create a simple text file with your
favorite ASCII editor or word processor. Then use my DOS based
program to *convert* the file to the colon delimited format. Also
entry of repetitive information is eliminated. Write a state name
once, and that's it. The program will do the rest.

Admittedly, this project is in a state of flux at the moment, and
changes in the format might arise, but the idea of the program
assisted entry is still valid, and format changes can be accomodated.

Why don't some of you guys think about "JUST DOING IT".

Email me if you're interested in doing some of the states that need
to be done still, and I'll tell you more about the program. It is
a total package with sample files and full docs (4 pages). I think
you'll find it real easy to use.

>>What I think we should do is write to our congresspeople and tell them why
>>we feel the cellular and cordless privacy laws are so misguided. Even if

>Been there, done that. My Congressman ignored my letter. The law didn't pass on
>his watch, so, in the finest tradition of politicians, I guess he feels no
>obligation to deal with it.

Write another letter to your Congressman. Mark it "personal and confidential"
on the envelope. Inside, tell him that some member of his staff is discarding
constituent letters without reply. That's the only real firing offense for a
Congressional staffer. Constituent services are the life blood of any Congress
critter with hopes of re-election. He will pay attention, and you'll at least
get a form letter thanking you for your input in the future.

Never *ever* let a politician get away with not answering his mail.

Gary

Source record: 270029

Roger Keating KD6EFQ (keating@nosc.mil) said...

>Scott, I share your dissappointment that the date changed, but I'm not
>sure that it should be moved back to the other date for 1994. Some of
>us have already made our plans for this years contest for the date
>stated now.

I realize this, but in talking to many hams both locally and via email,
I have found that all but one or two are not even aware that the contest
is currently scheduled for the first and not the second weekend! I bet many
people have already made plans for the second weekend.

>It would have been better if the National Convention hadn't been
>scheduled when it was, but if one had to move, the contest probably was
>the easier don't you think? I intend to participate in both the
>convention and the contest.

I VEHEMENTLY DISAGREE!! Moving either event from dates known or expected
over two years ago doesn't come close to being "easy". The ARRL June VHF QSO
Party is traditionally held on the second weekend in June, just as Field Day,
November Sweepstakes, the CQ WW and ARRL DX contests have their traditional
weekends. Many groups travel to specific sites year after year for events
like these and reserve both the site and their schedules way in advance.
Conventions that are the size of an ARRL National Convention are also
planned and booked a couple of years in advance. Clearly, the convention date
is a "hard" date, but the second weekend in June is as much a "hard" date
for the June VHF QSO Party because of precedent. The best course of action
for the ARRL should have been to leave both events on the second weekend of
June. I know you and some others would like to participate in both the contest
and the national convention, but I have got to believe that there are far more
people who have an interest in one but not the other of these events.

I suspect that the ARRL signed a contract with the convention site in Texas
and they'd be in big financial trouble if they cancelled or moved its date.
I contend that the ARRL has implicitly formed a contract with the participants
in major operating events by always scheduling these events for the same time
every year. If the ARRL defaulted on the convention contract a mere six months
before the event, they'd pay big. This is exactly what happened to us VHF
contesters: six months before the event, the ARRL announced via its annual
calendar of events that it was "defaulting" on the date of the June VHF QSO
Party, except it's the participants that will suffer in this case. The 1994
ARRL National Convention date was approved 2 1/2 years prior to the event. I
bet if they'd cancelled/moved the date a little after that, say 2 years from
event, the cost of the change would have been minimal. Even if they didn't do
that, the ARRL had the opportunity 2 1/2 years ago to schedule, announce, and
remind the VHF/UHF community of whatever non-traditional date they chose for

the 1994 June VHF QSO Party. The impact of the date change would have been much easier to take with that much notice, just as the impact to the convention site in Texas would have been easier for them to take with two years notice.

Once again, I urge people to contact their division directors and Dave Sumner at ARRL headquarters and make their opinions known and ask that the 1994 June VHF QSO Party be placed back to the second weekend in June.

73,
Scott WO1G

Antennas West carries a chest harness for HTs. They advertise in QST and 73, and their phone number is 1-800-926-7373.

I have no relationship with Antennas West, nor have I purchased any thing from them.

Notes of Interest:

Pratas Island - Preparations are proceeding for a 10 day expedition, starting 16 March, with 14 operators. It is not known if RTTY will be used. Details are expected to be released this week. Since this is not a DXCC country, WFWL.

A group from the radio amateur society of Thailand (RAST), led by Chamlong, HS1AAM, will operate as E28DX from Kho Samui Island (AS-101) from 8-10 April 1994. The island is 600 km south of Bangkok. They will operate RTTY, CW, SSB, FM, AMTOR, and Packet. Bands will be 2-160 meters (no WARC). Other operators will be HS1CDX, HS0/G3NOM, and HS0/G4UAV. Foreign licensed amateurs with DXpedition experience, especially in the IOTA field, are invited to participate in the expedition. Contact Ray, HS0/G3NOM at tel/fax +66 2 253 4864. QSL route to be announced later.

For next week's bulletin, send your Bandpass and notes of Interest to Luciano, I5FLN @ ZS5S.ZAF.AF or I5FLN @ 9X5LJ.#KGL.RWA.AF.

I have the following Icom equipment for sale which I wish to seel
only as a package!!!! The radio has a clean bill of health from Icom
service, dated 12/28/93. The radio and all of it's accessories are in
excellent condition and have been well cared for.

IC W2A (2m/440 Handheld Transciever)
HM 65 (Speaker Mic. W/earphone jack)
BC 72 (Rapid Charger)
2-BP 84 (Battery Pack, Provides 2 watts)
2-BP 85 (Battery Pack, Provides 5 watts)
AD 20 (Charging Adapter, Used with BP 84)
LC 73 (Radio Case)
BC 77 (Standard Charger {Comes With Radio})

$$$$$$$$$$$ This would normally run around $1000.00 NEW $$$$$$$$$

I am asking $600.00 for everything or best offer.

Please contact me at:

WANTED: Schematic or info on TOKYO HY-POWER 2M amp

I have a need to tune up this newly acquired amp without
the documentation. Anyone out there with paperwork of
any kind?

I do have some gain, but it is below spec -- would like
to see a schematic to do the final tuneup.

Any help would be appreciated.

transistor is Motorola MRF247
Amp is model HL-82V
2-10W in
35-80W out
(I put in 5 and get 20)

Apparently, they quit importing these things in the mid 80's.
does have preamp and supports FM, SSB, CW

THanks in advance.

In Conway's defense, I have to agree with Daniel. I had been sitting quietly in the woodwork waiting for Conway to post his completed database, but when this thread started I decided to take a more active role. I've been in contact with Conway since the middle of last week, and have found is response to me much more measured and reasonable than mine probably would have been had I been in his shoes.

Also, just for the record, I'd like to recognize Jim Maxwell, W6CF, Vice Director for the Pacific Division, for the interest he expressed in this issue and for his timely response to my intitial request for support. I sent e-mail to my division director (who happened to be out of town and wasn't reading his e-mail), and less than twelve hours later received a phone call from Jim in reply. He demonstated a genuine interest in understanding the issues, and requested that I FAX him a copy of Chris Imlay's letter, which Conway had sent FAXed to me at my request. The following morning I received a second call from Jim, asking if I would provide him with copies of the articles posted to "rec.radio.amateur.misc" on this subject.

While I don't know what specific actions Jim may have taken on this matter or whether they contributed to Conway's reply from HQ, I must say that I was impressed and pleased with the prompt support I received from Jim. I certainly hope that the ARRL members in other divisions are fortunate enough to have the kind of active, concerned representation that we do here in the Pacific Division.

Now that this little tempest in a teapot seems to be over and it looks like I'll have some data to work with, I guess it would be best if I got back to work on my Perl program rather than spewing opinions on this forum....

2589. Body Parts by J. Herman

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-05 23:50:10 UTC
From: jangus@skyld.grendel.com
Message-ID: <762477092snx@skyld.grendel.com>
Source record: 270041

Funny, you've followed up on almost all of my postings now trying to point out some alledged "fascination" with body parts.

Not trying to avert some attention to your own fascination are you?

--

I've used various body parts in previous postings because of their relevance to the article. For example:

Sitting down wrong on one's scrotum. This can really mess up your outlook on life for the day if it is the first thing you do to yourself in the morning.

Real men pound brass. I won't vouch for the validity of this, but from some of the commentary on this news group, anyone that doesn't know (and use) Morse Code on the air is something less than human.

So far Jeff Herman has been the only one to (a) try and link them as a "fixation" and (b) get noticably upset about it. Such being the case, I believe my postings were a success.

I'll make you a deal Jeff, if you want to discuss technical topics in a rational manner, I'd be more than pleased to do so. However, if you insist on acting like a buffoon on the net, don't forget to wear you're blue plastic helmet. (Like the one Corky wears on the TV show "Life goes on".) You'll need it when you get slapped around.

Quote for the day: "Come, let us peel back the foreskin of ignorance and apply the wirebrush of enlightenment." Geoff Miller

I want to thank everyone for their recommendations.
In summary, except for a few very minor complaints
(ex. somewhat flimsy "less used" button door, rig
bigger than most, VFO knob a bit sensitive) the Yaesu
FT-2400 was highly recommended by all who replied
(ex. very well built, very tight front-end (intermod?
what intermod?), really gets out, sounds great).
I really appreciated the kind responses.
Thanks again.

2592. FCC Exec fired for incompetance?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-06 02:53:45 UTC
From: keating@nosc.mil
Message-ID: <1994Mar6.025345.250@nosc.mil>
Source record: 270044

I heard second hand (this is how rumors start!) a report about an FCC official being fired because of incompetance. Here is what I was told:

National Public Radio reported Friday 4 Mar, that:
The executive at the FCC whose responsibility included the computers systems used at the commission, was fired due to his incompetance.

I did not hear this report; I was asked if I had heard it and if I knew anything more about it. I had no information about it, but was curious.

Is this report close to correct? What has anyone else heard or read concerning this topic? Please indicate sources.

I am looking for a stubby duck antenna for use with my Yeasu FT530.

I've only been able to find stubbies for 2m, 1.25m, or 70cm, but nothing
for two bands.

Can anyone help?

Thanks much in advance.

Scott

Does anyone know when the RST system came into use or how its predecessor worked?

As an avid SWL as a kid, I remember including a SINPO report in my QSL requests to shortwave broadcasters. In retrospect, it seems to me that the five point rating scale used in a SINPO report (signal, interference, noise, propagation, and overall rating) would actually be more valuable on phone than an RS(T) report, especially in these times of modern technology, when the "S" rating is all too often the essentially meaningless reading from the respondent's S-meter.

NOTE: The Effective Sunspot Number for 04 MAR 94 was 48.0.
The Full Kp Indices for 04 MAR 94 are: 1+ 1- 1o 2o 1+ 1o 1o 1o
The 3-Hr Ap Indices for 04 MAR 94 are: 5 3 4 7 5 4 4 4
Greater than 2 MeV Electron Fluence for 05 MAR is: 2.3E+07

SYNOPSIS OF ACT

Solar activity was very low. Region 7682 (S19W68) remains
the most significant sunspot group on the disk but has only
produced a few subflares (all below C-class) since yesterday.
New Region 7685 (S07E23) emerged on the disk.

Solar activity forecast: solar activity is expected to be
very low to low. Small C-class flares are possible in 7682.

The geomagnetic field was mostly quiet. Unsettled conditions
were observed at some high latitude stations from 05/09-15Z.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled becoming active to storm due
to a coronal hole.

Event probabilities 06 mar-08 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 06 mar-08 mar

A. Middle Latitudes
Active 20/20/20
Minor Storm 15/15/25
Major-Severe Storm 15/15/05

B. High Latitudes
Active 20/20/20
Minor Storm 15/15/25
Major-Severe Storm 15/15/05

HF propagation conditions were normal over all regions.
Conditions are expected to deteriorate over the next several
days due to effects from a coronal hole. High and polar
latitude paths should see the strongest signal degradation with
poor to occasionally very poor conditions existing during the
local night hours. Middle latitudes should see good to fair
propagation with occasional poor propagation during the local
night sectors. Low latitudes should see generally good
propagation with periods of fair propagation possible during
the local night hours.

REGION FLARE STATISTICS FOR THE PREVIOUS UTC DAY

C M X S 1 2 3 4 Total (%)
-- -- -- -- -- -- -- -- --- ------
Region 7680: 0 0 0 1 0 0 0 0 001 (2.6)
Region 7682: 11 0 0 15 2 0 0 0 017 (44.7)
Uncorrellated: 4 0 0 0 0 0 0 0 020 (52.6)

Total Events: 038 optical and x-ray.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

2607. This Week on Spectrum 03/12/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-06 07:18:47 UTC
From: spectrum@starcomm.overleaf.com
Message-ID: <2lc04n$sid@starcomm.overleaf.com>
Source record: 270059
Cross-posted to:
rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.scanner,rec.video.satellite,rec.radio.cb,alt.radio.scanner,alt.radio.pirate

This week Spectrum takes to the road. We will be broadcasting live from
the Winter Swl Fest in Kulpsville Pennsylvania. Everyone who is anyone
in the communications hobbyist community will be on hand. If you can
make it we would love to shake your hand. If you can't join in on the
fun in person, you can listen to our live broadcast at the usual times
and frequencies. See you at the Winter Swl Fest '94.
--
Spectrum airs live Sunday at 0300 UTC (2200 EST Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
KHNC, 1360 AM, Denver, CO (Denver Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EST, on WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
Monday at 0400 UTC (2300 EST Sunday),
on WWCR, 7435 KHz, Nashville, TN (World Wide)

Hello. If you have been able to use a Baycom (Baypac) type
modem with KA9Q/NOS (for example, JNOSX150) I would like to know
how it is done. Also, have you encountered any problems or
idiosyncrasies?
Thank you.

2617. Libelous Remarks re: Steve Woodard KD2KQ

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-06 15:38:30 UTC
From: <>
Message-ID: <jjc.762968310@wyvern.wyvern.com>
Source record: 270069

Note: This is a cross post from rec.radio.swap. I felt it deserved the
widest possible disemination due to the nature of the original post.

Jeffrey A. Kruth
4862 Montgomery Road
Ellicott City, MD 21043
(410) 750-7744

February 23, 1994

To Whom It May Concern;

If anyone actually cares about the libelous remarks put on INTERNET
by Steve Woodward, KD2KQ, I would like to set the record straight. Consider
the following:

1.) I dealt only with Dave Hallidy, KD5RO. All correspondence, money,
material, etc. was handled by and through him.

I HAVE ALL THE ORIGINAL LETTERS FROM HIM, WITH DATES, QUANTITIES AND SO ON.

2.) The first letter I received concerning this business was dated July 27,
1992 and the last letter received was dated November 19, 1992.

3.) Per the last letter received, out of a total of 15 TWTs and 15 TWT power
supplies, only one TWT was "damaged" (had a bent connector) and one power
supply had failed. All units were tested here at K-MEC prior to shipment
by myself and Don Davis, WB3AXQ. At that time I was trying to get another
power supply for Dave Hallidy to give out, but all the ones I had were dead.
I gave Dave several dead ones thinking that a "board swap" might fix one or
more of them.

4.) Further, due to the VERY LOW PRICE I was asking, (125.00 for tube
& supply, 25.00 more for X-band), I sold out before the end of summer. The
only complaint I received was from Rochester, out of the entire country,
Canada, England and Australia!
I did not have an infinite supply to keep sending replacements
FOR THOSE DAMGED BY THE END USER.

5.) Dave Hallidy was responsible for dispersement of the goods. He told
in a 'phone conversation that Steve, KD2KQ, had attempted to
"get more power" out of his TWTA and had "blown it up" while adjusting it.
DAVE HAD GIVEN STEVE A REPLACEMENT TUBE AND SUPPLY OUT OF THE YET
UN-DISTRIBUTED SUPPLY THAT I HAD SHIPPED TO DAVE, BECAUSE "STEVE SAYS HE HAD
JUST SLIGHTLY ADJUSTED THE POWER AND THE SUPPLY QUIT".

6.) No one offered to return any of the shipped material, at any time, for
credit against the time when I would get more tubes & supplies.

There are only two people who complained from Rochester. One is Steve, probably one of the most despicable, underhanded, lying cheats I have ever known, which considering some of the people you meet at Hamfests is quite a statement. Hey, Steve, remember how you guys cheated me on the waveguide deal, getting me to drive hundreds of pounds of X-band Waveguide from Baltimore to Rochester, then refusing to pay the AGREED upon price, telling me to "take it or leave it".

The second guy to complain is George Anderson, because Dave Hallidy admittied to me that he gave Georges's TWT supply to Steve. When I told George that he would have to see Dave to remedy the situation, George told me that Dave had "moved to another town, and I don't see him anymore", and "Dave and I aren't on great terms, anyway".

I did not ship any material that I knew to be bad and I believe that Steve blew his supply up and blames me. Only 1 power supply caused trouble out of 14 ordered, which is about 7% and that due to idiot operator mal-adjustment. Other than the described problem, Dave Hallidy wrote me that "All the other tubes and supplies work very well and the people who have gotten them are pleased".
Plus, I gave them more good tubes and dead supplies, free of charge.
Even if the one power supply had failed of old age, what the HELL do you expect from USED SURPLUS. These tubes & supplies are multi-kilobuck items. Therefore if you want an absolute guarantee, buy new ones!

Further, Steve lies when he says this took "well over a year" when it took only 4 months from start to finish.

His true nature as a despicable person is evident by the way he "wants to pay Jeff back" by lying on the INTERNET.

I was actively working with these clowns, trying to help them out and see that everything was made good on. After the waveguide deal, the LIES that followed the tube deal and the whole general atmosphere of the "Rochester Group", I had enough. Hey Steve, go ahead, go elsewhere, because I REFUSE TO DO BUSINESS WITH YOU.

The paltry sum that I get from selling to people like this is not, in anyway, compensation for the crap I have to take from lying bozos like this guy. (Bozo - yes, read his e-mail, he can't spell OR compose.)
One thing is certain, I will always find neat stuff for people who deal with me honestly and I won't miss the business of the jerks like this who don't. They will lose instead. I feel that Steve and his "friends" were trying to pull a fast one on me and get free stuff.
I am ready to support my side of the matter with the mail and the shipping records with anyone who really cares. I am considering legal action for libel in response to the untrue and unjust claims made by Steve Woodard.

Signed,
Jeff Kruth

Note: This message was posted by Jim Conrad as a favor for Jeff Kruth. He currently has no access to any of the e-mail services or to the internet directly. It does not reflect the opinion nor the views of Jim Conrad

in anyway. However I have done business with Jeff for many years and have
found him to be one of the most reputable people I have ever dealt with.
I have no doubt that he is the innocent party to this incident.

2618. Libelous Remarks re: Steve Woodard KD2KQ (previous Post)

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-06 15:58:41 UTC
From: jjc@infi.NET
Message-ID: <Pine.3.89.9403061034.A20282-0100000@larry>
Source record: 270070

Note: This is being cross posted for the widest possible disemination due to the nature of the original post from KD2KQ.

Jeffrey A. Kruth
4862 Montgomery Road
Ellicott City, MD 21043
(410) 750-7744

February 23, 1994

To Whom It May Concern;

If anyone actually cares about the libelous remarks put on INTERNET by Steve Woodward, KD2KQ, I would like to set the record straight. Consider the following:

1.) I dealt only with Dave Hallidy, KD5RO. All correspondence, money, material, etc. was handled by and through him.

I HAVE ALL THE ORIGINAL LETTERS FROM HIM, WITH DATES, QUANTITIES AND SO ON.

2.) The first letter I received concerning this business was dated July 27, 1992 and the last letter received was dated November 19, 1992.

3.) Per the last letter received, out of a total of 15 TWTs and 15 TWT power supplies, only one TWT was "damaged" (had a bent connector) and one power supply had failed. All units were tested here at K-MEC prior to shipment by myself and Don Davis, WB3AXQ. At that time I was trying to get another power supply for Dave Hallidy to give out, but all the ones I had were dead. I gave Dave several dead ones thinking that a "board swap" might fix one or more of them.

4.) Further, due to the VERY LOW PRICE I was asking, (125.00 for tube & supply, 25.00 more for X-band), I sold out before the end of summer. The only complaint I received was from Rochester, out of the entire country, Canada, England and Australia!
I did not have an infinite supply to keep sending replacements FOR THOSE DAMGED BY THE END USER.

5.) Dave Hallidy was responsible for dispersement of the goods. He told in a 'phone conversation that Steve, KD2KQ, had attempted to "get more power" out of his TWTA and had "blown it up" while adjusting it. DAVE HAD GIVEN STEVE A REPLACEMENT TUBE AND SUPPLY OUT OF THE YET UN-DISTRIBUTED SUPPLY THAT I HAD SHIPPED TO DAVE, BECAUSE "STEVE SAYS HE HAD JUST SLIGHTLY ADJUSTED THE POWER AND THE SUPPLY QUIT".

6.) No one offered to return any of the shipped material, at any time, for credit against the time when I would get more tubes & supplies.

There are only two people who complained from Rochester. One is Steve, probably one of the most despicable, underhanded, lying cheats I have ever known, which considering some of the people you meet at Hamfests is quite a statement. Hey, Steve, remember how you guys cheated me on the waveguide deal, getting me to drive hundreds of pounds of X-band Waveguide from Baltimore to Rochester, then refusing to pay the AGREED upon price, telling me to "take it or leave it".

The second guy to complain is George Anderson, because Dave Hallidy admittied to me that he gave Georges's TWT supply to Steve. When I told George that he would have to see Dave to remedy the situation, George told me that Dave had "moved to another town, and I don't see him anymore", and "Dave and I aren't on great terms, anyway".

I did not ship any material that I knew to be bad and I believe that Steve blew his supply up and blames me. Only 1 power supply caused trouble out of 14 ordered, which is about 7% and that due to idiot operator mal-adjustment. Other than the described problem, Dave Hallidy wrote me that "All the other tubes and supplies work very well and the people who have gotten them are pleased".
Plus, I gave them more good tubes and dead supplies, free of charge.
Even if the one power supply had failed of old age, what the HELL do you expect from USED SURPLUS. These tubes & supplies are multi-kilobuck items. Therefore if you want an absolute guarantee, buy new ones!

Further, Steve lies when he says this took "well over a year" when it took only 4 months from start to finish.

His true nature as a despicable person is evident by the way he "wants to pay Jeff back" by lying on the INTERNET.

I was actively working with these clowns, trying to help them out and see that everything was made good on. After the waveguide deal, the LIES that followed the tube deal and the whole general atmosphere of the "Rochester Group", I had enough. Hey Steve, go ahead, go elsewhere, because I REFUSE TO DO BUSINESS WITH YOU.

The paltry sum that I get from selling to people like this is not, in anyway, compensation for the crap I have to take from lying bozos like this guy. (Bozo - yes, read his e-mail, he can't spell OR compose.)
One thing is certain, I will always find neat stuff for people who deal with me honestly and I won't miss the business of the jerks like this who don't. They will lose instead. I feel that Steve and his "friends" were trying to pull a fast one on me and get free stuff.
I am ready to support my side of the matter with the mail and the shipping records with anyone who really cares. I am considering legal action for libel in response to the untrue and unjust claims made by Steve Woodard.

Signed,
Jeff Kruth

Note: This message was posted by Jim Conrad as a favor for Jeff Kruth. He currently has no access to any of the e-mail services or to the internet directly. It does not reflect the opinion nor the views of Jim Conrad

in anyway. However I have done business with Jeff for many years and have
found him to be one of the most reputable people I have ever dealt with. I have
no doubt that he is the innocent party to this incident.

2620. NEC 3D MultiSync

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-06 17:30:29 UTC
From: destree@equinox.unr.edu
Message-ID: <1994Mar6.173029.4718@news.unr.edu>
Source record: 270072

I have a NEC MultiSync 3D monitor from a few years back. Several months ago it lost video. I took it to a local tech who "played" with it, and was able to get video back part way. It is extremely distorted in the horizontal direction, and the front panel controls don't work now. I sent the monitor to NEC. They could fix it, but I feel their $270 flat rate is unfair, and not viable for a several year old monitor. After all, new ones are available for near that price.

So, I had a few ideas I thought I'd try. If there is a tech who is familiar with the NEC 3D or has encountered and sucessfully repaired this problem before, I would be intrested in having it fixed. I would be willing to pay a fair price, but not the outrageous $270 NEC wants. Or if someone has a 3D that is dead for reasons other than what I have described, I would consider buying it to scavenge. Lastly, if someone would be interested in buying my monitor for parts or a project, I am open to offers.

This monitor was (and really still is) a very good unit. I hate to throw it away, but in these disposable times we live in I may have no other cost effective choice.

Thanks!
Louis

: >BTW--how else does one improve a point to point link,
: >besides using bigger antennas and more power?

: Ah, the DXer mentality at work. That's what those guys
: thought too. The only problem was, that wasn't why the
: link was flakey. The real problem was that they had
: established the world's worst exposed terminal in their
: single frequency network, and the link was being killed
: by all the DXer's with 160 watt amps and beams trying to
: make it to their hubs and capturing the link node's receiver.
: It would be held off for minutes at a time by the continous
: collisions.

Actually, if you are forced to do it all on a single
frequency, bigger antennas and more power *is*
just about the only solution (to improve the link).
The more directive antennas would reduce chance of
collisions, while more power would reduce the effect
of a collision. Admittedly, an *ugly* situation. But,
politics makes it difficult to find other frequencies
that are those compatible with radios already in use.

Yes, I know you could modify all the TNCs for some sort
of optimized slotted Aloha protocol, but I doubt this
is really practical.

Getting links on clear frequencies is where microwaves
show their superiority. Not only is it more difficult
to fill the wider bands with wall to wall signals, but
highly directive antennas make frequency reuse more of a
possibility. All that money spent on VHF bricks
might be put to better use on microwave transverters.

I'm pretty sure an analysis of the phone calls I've
recorded would show that its not just DXers who run
beams and amplifiers into their local BBS. I usually
end up spending an extra few minutes explaining that
while a beam results in stronger signals, this advantage
is often eliminated by the extra collisions that result.

I've found that an open wire fed *HF* dipole, even
though it is cross polarized, works a lot better than
an indoor yagi for packet work, because it hears more
stations than the yagi.

>have any advice on how to proceed from here?

No, there is no easy way. My father is a CPA. I've had him set up
3 tax exempt club charters now, one a ham club. The filings to do it
properly are volumnous and the penalties of doing it wrong are severe,
assuming you actually use your tax exempt status to raise money. What
you need to do is to find someone in your club who is a CPA or a
tax attorney and get him to do it. Maybe even pay him something.

If you do this, your club should also incorporate. That is, unless each
member wants to be exposed individually to delinquent tax liability
in the event the club missteps.

UOSAT-2 (UO-11) Celebrates 10 Years Of On-Orbit Service

At 17:59 UTC on March 1st, 1984, the second satellite designed and built by the University of Surrey, UoSAT-2 (UO-11) was launched on a Delta rocket from the Western Test Range at Vandenberg Air Force Base, California.

Among its many experiments, UoSAT-2 carried the Digital Communications Experiment, which was one of the first (if not THE first!) non-military use of store-and-forward techniques with Low Earth Orbiting satellites. UoSAT-2 was an early test-bed for many of the technologies that have since been incorporated into a number of other packet radio satellites.

For all those who wonder how long these satellites last, it should be noted that UoSAT-2 is still operational, ten years after launch!

Happy Birthday UoSAT-2 !!!

KE3HP Presents A "Sample" Keplerian Element Set For RS-15

Based on information about RS-15's orbital paramaeters in last week's ANS bulletins, KE3HP has generated a set of predicted elements for this satellite. KE3HP assumed that the launch would be from Plesetsk at 12:00 UTC on 01-MAY-94. He generated these elements using OrbiTrack, an excellent MacIntosh shareware program by Bill Bard.

Satellite RS-15 predicted
Catalog Number 99999
Epoch 94 121.57362967 05/01/94 13:46:02 UTC
Drag2 0.00000000 Rev/Day^2
Inclination 67.0000 Deg
RAAN 22.8163 Deg
Eccentricity 0.0001152
Argument of Perigee 360.0000 Deg
Mean Anomaly 0.0000 Deg
Mean Motion 10.73887722 Rev/Day
Epoch Revolution 0

Semimajor Axis 8678.14 km
Precession 1.3232 Deg West/Day
Period 134.09 Min
Apogee 2301.00 KM 1429.77 SM 1242.44 NM
Perigee 2299.00 KM 1428.53 SM 1241.36 NM

The only element strongly influenced by the launch date and time will be RAAN. The primary difference is that these predicted elements will show the satellite passing over your QTH at a different time than when the real bird will. If you take these elements and "plug" them into your satellite tracking programs, one of the facinating features that you will discover about this orbit is that even on a low elevation pass (10 degs or less) RS-15 is visable for up to 20 minutes! This will make RS-15 an excellent satellite for Mode A operations. Please stay tuned to the AMSAT News Service (ANS) bulletins for further information about the launch of RS-15.

[The AMSAT News Service (ANS) would like to thank KE3HP for the information contained in this bulletin item.]

AO-13 OPERATIONS NET SCHEDS

HR AMSAT NEWS SERVICE BULLETIN 064.03 FROM AMSAT HQ
SILVER SPRING, MD MARCH 6, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-064.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

13-Mar-94 0130 B 075 VE2LVC W9ODI
19-Mar-94 1730 B 073 W5IU WA5ZIB
26-Mar-94 2130 B 084 WA5ZIB W5IU

Any stations with information on current events would be most welcome. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. If neither of the Net Control Stations show up, any participant is invited to act as the NCS.

AO-13 ZRO Tests For March 1994

The following schedule of Mode "B" tests were chosen for convenient operating times and favorable squint angles. The tests can be heard on 145.840 MHz. Andy McAlister (WA5ZIB) will conduct all the tests. Mode "JL" tests will no longer occur due to the failure of AO-13's 70CM transmitter.

Day Date (UTC) Time Areas covered

Saturday Mar. 19, 1994 1930 UTC NA, SA, Europe, Africa
Saturday Mar. 26, 1994 2315 UTC NA, SA

Note that the dates and days are shown in "UTC". Any changes will be announced as soon as possible via the AMSAT HF and AO-13 Operations Nets.

All listener reports with date of test and numbers copied should be sent to Andy MacAllister (WA5ZIB), AMSAT V.P. User Operations, 14714 Knights Way Drive, Houston, TX 77083-5640. A report will be returned verifying the level of accurate reception. An S.A.S.E. is appreciated but not required.

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

>The entire morse test is multiple-guess! There is *no* relation
>to anything real in the morse test. No smoke, no fire, no screaming
>sailors, nothing.

Ok, so if he just guesses, the odds of coming up with the right answer on 7 of 10 is the odds of picking the right answer at random (1/4) 7 times (1/4 ** 7). or about 1 in 16384.

>Seriously, I was astounded at the low level of comprehension
>required in the 13-wpm test I took. I had slaved for a month to be
>sure I could tell "FT-100" from "FT-101" in the middle of a qso.
>Then I take the test and the questions are "Rig is: A: Yaesu B:
>Icom C: Kenwood D: Heathkit."

if you really copied the text, you breezed through it and were out of there. the folks that didn't copy so well are spending minutes trying to decide if they copied Kenwood or Collins or was that Heathkit or Hallicrafters?

>Of course you should be allowed to use your keyboard. Sheesh.
>-Steve N2WSA

and you certainly can. but best to contact the VE group in advance to let them know you are coming. in our case here, the rooms we usually have to use have desk chairs, not separate tables and chairs or other furniture that keyboarding would be a comfort on.

2628. Information needed on Tandy 4000 computer

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-06 22:03:31 UTC
From: twright@freenet2.scri.fsu.edu
Message-ID: <2ldjvj$7f9@freenet3.scri.fsu.edu>
Source record: 269979

Well first off it has a 3 1/2 and a 5 1/4 floppies and the min of
a 40 meg HD with a EGA monitor. I paid $25.00 for it. Heck the case
is worth $50.00 just to build one.

I powered it up and it booted perfectly. The monitor has full rapture
on it before the CPU was powered. After the CPU booted using DOS 5.0
the monitor was showing three boot up listings along with 3 C> promts.
These 3 columns (sp) are over lapping and 2 of the 3 promts were fuzzy
and only one was clear but it all still over lapped.

I installed Super Morse off of a 3 1/2 and then again off of a 5 1/4.
both floppies work perfectly as well as the Hard Drive. The SM program
did like the boot up all overlapping. I then installed a game called
Space Quest II and the monitor cleared right up and the system ran
perfectly. I reinstalled SM and the Monitor went back into the over
lapping letters. I connected the monitor to another CPU and it worked
perfectly again. So this rules out the monitor.
I am suspecting that the problem lies in the video driver cmds in the
DOS 5.0 system program. What brings me to think this is that a game
has its own program to run the game which carries its own video driver
commands.

If some of you computer experts out there either agree or disagree
PLEASE let me know. I want to get this machine up and running on
Packet A.S.A.P.

Thanks a bunch

2630. FCC Exec fired for incompetance?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-06 23:27:25 UTC
From: keating@nosc.mil
Message-ID: <1994Mar6.232725.14061@nosc.mil>
Source record: 269981

Hello.

My original source read this posting and contacted me; one of us misunderstood. The agency involved was not the FCC, but the FAA.

Read the actual story about the FAA in: clari.news.aviation or your newspaper.

PS, some folks responded by email indicating that they had not heard it but didn't find it surprising given the degree to which the FCC is out of date with its computers. :)

Roger Keating

LANDLINE BBS OPEN TO ALL 916-262-1657
RACESBUL.316 RELEASE DATE: March 7, 1994

Subject: MGT - Semantics, 6 of 7. The ACS.

AUXILIARY COMMUNICATIONS SERVICE: The name adopted by those jurisdictions who have chosen to use a wide spectrum of volunteer telecommunication experts and other workers in government service. This might include commercial radio technicians and engineers, the RACES, Civil Air Patrol communicators and other unpaid professionals. In some jurisdictions it includes public safety and government communications as well as liaison with any agency that has a bearing on emergency response.

An ACS has four elements in which interested volunteers serve according to their skills and interests: administrative, clerical, operations, and technical. In our State ACS we have radio operators, heavy equipment operators, tower climbers, computer disk message writers, messengers, photographers, pilots, electricians, generator mechanics, computer programmers, plan writers, instructors, EBS specialists and radio announcers, personnel records management, clerical help, managers, shift supervisors, installers as well as communications and electronics technicians. Again, the RACES is but one part of the Auxiliary Communications Service. The ACS is a broad spectrum service to government supplementing all aspects of emergency response communications, not just operating radios in the field or at an EOC which has been considered by some to be the only role of the RACES.

(This is part of a series originally titled "From My Lookout" in seven parts, by Stanly E. Harter. It was renamed Semantics for these bulletins. Continued)

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races and can be retrieved using FTP.

Well - I am not sure if others do use SASE although I often here the
expression self-addressed stamped envelope - primarily on TV or something.
Green Stamps of course go back to the old Blue Chip and S&H Green Stamps
given out at grocery stores and other markets which could later be traded
in for various items in an S&H Green Stamp *department store* or whatever
they were. I presume those outfits are all out of business by now.
Hmmmm - maybe Hams are the only ones using these espressions.

Derek Wills (oo7@astro.as.utexas.edu) replies:

> I can't see this catching on - giving 5 numbers for a signal report,
> ack!

Agreed, especially if the report is merely an adminstrative formality required for your contest log or DXCC application. Every once in a while I wonder how my signal is *really* getting out, however, and I simply intended to comment that I'd find a SINPO report much more informative than an RS(T) report under these circumstances.

> 599 means "you're loud", "this is a contest", or "I need your QSL
> card", 579 means "you're pretty strong but I'm not giving you a
> routine 599", and 559 means "you're weak". Anything else is just
> pretentious.

You may be onto something, Derek. Maybe the county hunters are on the right track, and what we *really* need for most purposes is a 1 by 3 scale. ;-)

BTW, under 599 you left out, "We're up to our knees in penguin guano, freezing our butts off on a frigid little rock in the Antarctic circle, and have neither the time nor inclination to even *think* about the quality of your signal. In fact, our computerized logging system doesn't even have a place to enter a report, since the software we'll use to generate your QSL will insert a 599 report automatically."

Hi,

My homemade QRP xcvr has a 600 Hz BW xtal ladder filter consisting of 4 12.0000 MHz xtals. However I still find it hard to work pile-ups due to insufficient selectivity. I am planning to change it to 400 Hz. Does anyone know how much improvement I can expect to see? Also, how can this be done in the easiest way? Do I need to add xtal stages or just change to capacitor values?

72 es 73,
Daniel

Article 4:
Letters To The Editor

From: Larry Kollar
E-mail: larryk@computone.com

Pretty good newsletter this issue! (vol 5 no 1/2 -ed.) It was particularly interesting since I was just trying to remember when the child labor/factory hours laws were passed (I was thinking 1820s, not late 1840s).
One piece, however, jumped out as being not quite right:

"In the tradition of Amateur Radio and Citizen's Band Radio, Usenet News is the product of the users' ideas and will. Unlike Amateur Radio and CB, however, Usenet is owned and controlled solely by the participants."

I made that connection as well a few years ago, thinking that computer networks might be this generation's amateur radio. But I'm not sure that one can say that Usenet is "owned and controlled solely by the participants," while amateur radio and CB are not. In the sense that government and international bodies determine what portions of the radio spectrum the medium of communication are allocated to the two services, that's true. However, the Usenet participants that own the computers, modems, disk drives, and so on do not own the medium of communication (leased lines and telephone networks) either.
In both radio and computer networks, one need only buy the equipment needed to connect. In the case of amateur radio, however, one must also pass a series of exams designed to test the participant's knowledge of theory and regulations. In return for passing these exams, the amateur radio operator (or "ham") may:

- Use higher power levels (up to 1000 watts) if needed for reliable communications.

- Operate in modes unavailable to CB (or many commercial) users. For example, the amateur packet radio network uses TCP/IP and is available worldwide; there are several e-mail gateways between ampr.org (the packet network) and the "normal" Internet. Some segments of the packet radio network use Internet "wormholes" and amateur radio satellites (or OSCARs) to move traffic around the world.

- Use a wider range of frequencies for local or international communications. Some amateurs are experimenting with high-speed data links (as fast as T-1, or 1.5 million bits per second!) on the microwave frequencies, for example.

- Build and operate equipment that is not FCC type-accepted. The same homebrewing spirit extolled in ACN remains strong in the amateur radio population.

Amateur packet radio is a godsend for me. I live outside the Atlanta direct-dial area, and accessing BBSs from home means running up long-distance phone charges. Using packet radio, I bypass the traditional "landline" BBSs and connect directly to a packet BBS over the air. (I get on Internet at work.)
As amateurs are expressly forbidden to use their frequencies for commercial traffic, the packet radio network is even more grass-roots than Internet! As the equipment becomes available to more users, the packet visionaries are talking about many of the same things as the Internet visionaries, such as digital voice (and video) links. The two networks will continue to develop in parallel for some time but if commercial interests kill further Internet development (unlikely IMHO), the amateur packet network will continue forward.
The person you mentioned in ACN who is sending e-mail to the MIR space station is using amateur radio; most of MIR's cosmonauts are hams and occasionally make voice contacts with people on the ground in addition to running the packet mailbox almost constantly. The USA's Space Shuttle often flies a mission, called SAREX for Shuttle Amateur Radio Experiment, that connects Shuttle astronauts to school children (among others) via voice and packet radio links. MIR and Shuttle missions have both used their amateur gear for reliable backup communications when normal mission communications channels went down temporarily. CB, on the other hand, provides the security of millions of users. Any commercial interest trying to take over the CB frequencies would be jammed to death. :-) Amateur radio's highest frequencies are used only lightly (so far) and there is a good bit of commercial pressure to reallocate those bands. It has already happened in one case, but that's another story.
I've rambled on long enough. Keep up the good work!

Getting PGP will not solve the problem. I feel our government intends to:

1. provide a somewhat viable encryption standard with a govt backdoor.

2. pass laws which make it illegal to use non-govt sanctioned encryption.
(after all, if you are innocent, what do you have to hide?)

The problem cannot be resolved by getting a backing for PGP (or your favorite
encryption algorithm), but by supporting the idea that (real) encryption
should not be an illegal activity.
The government has the ability to get virtually every piece of private info
you have (via wiretap, access to financial data, warrants, lock picking
abilities, etc.) but with the advent of cheap processing, anyone can now
lock information and the Government can't pick the lock.

The standard argument has always been '...in the national interest...'
The question becomes:

"Do we really want to give up the last sanction of privacy left to us?"

This is where I believe the real issue lies.

Mick

Grounding the fence may not help. An electric fence (of the conventional kind) can be thought of as a capacitor which must be kept charged. The "pop" noise (about every second) that we sometimes hear is the harmonic energy in the steep waveform needed to charge the capacitance of the fence wire. If there is a fault (such as grass or other material touching the wire) the thing will radiate the more effectively.

"Rural" hams know about this problem.

SYNOPSIS OF ACT

SUMMARY COVERS THE PERIOD FROM 05/2100Z TO 06/2100Z:

Solar activity was low. An optically uncorrelated C2
x-ray event was recorded at 06/1237Z. Region 7682 (S19W81) has
declined in area and spot number and produced no activity this
period. Regions 7680 (S11W29) and 7685 (S08E09) were the most
active producing numerous B-class/SF flares. Two new regions
were numbered this period: Region 7686 (N08W46) and Region
7687 (N18E16). Since appearing on the disk, both new regions

have shown white light growth. All other regions are quiet and stable.

Solar activity forecast: solar activity is expected to be very low to low. Regions 7685,7686, and 7687 all have the potential for producing C-class activity.

The geomagnetic field has been at mostly quiet to unsettled levels the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be mostly unsettled to active for the next three days with minor storm conditions expected at high latitudes on days two and three.

STD: Levels of geomagnetic activity have increased to active levels just prior to the release of this report (early on 07 March). It would appear that the coronal-hole related disturbance has arrived. Minor storming has been observed over many high latitude sites over the last 3 hours (07/00Z to 03Z). Levels of auroral activity have likewise increased with only a slight equatorward migration of the northern oval apparent at the present time. Local night-sector substorming should produce moderate levels of auroral activity over the next several days.

Event probabilities 07 mar-09 mar

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 07 mar-09 mar

A. Middle Latitudes
Active 20/25/25
Minor Storm 15/25/30
Major-Severe Storm 10/15/15

B. High Latitudes
Active 25/30/35
Minor Storm 20/30/35
Major-Severe Storm 10/20/20

HF propagation conditions were normal over all regions. Some regions experienced notable enhancements in both signal quality and MUF. Conditions are presently (early on 07 March) beginning to wane, with poor propagation being observed over some high latitude sites. Poor to very poor propagation is expected over the next 48 to 72 hours on transpolar and transauroral circuits. Middle latitudes should see good to fair propagation with occasional night-sector poor propagation.

No improvements are expected for at least the next 48 to 72
hours.

Total Events: 007 optical and x-ray.

EVENTS WIT
------------------------------------------------------------

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

As you may know GARC volunteers undertake to retransmit Shuttle Ground transmissions. Please note the following:

INTERESTED IN SHUTTLE TRANSMISSIONS
The Goddard Amateur Radio Club (GARC)invites interested people to tune in to Shuttle transmissions. As a public service to the Amateur radio community, the GARC retransmits space shuttle air-to-ground communications. During the STS-62 mission, Amateur radio operators, shortwave listeners, and those individuals with scanners can listen to these communications on the following HF (single side band) and VHF frequencies:

3.860 MHz (lower sideband)
7.185 MHz (lower sideband)
14.295 MHz (upper sideband)
21.395 Mhz (upper sideband)
28.650 Mhz (upper sideband)

and

147.45 Mhz (FM) Local DC Metro Area

2648. TS830M + CW narrow. Possible?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-07 11:58:59 UTC
From: fax%sparc4@Olivetti.COM
Message-ID: <9403071159.AA07706@sparc4.ICO.OLIVETTI.COM>
Source record: 270025

Hello,
I'm wondering if anybody can help me. I'd like to install a CW narrow filter
on a Kenwood TS830M although the factory says that it's not possible.
I don't care doing it in the hard way even putting a switch in the rear
panel or doing some mods on the board itself but I want to hear from
someone who attempted this before to be sure that it's feasible since I
still have to buy the rig.
The more info you guys can give me the better it is.

Thank you!
Marco

146.675 MHz (rtty mmbbs/repeater) VK2RTY

Views expressed in this news bulletin are not necessarily those of the Broadcast Officer, the Relay Officers, or of the Society.

Well, did you see us at the Central Coast Field Day? We were on the top floor of the stand if you could not find us. I believe this happened to other clubs whose displays were on a lower floor last year. Shall suggest to the host club that a location board be displayed outside the stand main entrance so that all club stands can be found more easily next year. It is a great location, spacious outlook, but I suppose it is a bit hard to get past the refreshment floor, hi hi.

The winner of the Morse Contest held on the ANARTS Stand at Wyong last Sunday was VK2IC (he sounds more like a computer specialist than a practitioner of the Ancient Art of Morse Code). He had two errors in sending and one in receiving. He was the proud and pleased recipient of the prizes : the President's Bottle(s).

All in all, the day appeared to be a great success -- did you meet the IPS team ? There were four on deck during the day. I am looking forward to seeing the attendance figures for the day. With this new venue, the attendance seems to be spread out more, or is it just because there are more places to look for people and stands.

We look forward to next year and seeing you all again.

BARTG Contest

Date: March 19-21 1994, sponsored by the British Amateur Radio Teledata Group.

Exchange: Send: RST + QSO number + time in UTC.

Multipliers: Each DXCC country, including first QSO with W, VE and VK, counts as a multiplier on each band. Each call district in W, VE and VK will count as an additional on each band. Also, each continent (6) will count once, not once per band.

QSO Points: Count 1 (one) point per QSO.

Final score: Total QSOs x total multipliers x number of continents (max 6).

Logs: Use separate logsheets for each band. Logs must show: BAND, DATE and TIME (UTC), CALLSIGN, MESSAGE Sent and Received, COUNTRIES and POINTS claimed.

Summary sheet must show full scoring, times of operation, and address for correspondence.

Logsheets, summary sheets and multiplier and dupesheets are all available for copying from the RTTY Contester's Guide, published by RTTY Journal.

Deadline: Logs must be received by May 25 to qualify.

Mail logs to:
BARTG c/o John Barber, G4SKA
32 Wellbrook Street
Tiverton, Devon
EX165JW, England

Have fun!

IPS weekly report

24 FEBRUARY - 3 MARCH 1994
Issue No 09
Date of issue: 4 March, 1994

INDICES:
Date 25 26 27 28 01 02 03
10cm 097 094 095 093 094 098 101
A 12 06 06 09 10 17 (17 estimated)
T 71 27 55 57 47 73 64

SUMMARY OF ACTIVITY

Solar activity was very low 25th-26th and 28th February-1st March, moderate on 27th, and low on 2nd-3rd March. There was an M2 flare on 27th february.

The geomagnetic field at Learmonth (WA) was quiet on 27th, quiet to unsettled 26th, 28th-3rd March, apart for a period of minor storm activity on 3rd.

Ionospheric F2 critical frequencies at Sydney were uo to 20 per cent above predicted monthly values on 25th, near predicted levels on 26th, near predicted with enhancement periods of up to 30 per cent on 27th-1st, and enhanced 10 t0 15 per cent on 2nd-3rd March. Sporadic E may have degraded F layer communications at times on 1st March.

FORECAST FOR THE NEXT WEEK (4 -10 MARCH)

SOLAR: low

GEOMAGNETIC: active-minor storm periods expected March 4-9, due to a solar coronal hole.

IONOSPHERIC: degraded HF comms expected March 4-9. Depressions of up to 20% may be experienced at times during this interval.

The following is a QST

The FCC takes another step toward the electronic filing of license applications.

*****
PRB SIGNATURE

The FCC's has taken another step toward an eventual start-up of an all electronic filing system for radio licenses. This, with an announcement by its Private Radio Bureau of the adoption of procedures to govern the signing of electronically filed private radio service applications.
Last April, the commission amended its rules to permit the electronic filing of applications for PRB governed services but the agency also continued the requirement that handwritten signatures accompany all applications until the Private Radio Bureau establishes guidelines for accepting the electronic filing of applications. The bureau is currently developing these

procedural requirements with some already in place. So far on an experimental basis at least 7000 licenses applications already filed by electronic means.
The signature procedure that the Private Radio Bureau has now adopted is quite simple. It states that if the applicant is an individual then the signature on an electronically filed must consist of the electronic equivalent of an individuals typed name. In a partnership, it will be the electronic substitute of both partners names while for a corporate entity the signature must be the electronic equivalent of the typed signature of an officer, director or duly authorized employee.
An electronic signature submitted according to these new guidelines will designate the individual authorized to bind the applicant who is certifying to the accuracy of the information contained in a given application. By signing electronically, all applicants agree to comply with the terms of the Communications Act and the rules governing a particular radio service in the same way as if they has submitted a hand written signature on a printed application form.
What does this mean for ham radio? Simply that the legal framework is now in place for electronic signatures to be accepted by the Private Radio Bureau. It also means that the start-up of electronic filing of Amateur Radio applications and a shortening of an applicants waiting time for an applicant to get on the air can't be all that far away.

*****
CMRS

The FCC has established a new procedure whereby license holders in the private land mobile radio service who are subject to reclassification into the commercial radio service can file for a waiver to retain existing foreign ownership. Under the framework of the 1983 Omnibus Budget Reconciliation Act, certain private land mobile radio license holders were re-categorized as common carriers and are now subject to foreign ownership restrictions as outlined under section 310 B of the Communications Act. Section 310 B prohibits the granting of common carrier authorization to any alien or representative of an alien or to any corporation that has been organized under the laws of a foreign government. It also bars any corporation where any officer or director is an alien or which has more than 20% of its capital stock own by non-citizens or their representatives. The budget act does allow those affected by the change in status to petition the FCC for a waiver of Section 310 B as long as the foreign ownership interest lawfully existed prior to May 24, 1993. If a foreign ownership waiver is granted, the FCC says that it will recognize only the particular person or entity that held the foreign ownership interest as of the May 24th 1993 cutoff date. Subsequent transfers of these grandfathered foreign ownership interests will be limited to domestic persons or

entities so as to keep the waiver valid and in effect.

*****
VOICE MAIL HACKERS

Pacific Bell Telephone in San Ramon, California says some of its voice mail customers are getting an unpleasant surprise. The company is admitting that electronic hackers are breaking in to the voice-mail system that it runs for business and residential customers. The hackers have altered message greetings and changed pass words. One recent incident happened earlier this week when a woman found a stranger was using her voice-mail box. Pacific Bell's corporate security and various San Francisco area law enforcement agency are investigating these incidents. In California, breaking into and tampering with a voice-mail system violates state law.

*****
CUBA AND THE ARRL

Cuban American hams are angrily denouncing ARRL acceptance of an invitation for United States hams to join their Cuban counterparts in future operating events. They are making their displeasure known on voice, on CW and on packet.
The crisis began after the league issued an official bulletin saying that the Cuban national society had invited American amateurs to participate in a joint operation in the 1994 ARRL June VHF QSO Party. It said that ARRL Oklahoma Section Manager Joe Lynch, N6CL, received the invitation to lead the group during his visit to Cuba the week of February 7th.
Lynch, who is also the VHF editor of CQ Magazine was in Cuba as a member of a Methodist Church work team. While there, he extended greetings from ARRL officials and presented Federacion Radioaficionados de Cuba President Pedro Rodriguez, CO2RP, with a certificate of participation for the June 1993 ARRL VHF QSO Party. Joe also presented an author's certificate to Arnie Coro, CO2KK, for his article in December 1993 issue of the League's QST magazine.
But many Cuban expatriate hams living in south Florida say that Rodriguez is nothing more than a puppet of Cuban Dictator Fidel Castro. They claim that Rodriguez is a member of the Cuban military who was given a ham call sign and a new political job. The job of keeping Cuban hams following the Castro party line. This they say at the risk of loosing their ham radio privileges and possibly going to jail.
The Cubans hams living in the United States say that hams outside Cuba should not be holding hands with the FRC. Instead they should be pressuring their national societies to force the FRC to loosen the reign that dictator Castro has placed on the Cuban ham community.
If it does take place, the joint VHF operation will place

from Bellomonte, Cuba. Officials of the FRC say they have also taken under consideration a proposal from an American group for a joint operation from Cuba on the High Frequency bands in 1995.

*****
DAYTON BANQUET

On a lighter note, the planners of the 1994 Dayton Hamvention have announced that a broadcasting pioneer will serve as this years featured banquet speaker.
The 1994 Dayton Hamvention Committee has selected the featured speaker for this years grand banquet. Joseph M. Costello III, WA5HSI, President and CEO of WRNO International will present the main address at this years banquet. Mr Costello is best known for promoting the licensing and establishment of a US commercial shortwave station. Mr. Costellos perseverance has thrust radio station WRNO into fore front of shortwave broadcasting. The grand banquet will be held Saturday evening April 30th at the Dayton Convention Center.

*****
QSO PARTY

In the contest corner, the 1994 Wisconsin QSO Party is scheduled for 18:00 UTC on March 13th. It runs until 01:00 UTC on March 14th. Send your entries and logs to WARAC, P.O. Box 1072, Milwaukee, Wisconsin 53201.

*****
MALTA

In DX, you may have noticed that the 1A0KM, Sovereign Military Order of Malta DXpedition scheduled for February was postponed. According to word from I0JBL, the scheduled activity from the area was put on hold because of some serious problems that occurred to two of the four operators. There were no details given but it is assumed that most DXers were focusing most of their attention on the Peter I Island DXpedition. The 1A0KM operations are now scheduled to begin shortly. In fact, the group may be on as we go to air.

*****
RS-15

Also from overseas comes word that there has been a delay in the setting of a launch date for Russia's new RS-15 ham radio satellite. Sources close to the project now say that the official technical presentation before the Russian Space Agency has been delayed until at least March 20th.

*****
WARD

Congratulations to the new DOCTOR Jeff Ward, K8KA/G0 who recently earned his Doctorate degree. Jeff has been instrumental in the design of not only OSCAR satellite hardware, but also the ground station software that is used for Pacsat type communications. His work has had a great impact on the emerging micro satellite and digital communications technologies as well.

*****
SPACENEWS

Word that KB2DB's "SpaceNews" is now available by satellite! The distribution of John Magliacanes' "SpaceNews" ham radio newsletter via Amateur Packet Radio networks has been improved recently with the help of high-speed "Pacsat" satellites. These polar orbiting satellites now make SpaceNews available to every inch of the planet several times daily at 9600 bps. W3QNS uploads copies of SpaceNews to the KITSAT OSCAR-23 satellite and is making them available for all KO-23 users.

*****
HELP FIND MARTY

We have a special request from our producer Bill Pasternak, WA6ITF to try and help him to locate a boyhood friend who he says is trying to find him. The person that Bill is trying to contact is Martin Schiff, the former K2TRU. Bill says he learned that Marty was looking for him when he ran into a non ham cousin at a recent family gathering.

"I was more than a little surprised when I was in New York not long ago I ran into a cousin, who I haven't seen in 32 years, who told me that a friend of mine, who I haven't seen in about 34 years, has called him, surprisingly, and asked to get in touch with me. My cousin did not know where I was at the time and had no way of contacting me, so he threw the piece of paper away. He really doesn't remember where Marty Schiff, ex-K2TRU is living." Bill Pasternak, WA6ITF, Editor of Newsline.

According to Bill, he and Marty Schiff palled together in the late 1950's and into the early 1960's. He says they lost contact after Marty went off to college somewhere in the north-east. Possibly to MIT.

"Well the last time I saw Marty was a couple weeks before he went of to college. He went off to an engineering school as I remember some place in the northeast. It could have been MIT. I am not a hundred percent sure. This would have been back in 1960 I guess, 59 to 60 something like that. I did try to contact MIT, both the Registrars Office and the Alumni Association, but I have had very little luck.
Also tried the radio club and some friends of mine in the Boston area and other states and nobody seems to know Marty. But I've got a feeling if he is still around electronics, he's around

radio people and even though he is not listed as holding a call
sign right now. There is a good chance he has got some friends
who are hams.
I have exhausted every other method of trying to find him
short of flying back east and starting a house to house search,
so it occurred to me possibly one of our listeners here on
Newsline might know him and might put me in touch with him."
Bill Pasternak, WA6ITF, Editor of Newsline.

If you happen to know someone named Marty or Martin Schiff
and if he is originally from West 8th Street in Brooklyn, New
York, let him know that Bill Pasternak, the former WA2HVK is now
WA6ITF, that he is living in California and can be reached at
area code (805) 296-7180 on voice or fax, 24 hours a day.

*****
And for this week, that's all from the Amateur Radio Newsline.

2651. Mini antenna response summary

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-07 13:47:49 UTC
From: wy1z@netcom.com
Message-ID: <wy1zCMArnp.6Fv@netcom.com>
Source record: 270000

Thanks for all the suggestions.

The overwelming response was to get the Comet CH-32 Mini antenna (1.75 ").

Price is ~$34

My check went into the mail this morning to HRO.

Again, thanks.

Scott

: change it to 400 Hz. Does anyone know how much improvement I can
: expect to see? Also, how can this be done in the easiest way? Do
: I need to add xtal stages or just change to capacitor values?

You probably won't see any improvement in the pileups. I am assuming that lots of stations want to work Singapore (9V1 for DX types). Problem is, most are probably calling on the same frequency (within 100 Hz), so a tighter filter won't help.

What will help is to have an RIT control and continually vary your frequency receive frequency over a narrow frequency range, perhaps a kHz or two.

However, 12 MHz ECS clock crystals sold by Digi-Key do make nice Cohn filters. Use 3 crystals and 470 pF capacitors. The input inpedance and output impedance just happen to be close to 50 ohms. (Some people just get lucky). Cascading two of them, I got a 3 dB BW of 379 Hz and a 6 dB BW of 427 Hz.

Finally, since you asked, adding more filters will improve the skirt selectivity, making stations out of the passband weaker. 4 crystals is probably OK for a CW rig, though I use 6 in one rig and 7 in another. Increasing the capacitor values will decrease the bandwidth, but will also decrease the impedance. Impedance matching is important to maintain the proper filter shape.

Worked PY0FM and 6Y5IC yesterday during ARRL SSB DX contest. Anyone
know:

1) PY0FM - which island group, and how to get a card?
2) 6Y5IC - any special route to get a card?

Thanks everybody!

-->In article <2MAR199408091550@nssdca.gsfc.nasa.gov>, stocker@nssdca.gsfc.nasa.gov (ERICH FRANZ STOCKER) writes:

-->At our VE sessions we always check the copy whenever the applicant fails
-->to answer 7 questions correctly. We once has a case where someone got only
-->6 correct but had sufficient copy to pass and had correctly copied the
-->answer to one of the questions not answered! There is nothing about this
-->test which implies _______ (fill in the blank).
-->Now don't get me started about the multiple guess test.
-->
-->Shel Darack WA2UBK dara@physics.att.com
-->

We do the same, however in all fairness we believe that if the
applicant wants to submit for 1 minute solid copy, he must do
so *before* getting the multiple choice test. This is because
many words in the exam answers are in the text (obviously).
The candidate can then back-fill his copy sheet. Then he
really did not *copy* that stuff from the cw qso.

Once he gets the multiple choice test sheet, I feel that the
candidate should not be allowed to submit his sheet for 1
minute copy. In the case of 5wpm, there are only 25 words
in the 5 min QSO.(+/-) When you give him the test sheet, you
just gave him at least 10 of the words!

2655. Re: Honda ignition recall - now NOISE!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-07 15:12:20 UTC
From: RONALD.E.REDER@OFFICE.WANG.COM
Message-ID: <199403071612.AA16405@tuna.wang.com>
Source record: 270003

baxter@kuhub.cc.ukans.edu (Kirk Baxter) writes:

>I had this recall work done on my car a couple of weeks ago, and now have
>terrible ignition noise on 2 meters and 440.

My condolences. As the owner of a fuel-injected 89 Accord, I've been living with
this same problem for 5 years. Your posting was a big help because it points the
finger at the igniter. I've tried ferrites on cables and grounding the hood to the
body with little effect. Now I have something else to work on :-).

According to my shop manual and electrical manual, the igniter is a
solid-state module, mounted on the distributor, which acts to control current
in the primary of the ignition coil. In other words, it is the solid-state
equivalent of breaker points.

I can only assume that your new module has sharper switching edges or a higher
breakdown voltage than the old one and is creating more RFI because of this.
There is a suppression capacitor in the circuit, but it has quite long leads.
In fact
the coil primary circuit on my car runs from the coil to the distributor and is
separated by about 2 feet of cable. Probably makes a fine antenna. Ferrites on
the cable didn't seem to help, but I'll probably try it again. This is not a
piece of
circuit I want to mess with very much. Placing additional capacitors and such
in the circuit might lead to poor ignition performance or igniter failure.

One piece of good news is that the interference is awful just after a major
tune-up and fades gradually over the next month to a much lower level.
Perhaps they replaced the igniter as part of some of my tune-ups.
I'll have to pull my service slips and check them.
My guess is the igniter degrades with time either from the high temperatures
or the high voltages. With any luck you will also encounter this phenomenon.

Ron

2656. Macintosh Ham Radio Software 1.0.6 - 3/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-07 16:01:58 UTC
From: Terry Stader <p00489@psilink.com>
Message-ID: <9403071601.AA22053@worldlink.worldlink.com>

Macintosh Amateur Radio Software - March 1994
Version 1.06

Please feel free to distribute this list as widely as possible. Many of you have asked if it is OK to cross-post this list? I don't mind, but I would like to know where it is going. If you think it should be cross-posted to other USENET groups, please let me know so I can try and manage these. We don't want to have any duplication or our welcome will be wore out! I will also try and honor individual requests for this list... but I do not always catch all of the newsgroups postings... so please DO NOT reply/ask there! If I am a little slow in getting the list back to you... hang in there!

Those of you that can tell me about ANY of these programs compatibility with System 7 would be appreciated! I am going to be adding a System 7 compatability section to EACH description in future releases. If the application is KNOWN to execute properly under System 7, the System 7 anotation will be placed as the last line of the product description. More clarification on levels of System 7 compatibility in the future editions... but this is a start!

Some of the information in this list was gleaned from flyers supplied by the software vendors, or in some cases from reviews in amateur radio publications or the README files included with the archive. Some of the information has not been verified for a long time; please check with the vendors/authors for the latest product specs, pricing, etc.

NEW/CHANGES: A new group has been added... that of WEFAX. Although some of the software currently available supports this mode, RadFax is the first to be listed as the only function of receiving waether facsimille.

I've started adding more version numbers so that our users will know if they have the most current release. Thanks to those that have already sent them in... I'll accept all corrections!

This list contains info on updated for several applications: updated information on Kantronic's Host Master(thanks John-WD1V) and Lar's newest release of Morse Trainer 1.1.1. Ivo-ON1XK and Adam-PA2AGA both contnue to be busy with new releases of IM/Mac and NET/Mac repsectively. I know that Adam made changes to support the multiport serial boards... and now we can have up to 16 TNCs connected!

Thanks Adam, Ivo and Lars for some great products!

A reminder that The World Software Tool and Dye, is one of the newest site carrying the Mac Ham Radio Software. Scott-WY1Z is maintaining these file as the Librarian of the Boston Amateur Radio Club. Look in the following path at ftp.std.com: /pub/hamradio/mac.

Check at the bottom of this list for more information on ftp'able sites carrying Amateur Radio software.

The ARRL ListServer is also carrying the latest version of this list... in case you loose this one!

*** Collections ***
<MacNet v5.31>
Join MacNet and get included in the latest version of "Macnet Roster", a HyperCard 2.x stack that now has > 400 members and is the proverbial "Who's Who" of hams using Macs. You'll find "Macnet Roster" a great tool for finding out who, what and how other hams are using their Macs with their ham stations. It even includes this file!
Send $30.00($40.00 DX) check or money order to: WD1V, John Seney, 144 Pepperidge Drive Manchester, NH 03103 USA.
All disks shipped First Class Mail PPd. Get the COMPLETE Macnet Software Collection ppd. on 10 disks!
Based on your interests, you'll also receive public domain shareware received by our members.
System 7

<Project Mac>
Contest logging, antenna design, satellite tracking, clip art, etc. Microsoft BASIC required for many of the programs. Most of this software is now available in the MacNet collection. Send three formatted 800K Macintosh disks with stamped, self-addressed disk mailer to Stan Horzepa, WA1LOU, One Glen Ave., Wolcott, CT 06716-1442. Stan can be reached at horzepa@gdc.com
NOTE: Stan has indicated much of this software is "old" and may not work on some newer Macs. Also he notes that most of his collection is available in the MacNet collection above. He will send anyone what he has if you send him the disks and SAS mailer.

<Amateur Radio Software for Macintosh>
Extensive catalog including logging, Morse code, gray line, test preparation, satellite tracking, contesting, and packet radio programs.
ZCo Corporation, P.O. Box 3720, Nashua, NH 03061. NOTE: This company has been rumored to be out of business!

<Amateur Radio #1>
Contains satellite tracking, Morse code, attenuator design, and Ohm's law calculator programs. Kinetic Designs, P.O. Box 1646, Orange Park, FL 32067.

*** Test preparation ***
<Ham Test Stacks>
HyperCard stacks containing the entire question pool for each license class. Can be used for preparation or generating actual tests. The current releases are: Novice v4.1(new questions eff. 7/1/93), Technician v4.0(new questions effective 7/1/93), General v2.4, Advanced v2.4, Extra v2.4 If you wish to receive these PUBLIC DOMAIN stacks, please send a SASE (self addressed STAMPED envelope - 2 ounces postage = .52) and 800K diskette to the author: Diana L. Carlson, 3 Spruce Street, Hudson, NH 03051. Diana will no longer send out the stacks unless the envelope has sufficient postage for return mail (in general, that means .52-.98, depending on size of envelope) and for those who send a standard business envelope, she takes no responsibility for the condition of the diskette through US mail. Available via anonymous FTP from various sites, including uxc.cso.uiuc.edu (/pub/ham-radio). NOTE: The newest releases of Novice and Technician stacks are available at uxc.cso.uiuc.edu (5/6/93) Author is available via Internet: dls@genrad.com
System 7 savy with HyperCard 2.1

<MacHam>
Test generators and study aids for the Technician, General, Advanced, and Extra class written elements. Includes the complete question pool for each license. Hypercard based.
Coyne Co., P.O. Box 2000-200, Mission Viejo, CA 92692.
System 7 with HyperCard 2.1

*** Morse code practice ***
<N6MZV Morse Trainer>
Lets you practice any combination of letters, numbers, and/or punctuation characters. Can send user-created text files.
RT Martin, N6MZV, 10382 Orange Avenue, Cupertino, CA 95014. Also available via anonymous FTP from ftp.apple.com (/pub/ham-radio).
Shareware.

<Morse Code Tutor v1.6> - used to be called Morse Tutor
Sends random groups of letters, numbers, and/or punctuation characters. Available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Or send formatted 800K Macintosh disk with stamped, self-addressed return disk mailer to Jack Brindle, WA4FIB, 726-175th Street SW, Bothell, WA 98012; Compuserve: 73365,606.

<MorseMania V1.0>
Designed for those already familiar with Morse code who want to improve their speed. Allows code practice at various speeds and audio pitches. Can generate random sequences or play the contents of user-created text files. Freeware. Available via anonymous FTP from whirlwind.stanford.edu (/pub). Contact Edward Plumer, KM6IQ, for more information; Internet: plumer@isl.stanford.edu.

<MacMorse>
Randomly sends chosen characters. Lets you create your own practice

files. David A. Kall, 700 Marine Parkway #314, New Port Richey, FL 34652.

<MacMorse v1.3>
MacMorse is designed to help you learn Morse code and improve your receiving speed. It has several ways that it can send letters and punctuation. Shareware. Doug Havenhill, Dynamics and Control, 7143 West Sunnyside Drive, Peoria, AZ 85345.

<MacSamuel>
Sends random words, random character groups, and user-created text files. Can also create simulated QSOs with randomly generated text and callsigns. Avant Systems, P.O. Box 5437, Pittsburgh, PA 15206.

<Zihua Morse>
Designed to teach Morse code to beginners and to improve the accuracy and speed of advanced users. Responses can be typed into the computer; the program will calculate accuracy and timing statistics for each session. Optional speech synthesizer reads the characters out loud for an accuracy check. Zihua, P.O. Box 51601, Pacific Grove, CA 93950.

<Sparks-II v2.0.5>
More Code training program. Available for anonymous ftp at rahul.net /pub/davidj/radio

<Morse Master v1.0>
The newest of the morse code training programs. MM calculates the real speed as follows: Real speed = Number of Words/end time - start time. And the lengh of word is generating randomly, so if you set even 5WPM, sometimes another value will appear. However you should believe the slidebutton's value. If you repeat many times, the average speed should be 5WPM (if not... anyway, believe the slidebutton's value). Archive is available mac.archive.umich.edu, path: mac/util/organization/morsemaster1.0.sit.hqx The author can be reached thru the following e-mail addresses: h79261a@kyu-cc.cc.kyushu-u.ac.jp. (Eiji AOL account is no longer valid - moved back to Japan after his studies.)

<Morse Trainer-US v1.1.1>
MorseTrainer is a powerful tool for learning and training Morse code. Features: Three different training modes: user text, random text, library text; Arbitrary signal pitch and timbre; Arbitrary speed and tempo; Multi-alphabet support; Random text generator; Text library editor; On-line alphabet; On-line manual; Help Balloons; And a lot more. New features in 1.1: Enhanced sound generator, volume control and risetime control. The pitch is set in steps of 10Hz instead of using MIDI frequencies; Speed and tempo limits increased to 80 words/minute as a result of the enhanced sound generator; User-selectable font in the Misc settings dialog. FREEWARE!
This version uses TrueType fonts instead on bitmaps fonts so that

the user can distinguish 0(zero) from O(character). Furthermore speed and tempo can be given in either characters/minute or words/minute. Archive is available mac.archive.umich.edu, path: mac/util/organization/ Author is available via internet: sund@tde.lth.se
System 7 savy

<CW Speed Builder v3.0>
This program is for improving Morse Code (CW) reception skill. The major difference between this and other Morse Code training programs is that this one will not continue sending until you provide the correct answer. Major changes which have been suggested and implemented since last version include: after three incorrect responses the program shows the correct character; the list of characters at the end which will show those you know and those you need more practice on; the frequency of the tone has been changed; volume of the tone has been reduced; the character " - " has been added (dah dit dit dit dah) Comments can be sent as follows: America Online:K7UPJ, Internet:k7upj@aol.com, Packet radio:K7UPJ@KA3T, Compu$erv:70521,2356, Mail:Box 84, Cascade, MD 21719

*** Packet and other digital modes ***
<NET/Mac 2.3.38>
Allows simultaneous TCP/IP, AX.25, and NET/ROM connections. Requires a TNC with KISS mode. Copyright, but free for noncommercial use. The latest releases have added the ability to cut and paste from the console window and support of multi-port serial boards like AE's QuadraLink. It is now possible to have up to 16 TNCs connected up to a Nubus Mac!
Adam van Gaalen, PA2AGA, (Internet: adam@IGG.TNO.NL) has been making the modifications to NET/Mac. This version (and others) is available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/incoming), mac.archive.umich.edu and
System 7

++##NOTE##++
Adam recently sent oout a note to the distribution list about moving NET/Mac to Systerm 7 Pro. If you are contemplating this upgrade, Adam would like to know this... he would like to know about any particular features that System 7 Pro supports that you think should be added to NET/Mac. Please e-mail him at the address show above.

<Domain-to-Hosts Converter 1.0r3>
This application will create a hosts.net file from the domain.txt file that PC owners use with NOS. Created by Ken-NS1C is available on many TCP/IP packet switches in New England.program.
System 7

<IM/Mac 1.0b27y>
Mailer program for use with the SMTP protocol. Alternative to the

BM program that comes with NET/Mac. Written by Ivo van Ursel, ON1XK. Ivo is continuosly updating his mailer program. His newest release supports built-in BinHex support, selectable sound chimes for incoming mail, "quoting" of forwarded messages and lots more. If you are not using this program... why not? Check for the latest release in the directory before "blind" ftp'ing. This software supports System 7's Ballon Help and is System 7 savy! Available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/incoming). Author is available via internet: on1xk@igg.tno.nl <<-- new address for Ivo
System 7 savy

<SoftKiss 1.8>
Control panel device that emulates a TNC running in KISS mode. For use with packet-radio modems such as the Baycom kit and PacketMac Modem. Version 1.8 July 9 1993 update since 1.6. KD6PAG found a bug in quoting recieved escape and end characters is sofktiss 1.6. The bug and the fix and patch are all correct, thanks for some great detective work. Lots of doc files and drawings included in this archive! Requires the Serial Tool from Apple's Communications Toolbox! Available on the HAMNET forum of Compuserve, America Online and via anonymous FTP from akutaktak.andrew.cmu.edu (/aw0g).
System 7

<PacketMac Modem>
PacketMac Modem kits can be obtained from: Sigma Design Associates, P.O. Box 49085, Colorado Springs, CO 80919, (719) 260-5513 (after 1/94). Dexter Francis can be reached at FRANCIS4@AppleLink.Apple.COM

<Savant 1.0.1>
A new packet terminal front-end by the author of Virtuoso. Savant has a split window interface, but it's also a multi-window, multi-connection interface and will work with almost any TNC, unlike MacRatt or HostMaster. Savant also is compatiple with SoftKISS and the PacketMac Modem.
A demo version of the product is available at cpre1.ee.iastate.edu (pub/ke0ph) or via US Mail, send a SAS disk mailer and disk to CM Technologies, Inc., RR#1, Box 83A, Kelley, IA 50134 (515) 597-2051.
System 7, 32-bit, '040 cache clean and it supports the required AppleEvents.

<MacRatt with FAX>
Terminal program for use with AEA's PK-232 multimode controller. Supports packet, CW, RTTY, AMTOR, and facsimile. Includes cable. Advanced Electronic Applications, P.O. Box C-2160, Lynnwood, WA 98036.

<Host Master 1.2>
The Kantronics Host Master software provides an easy to use, multifunctional terminal program for the TNC. Host Master Mac is a simultaneous multi-mode terminal program for the Mac written by Kevin Krueger, N0IOS and marketed by Kantronics. It is a commercial

product available from most of the ham radio stores and supports single and multiple packet connects, packet monitoring, and HF operation (with KAM) each on a separate window, all at the same time. This package retails for $69.95 in the US and is intuitive, friendly, and well supported by Kantronics. Current version as of 10/20/93 is 1.2. It is hoped that a future version will support FAX but currently Hostmaster supports PACKET, AMTOR, RTTY, PACTOR (KAM ver. 6.0), CW, and NAVTEX. Features: text and binary file transfer; packet conferencing; color or B&W windows; cut, copy, paste between windows; call exchange and data/time stamp; auto startup/shutdown commands; transmit buffers for each mode; simultaneous dual port, multiple connects; supports KPC-2, KPC-2400, KPC-4, KAM and Data Engine. Requires: Macintosh Plus w/ System 6.05 or better. Current Kantronics firmware.
System 7 compatible, with baloon help

<PacketTracker 1.05>
PacketTracker ver 1.05 is a program that monitors packet activity and keeps track of what is going on. It draws a graphical map showing who is talking to who and displays statistics of all current stations and keeps a running tally of activity. PacketTracker was written for both the casual packet user and the network manager or BBS operator. The casual packet user will be able to learn a great deal about what is happening in packet around him; which stations are generating the most data and what some of them are. he will be able to see graphically what stations he can hitdirectly and which ones he cannot. For the network manager and BBS operator, PacketTracker provides extensive insight to the operation of the local network and problems such as excessive retries on a path. It also allows for extensive logging of channel utilization and other pertinate information.
NOTE: This application requires the Apple's Serial Tool from the Communications Toolbox.
System 7

*** RTTY ***
<MacTTY>
Decodes Baudot or ASCII transmissions. Can also be used for packet radio and other digital modes (including landline data communications). Includes split screen, a 15,000-character type-ahead buffer, and canned messages. Summit Concepts, Suite 102-190, 1840 41st Ave., Capitola, CA 95010.

<MacMultiCom 1.0>
MFJ sells MacMultiCom 1.0 for their 1278 multimode controller. MacMultiCom supports all of the modes of the 1278: packet, rtty, ascii, pactor, amtor, gray scale faxes, and many different formats of color sstv. The program requires a minimum of a MacPlus and a hard disk. Requires a color Macintosh and System 7 for best results.
System 7

*** Logging *** <Ham Radio Station Logbook>
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help. SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

<FDLog!>
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates. System One Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

<MacContest 4.0>
The ultimate contest logging program for the Macintosh (System 7 proof). Covers CW/SSB/RTTY modes and all bands from 1.8 MHz to 5.7 GHz. Allows real-time or post contest logging for a wide variety of contests (30 contest include, new ones can be added). Checks for dupes, figures scores instantly. Offers various printouts (sorts per band, alpabetically, labels etc.) Interfaces to TNCs (KAM, PK-232) for CW, RTTY and packet modes. Built in terminal mode and packet DXcluster interface. Interface to Kenwood transceivers for automatic band/mode logging. MacinTalk voice output for real-time logging as well as to ease post-contest entry. Option to capture log in realtime to printer. Option to simultaneously create a save copy of the log to a different file/drive. Timetable showing actual grayline on a world map.
MacContest is free but must be personalized to each user (otherwis it's limited to 50 contacts). To get a copy send a 3.5" diskette and a SASE to Gerald Eberle, HB9CEY, PO Box 13, CH-4417 Ziefen, Switzerland.
Moritz (HB9BLZ) can act as a message forwarder for Gerald. Moritz' e-mail address is: gysslerm@saturn.kau.roche.com

<LOGic>
(Macintosh version scheduled.) Lets you define the rules determining dupes (such as once per band or once per contest). Displays heading, distance, and other information about the country being worked. Automatically enters contact time; if interfaced directly to a radio, also enters the frequency, band, and mode. Shows status toward earning amateur-radio awards. User-definable database fields. Exchanges data with other programs. Personal Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

<HF Logger 1.2>
A real fine HyperCard logging program! (hey... thats all I got!)
N0QGQ

<Simple Log .2b>
This little utility is a handy way to create a logging file that you can later import into any data base for analysis, etc. It also

shows you that just about anyone can use Think C and create something on the Mac! Let me know if you'd like the source code. WD1V @ WA1WOK.NH.USA.NA Author is John Seney - WD1V, e-mail address is jseney@aol.com. For a copy of this program, mail a SASE disk mailer and 800K disk to: John D. Seney, WD1V, 144 Pepperidge Dr., Manchester, NH 03103
System 7

<Marathon>
Contesting/logging- Have seen references to (March 92 CQ magazine) and heard good things about MARATHON by N 0 IOS. I believe a demo was available for $8. Last address known is: Kevin Krueger, N0IOS, 1780 Ruth St., St.Paul, MN 551O9

*** Propagation, gray line, DX headings *** <DX Map v1.1>
Displays a map of the world with the terminator. Gives location, prefixes, zone numbers, distance, and heading for any country you select. Freeware. Requires HyperCard 2.0. Available via anonymous FTP from joker.optics.rochester.edu (in the /ham/dxmap directory). Or send a formatted 800K Macintosh disk with a stamped, self-addressed disk mailer to Len Saaf, NV2Z, 52 Raleigh Street, Rochester, NY 14620 (Internet: saaf@joker.optics.rochester.edu).

<SatTrak>
Primarily a satellite tracking program, but also calculates beam headings, Maidenhead grid locations, MUF plots, and band openings. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K or 14.MB Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

<Sun Clock>
Desk accessory. Displays a color map of the world, including the terminator. Indicates current time for any location. MLT Software, Inc., P.O. Box 368, Portland, OR 97207.

<DX Window>
Draws a great-circle world map centered on your QTH, with day/night terminator indicated. Displays over 400 DX locations with prefixes and beam headings. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.1>
Enter solar flux and get propagation predictions to desired areas of the world. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.5>
Provides sunlight status at both ends of a path; MUF, F0F2, and FOT frequencies; S/N ratio of the link; and other information. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<DX Helper v1.57B>
Displays beam heading, distance, gray line, and propagation information. Generates great-circle maps. Identifies prefixes, zones, and oblasts. Includes code practice. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98336.

<Mac MiniMUF v5.1>
A greyline and propagation predictor based on the PC version of MiniMUF by K4CFV. It is available directly from him for the price of a formatted disk and SASE (disk mailer). His address in callbook or: Bob Stamper K4CFV, 12510 Shadowrun Blvd., Riverview, FL 33569

<Mac ShortWave v1.2>
A program called Mac Shortwave that figures MUF and LUF. BXA Research in Plano, Texas

*** WEFAX ***
<RadFax 0.9>
RadFax 0.9 is somewhat incomplete and may have bugs, it is capable of receive weather faximile messages via the sound input port of Macintosh computers. Basically you connect your Mac to a shortwave radio and tune in to weather fax station. You set the reception speed and desired resolution and start receiving.
I'm not sure if I'm going to add the features that I still feel are missing, but if I get enough shareware payments, I will do so. In any case, anyone who send me a shareware payment of $25 (cash prefered, but I guess there might be a way for me to cash checks too) will receive a disk with the full source code for the program. You will need at least Think C 5.0 and TCL to compile the program. Shareware payments should be sent to: Juri Munkki, Ehrensv 20B8, SF00150 Helsinki, Finland

<WeFaxWorks>
Weather facsimile terminal program for use with Kantronics TNCs. Kantronics rfconcepts, 1202 E. 23rd Street, Lawrence, KS 66046.

*** Satellite tracking ***
<SatTrack v1.02>
Tracks one satellite across a world map as it moves, displays the instantaneous position of several satellites, or generates tables of all satellites visible from a certain location at a given time. Also calculates beam headings, Maidenhead grid locations, and MUFs. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

<MacSat v3.1>
Tracks up to 21 satellites simultaneously, either in simulation or real-time mode. Text screen displays ground-track coordinates, range, mean anomaly, visibility (azimuth and elevation) and Doppler shift frequency information for all satellites being tracked. Graphical screen portrays the satellite ground tracks superimposed

on a world map. Polar plot displays graphically the precise location of each visible satellite above the observer's horizon. Developed by the Geodetic Research Laboratory of the University of New Brunswick. Available from Richard B. Langley, R.R. 12, Fredericton, N.B. E3B 6H7, Canada (Internet: lang@unb.ca). A demo version of MacSat may be ftp'ed from directory PUB.CANSPACE on unbmvs1.csd.unb.ca.
System 7

<OrbiTrack> <OrbiTrackFPU v2.1.4>
Calculates look angles to selected satellites, plots current satellite positions on a world map, and displays the visible passage of a satellite against background stars (either within the program itself or via a data file that can be read into the Voyager astronomy program). Please note that one version requires an FPU to operate! BEK Developers, P.O. Box 47114, St. Petersburg, FL 33743. (Bill Bard, CompuServe: 75366,2557) (Note: This replaces BEK's previous MacSat program, which was not related to the program of the same name from UNB.)

<QuikMac>
Macintosh version of N4HY's QuikTrak program. Requires Microsoft BASIC. AMSAT, P.O. Box 27, Washington, DC 20044.

<Satellite Orbit Prediction Program>
Macintosh conversion of W3IWI program. Requires Microsoft BASIC. Send formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Earl Skelton, N3ES, 6311 29th Place NW, Washington, DC 20015. Or send self-addressed stamped envelope for source listing.

<Satellite Pro>
Uses world maps and tables to indicate rising and setting schedules, current locations, mutual visibility opportunities, and footprints. Includes Mercator, polar, and great-circle displays. Optional antenna control. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98366.

<Macintosh Spacecraft Personal Orbit Computations (MacSPOC)>
Software used aboard the Space Shuttle and in Mission Control to track the Shuttle. Models engine burns, orbit perturbations, and the Shuttle's orientation. Free online data uploads during Shuttle missions.
Commercial v1.5 available from Daniel R. Adamo, 4203 Moonlight Shadow Ct., Houston, TX 77059; telephone 713-480-9631; AppleLink: D3176; America Online: AdamoD. Test drive v1.1 available on AppleLink (path "K-12 Education: Education Resources: Science Resources: MacSPOC: Space Shuttle Orbit Software"). Author is on AOL and can be reached as adamod@aol.com via the internet.

*** Antenna design ***
<MacMiniNEC>
Chris Smolinski, N3JLY, 40 South Lake Way, Reisterstown, MD 21136.

*** Radio control ***
<ICOM Radio Control>
Provides a Macintosh interface for controlling ICOM transceivers that use the CI-V remote-control system. Lets you quickly change frequencies and modes. Also does logging and duping. Requires a CI-V to RS-422 converter (schematic included with program).
KE6FG Software, 9763 Pali Avenue, Tujunga, CA 91042.

<FreqValet>
Provides frequencies and DX program info for shortwave radio listeners. The program databases update automatically at 15, 30, or 60 minute intervals, thus providing a continuous display of broadcasts on-the-air at any given time in a spreadsheet like format. Features include sorting of data, scanning, and on-screen changing of databases. The program will convert Tom Sundstrom's dBase shorwave broadcast listing to FreqValet format and will do the same for Shorwave Navigator users. Separate cards are provided for DX Programs, Ship to Shore, and Utility broadcasts. Computer control modules are available at extra cost for the Drake R8, Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.
DX Computing, 232 Squaw Creek Road, Willow Park, TX 76087.
Telephone (817) 441-9188 or (817) 441-5555 (fax). Author is available via internet: dxcomp@aol.com System 7 with HyperCard 2.1

*** Ham radio BBSs ***
<Digikron Systems BBS>
Various ham-related applications, including logging, propagation, Morse code, and packet. (408) 253-1309.

<N8EMR BBS>
Various ham-related files, including packet, DXing, and contesting software; AMSAT bulletins; and several ham newsletters. (614) 895-2553. Also available via FTP on AMPRnet at 44.70.0.1.

<WB3FFV BBS>
Various ham-related software, including packet, contesting, and Morse code applications. (410) 661-2475, 661-2598, and 661-2648.

<ChowdaNet BBS>
(more info at a later date)

*** Online Services carrying Ham Radio software ***
<America Online>
Supports Macintosh, PC's DOS & Windows versions, PS/1, Apple //s, Casio Zoomer. Ham Radio Club (keyword = ham radio) supports all computer types. Software for amateur radio, scanners, swl'ers and general electronics. For 10 FREE hours of trial time send your snail mail address to tstader@aol.com or call 1-800-827-6364 Ext. 6285. This site NOT ftb'able (yet). Internet e-mail.

<CompuServe>
Supports any communications software on most computers Ham Radio area (go hamnet) supports all types of communications formats. Call

1-800-848-8199 for information. This site NOT ftb'able.Internet
e-mail.

<Delphi>
(more info at a later date) Internet e-mail

<GEnie>
(more info at a later date) Internet e-mail

<Prodigy>
Has ham radio message areas, no downloadable software. Limited
internet e-mail.

Mickey R Henniger (henniger@crl.com) wrote:

: Getting PGP will not solve the problem. I feel our government intends to:

: 1. provide a somewhat viable encryption standard with a govt backdoor.
This is unnecessary, why create a backdoor when you have the key? All
clipper keys are in the posession of our government with no LAWS to
protect them. Clipper is probably secure except for the fact that the
keys are all in "their" hands. see sci.crypt or alt.security.pgp

: 2. pass laws which make it illegal to use non-govt sanctioned encryption.
: (after all, if you are innocent, what do you have to hide?)
This is a possibility. A scary one.

: The standard argument has always been '...in the national interest...'
: The question becomes:
: "Do we really want to give up the last sanction of privacy left to us?"
No!

OBradio: I mentioned it before but got no responses, is the use of PGP
verification acceptable on packet?

cheers,
Dan

The easiest way to solve this problem, or atleast get an answer, is to run down to the local library or bookstore and look for NOLO press they publish a whole series of books about the law, and unlike most of us, they ARE lawyers. They have a book out for tex exempt organizations it includes who is/isn't tax exempt and the various forms of tax exempt status.

Good luck and let us know what NOLO has to say,
Dan

There were some managers at the FAA that were let go last week because of the
sad state of affairs with the new ATC software.

>politics makes it difficult to find other frequencies
>that are those compatible with radios already in use.

No, the better solution is to convince people to use
lower power, and *lower* sites to reduce the exposed
terminal problem. 40 db over S9 signals are not required,
S2 is fine. The best solution is to use a separate non-
contending link frequency, of course.

>Yes, I know you could modify all the TNCs for some sort
>of optimized slotted Aloha protocol, but I doubt this
>is really practical.

Right, it isn't practical, and all it takes is one joker
who doesn't want to play to screw it up for everybody.

>Getting links on clear frequencies is where microwaves
>show their superiority. Not only is it more difficult
>to fill the wider bands with wall to wall signals, but
>highly directive antennas make frequency reuse more of a
>possibility. All that money spent on VHF bricks
>might be put to better use on microwave transverters.

The price of a VHF brick might make a down payment on
a stable microwave transverter, but you still are faced
with the LOS problems. Cheap, narrow, stable, pick one.
As far as I know, the cheapest suitable microwave
appliance is the SSB Electronics system. It costs
about what a VHF kilowatt does. Gunnplexers are neither
narrow nor stable. (not to say they won't *work* for
some unimpeded paths, but you can't co-locate a lot of
them in one of our bands).

>I'm pretty sure an analysis of the phone calls I've
>recorded would show that its not just DXers who run
>beams and amplifiers into their local BBS. I usually
>end up spending an extra few minutes explaining that
>while a beam results in stronger signals, this advantage
>is often eliminated by the extra collisions that result.

Yeah, there are others besides DXers who think power is
the answer to every problem. And it's true that too little
power, or too low an antenna can create hidden terminal
problems as well. The overall MAN system has to *balance*
to work well.

>I've found that an open wire fed *HF* dipole, even
>though it is cross polarized, works a lot better than
>an indoor yagi for packet work, because it hears more
>stations than the yagi.

A nice outdoor vertical that hears nearly as well as
your BBS or node is even better. Especially when coupled
with the minimum necessary transmit power. (Phil Karn's
pseudo-cellular approach would be best *if* the average
ham density was high enough. Unfortunately, it's not.)

Going from 600 Hz to 400 Hz may not be enough of a change to make
a significant difference. You might want to shoot for a bit narrower.

I'm assuming the circuit has the capacitors in series between input
and output with shunt capacitors at input/output and the junctions
of each pair of crystals. Increasing the capacitance should narrow
the bandwidth. It will also lower the resonant frequency a bit
and increase the insertion loss slightly.

Zack Lau (KH6CP) (zlau@arrl.org) wrote:

: ... Increasing the capacitor values will
: decrease the bandwidth, but will also decrease the impedance.
: Impedance matching is important to maintain the proper filter
: shape. ...

To clarify, the load impedance is not really matched to the crystals,
it is matched to the source. Consider a single-section series crystal
with no matching capacitors. So long as the crystal series resistance
is small compared to the load resistance, the crystal has no effect
on source/load match at resonance.

When you add the shunt capacitors on input/output, you basically have
added L-networks at both ends, with the crystal providing the required
series inductance to effect the proper match. (The crystal looks
inductive above resonance.) The "L-network" transforms the 50 ohm
source/load impedance down to a lower value, which increases the
loaded Q of the crystal, narrowing the bandwidth. That also increases
the insertion loss, which is proportional to (loaded Q) / (unloaded Q).
The bigger the capacitor, the greater the impedance transformation and
the narrower the bandwidth.

In the following "schematic", L is the net inductance of the off-resonant
crystal, and R is the crystal's effective series resistance:

L-network L-network

Source record: 270018

Dan (N2EDC) writes:

A few years ago, at a cross-country ski center, I saw an employee with a handheld radio attached to his chest with some sort of harness. It held the radio at a diagonal angle such that the antenna (VHF duck) pointed at his left shoulder and the base of the radio pointed at the right side of his waist.

The harness seemed to be made out of neoprene or nylon and was black in color. I want one. It would be terrific for cross-country skiing, because if you fall, you don't fall on your radio. Even if you don't fall, it makes the radio easier to use because you can simply press the ptt switch without removing the radio from the harness.

Does anyone have any information?

Look in police/rescue team supply catalogs. I think I saw this harness in the Gall's catalog, try 800 information for their number.

For Sale

50 foot Tower suitable for Radio/TV/HAM Equipment

The tower is of a heavy duty construction. While it was in use, I was able to climb up/down it with no problem(and I'm 6'2", 220 lbs.). It is tapered in it's design. it currently has a rotor with a TV ant. attched the ant. is of qu estionable condition so I'll throw it and the rotor in for free. I would like to get $150 for it. It's in Rockford, IL. If you are local, come get it. If not buyer would have to pay for any kind of shipping in advance, or COD.

Thanks,

Matt u61474@uicvm.bitnet

2674. Day.Hamfest remote control for contesting meeting?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-08 06:41:28 UTC
From: apontej@dmapub.dma.org
Message-ID: <CMC2L6.Cv4@dmapub.dma.org>
Source record: 270023

anyone interested in discussing remote control for contesting
as an unschedule informal meeting during the dayton hamfest please
contact me (jose aponte - kp4uy). I will be working in the speaker &
forum desk, if not there please leave contact information & interest.
as a reference there was an article on cq july 93 page 68
that talks about the servant station. internet can be a land line
that would carry digitized morse code to be received by master. there has
been efforts by at&t to carry live packatized voice... anyone care to comment
on this? a way of doing it with existing tcp/ip? there are other issues on
how a station on the us can compete with the big guns in remote locations?
at present cq ssb wpx contest states that the xmiter needs to be connected
physically to the antenna, at least that was last years rule. so it is
posible to those rules to operate remotely, right? anyone care to comment?
on rules, interest, ways of doing it?of course you can't move the station
around from location to location depending on conditions... but what are the
rules for someone operating out an airplane, ship? no flames please because
they will not be read or replied to... only constructive comments.. gracias

2675. HELP: Yaesu ft-26 reset problems.

From: burrus@cmu.unige.ch
Message-ID: <1994Mar8.085819.1@ugcmu>
Source record: 270024

I have done a reset on my ft-26, pressing simultaneously
" T " and " REV " while turning the transceiver on.

Before this operation I had RX 130-174 MHz
TX 140-150 MHz

and now I have only RX 144-148 MHz
TX 144-148 MHz

I have never open the transceiver to do some mods.
How can I retrieve the old limit values ?
How can I reprogram them ?
Can I change them ?

Thank's in advance
Christophe

Well, I sometimes hear CW QSOs round 28.05 28.1 MHz. Last saturday, I heard
4XPU from near Tel Aviv, Israel, QSG : 28.48 MHz if I remember correctly.

The band is not ccompletely closed, but the openings are quite rare, and
rely mostly on sporadic E, since the MUF is seldom wandering above 20 MHz.

Be patient.

Vince (14 weeks and waiting)

2679. US License Examination Opportunities Scheduled 3/4/94 to 6/6/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-08 12:57:22 UTC
From: bjahnke@arrl.org
Message-ID: <2196@bjj>
Source record: 269830
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

Hello,

I noticed Amateur Radio Newsline #864 mentioned a new Russian
ham satellite will be launched later this month. I was wondering
if someone could tell me where I could find some information on this
new satellite.

Thanks and 73

TJ, kv2x

>2) 6Y5IC - any special route to get a card?
>
>

Well, my callbook (94) says that PY0FM's QSL route is via PY5CC,
but I asked him for a route when I worked him during the contest
and I have written down on my notes "via PY7CC". I assume that
the disagreement between this note and the callbook is due to
contest fatigue on my or PY0FM's part and that the callbook is
correct. Did anyone else actually get a route from him while
on the air?

cheers -- John Unger, W3GOI

Yes, I heard him on 10 meters this weekend and he said "via PY5CC".
Then again, I tried this route over a year ago and never received a
response (for a direct QSL request). Has anyone ever had any luck
with this route?

>a certain audible pattern. When I then began attempting to write down
>what I heard, instead of hitting a key, I discovered that I was not nearly
>as proficient as I was on the keyboard.

That's what the military and commercial operators discovered too. Copying with a typewriter is much faster than copying by hand. That's why they *teach* the Code that way, and why intercept operators always copy with a keyboard. Note that what they want is an accurate and legible copy of what was sent. Since most intercepted traffic is encoded, and most commercial traffic heavily abbreviated and filled with "commercial codes", flawless copy is mandatory or all meaning could be lost. That's what the FCC wants on the test too, though the current amateur test doesn't require zero errors, just one minute out of five perfect copy, or the answers to the multiple choice questions as the case may be. That level of performance would wash you out at military or commercial levels of required accuracy.

Copying in the head isn't real copy, but it's what some hams do on the air. That's because their communications content isn't important enough to require perfect or permanent copy, and because they can "fill in the blanks" from plain English context and from the standard amateur QSO format. That wouldn't do if artillery coordinates were being sent.

>But, you bring up an even different point. If the only goal is to make

>day and age, it is so easy to develop inexpensive devices that could decode
>morse, that the only reason to keep the test is to be certain people are
>proficient in reading and writing without devices to assist them.

Actually, I think you'll find that your Sound Blaster code wouldn't
do a very good copying job on normal, noisy, interference filled, HF
channels. It's possible to exceed human Morse copying ability with DSP
and/or massive processing, but it's neither simple nor cheap to do it
in real time now. That's because Morse is an irregular code with
non-uniform element lengths, spacings, and character lengths. It's
also normally sent by incoherent on/off keying. Machines can easily
exceed trained humans in flawlessly copying signals buried in noise
and interference when the encoding is uniform and coherent, but Morse
is not a good code in those respects. It was designed, rather haphazardly,
in an era before a good understanding of information theory existed.
And it was designed for use on essentially noiseless and interference
free wire lines. It's use over radio is more of a historical accident
than an intelligent choice.

The 3-Hr Ap Indices for 06 MAR 94 are: 9 9 17 13 4 6 10 15
Greater than 2 MeV Electron Fluence for 07 MAR is: 3.1E+06

SYNOPSIS OF ACT

Solar activity was very low. Three weak B-class xray
events were recorded this period. Region 7685 (S08W04) has
shown slight white light growth while indicating some trailer
penumbra decay. Region 7687 (N18E03) elongated slightly along
a E-W axis this period. All other regions quiet.

Solar activity forecast: solar activity is expected to be
very low to low with Regions 7685 and 7687 the most likely to
produce C-class activity.

The geomagnetic field has been at mostly quiet to
unsettled levels until 07/03Z when the field became disturbed.
Conditions since 07/03Z have been mostly active to minor storm
at middle latitudes and active to major storm at high
latitudes. Periods of severe storm levels were recorded at
07/18Z at high latitudes. This geomagnetic storm is believed
to be caused by a favorably positioned coronal hole. Recurrence
indicates this hole has persisted for several rotations.

Geophysical activity forecast: the geomagnetic field is
expected to remain disturbed for the remainder of this
forecast period. Active to minor storm conditions with
isolated periods of major storm levels will persist at mid
latitudes. Active to major storm levels with some severe
storm levels can be expected at high latitudes.

Event probabilities 08 mar-10 mar

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 mar-10 mar

A. Middle Latitudes
Active 30/25/25
Minor Storm 30/25/20
Major-Severe Storm 10/05/01

B. High Latitudes
Active 30/30/25
Minor Storm 40/35/20
Major-Severe Storm 15/10/05

HF propagation conditions began deteriorating during the
day. High and polar latitude paths experienced poor to
occasionally very poor propagation due to the enhanced
geomagnetic and auroral activity. Middle latitudes observed
minor signal degradation. Stronger degradation is expected
during the local night hours. No improvements are expected
until after about 10 March.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

[The original had the date back to front]

This week Spectrum takes to the road. We will be broadcasting live from
the Winter Swl Fest in Kulpsville Pennsylvania. Everyone who is anyone
in the communications hobbyist community will be on hand. If you can
make it we would love to shake your hand. If you can't join in on the
fun in person, you can listen to our live broadcast at the usual times
and frequencies. See you at the Winter Swl Fest '94.
--
Spectrum airs live Sunday at 0300 UTC (2200 EST Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
KHNC, 1360 AM, Denver, CO (Denver Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EST, on WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
Monday at 0400 UTC (2300 EST Sunday),
on WWCR, 7435 KHz, Nashville, TN (World Wide)

I just got a high power tube and am wondering what it's characteristics might be. It's an Eimac 3CW20 000A7. If it's worth something to someone I may consider selling it, but it will make a great conversation piece in the event no one does.

For what it's worth: I also have the filament transformer (6V 100A), blower and socket. It is mounted in it's socket.

: But keep in mind that they're NOT ads because the item is not for sale
: yet (even though the price was posted for us).
I've seen this argument posited before, I'm not sure if it's real or
not. Anyone who thinks that the non-existence of a product means that
ads for it are not advertisements should look at the last couple months
of QST. Lots of companies advertise before the product is actually
available. (Sorta like President Clinton and the health care program)

cheers,
Dan

[Rest of letters deleted]

Maybe if we talk nicely to the coordination bodies and explain what's been going on we can get them to either refuse the ARRL the free (and unacknowledged) use of their data or to charge them for it. I for one would rather see the online database than the silly paper one. I think the ARRL has been a real poop about this, and is running amok over its members. I wonder what they'd say if TMARC or SARA decided to allow Mr. Yee free access to their data, but not the ARRL??? Serves them right...

>feature on this rig?

The noise blanker reduces impulse noise. The sort of noise
generated by mopeds, lawn mowers, electric fences etc. This is a nice
feature on a mobile rig. If you live in an RF quiet neighbourhood, you
don't need it.

I have an Omni D with the noise blanker. I use it in rural
Wisconsin. I have played with the noise blanker, but have never needed
it.

I am writing a code-practice program for my Amiga computer, and
I wonder if anyone can give me a definitive answer to exactly
how many milliseconds long a dit at 18 wpm is supposed to be?

The only references I have say that wpm is defined for 5-letter
words. But, since letters vary in their dit content, I assume that
this is supposed to be some sort of "average" letter. Does the FCC
say in some regulation (not in Part 97 that _I_ can find) how
many dits an "average" word or letter should be composed of?

Note that this would be different for messages composed of random
letters, and messages composed of plain-text. In fact, plaintext
that has a lot of ham-style abbreviations will have different letter
frequencies than other sorts of plaintexts. Throw in proceedural symbols
like AR and SK, various punctuation marks, numbers and what-not, and
you can see why I'm looking for the real, "definitive", definition.

FWIW, Morse used the number of pieces of type in a printer's type case
to determine letter frequencies when he assigned various seqences
and if you compare the results with other people's data concerning
letter frequencies you'll see some real differences.

So, just what _is_ the _exact_ standard? (Assuming that there _is_ one.)

[I know, I'm talking about differences that are very small, but still
I'd be surprised if there isn't some better standard than simply saying
"x wpm = x (undefined) words of 5 (undefined) letters per minute". The
simplest such standard I can think of is to simply _define_ some particular
x wpm as composed of dit units of y milliseconds, thus my question above.
Since the ARRL uses 18 wpm character rate in their code exams for 5 and 13
wpm tests, I figured that there must be some standard by which they are
going.]

The 3CW20,000A7 is a power triode rated at a maximum plate dissipation of
20 kW @ 110 MHz. Max. plate voltage is 7 kV, max. plate current 4.0 A.
According to my trusty old Eimac handbook, it takes 7.5V at 99A to run the
filament, and uses a combination of forced-air and water cooling. Anything
else you need to know about it?

(This is an impressive tube from a ham perspective, but it's *far* from the
heftiest thing that Eimac offers. Their catalog is an interesting read....)

On the USENET, no commercial activity is allowed. That means that
you cannot post advertisements for your company, or for a product you
wish to market, etc. Anything you will be making a profit on that
contributes to your steady income is not allowed.
However, it is perfectly all right for people to post for
sale/wanted ads on the USENET, so long as the items for sale are few in
number, and your sale is infrequent. So, if you want to sell your dual
band mobile unit for money to get an HF rig, that is allowed. But if
you want to sell a product, like a new software program you've written,
or a PC card you've designed, that is not allowed.
The appropriate newsgroup for classified advertisements in the
rec.radio.* hierarchy is rec.radio.swap.

From what I know, all yaesu HT's use the same expand receive/TX mod. Hold the freq "\/" and "/\" buttons at the same time when you turn the radio on. This works on most yaesu radios that i know of, but it will erase your memories. This should return your factory pre-set range. Good luck!

You can get the satellite orbit information from rec.radio.info They often post orbital elements. Some are 2 line elements, and some are the other kind (whatever you call them). Your program may require a particualr input format.

I use Traksat sometimes and find it very functional. It is available via FTP from fdtp.std.com

You will need reciprocal licenses from all three! Norway for "high seas" operation, and the respective countries for operation in their waters.

> Thanks for your help! I've got about a month's lead time here, so
> any info would be appreciated!

A month may well be too little time. Contact ARRL's FAQ on the subject (help@arrl.org) to get the basic information you will need and use airmail!

Be sure you specify the time of your cruise so the license will be issued for the correct time.

ZCZC AE11
QST de W1AW
DX Bulletin 13 ARLD013
>From ARRL Headquarters
Newington CT March 3, 1994
To all radio amateurs

SB DX ARL ARLD013
ARLD013 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW; the OPDX Bulletin; Chod, VP2ML; the DX Bulletin; Bob, W5KNE; QRZ DX; the Yankee Clipper Contest Club PacketCluster network; and Contest Corral in QST

PRATAS ISLAND. Martti, OH2BH, reports that preparations are under way for the upcoming 10 day DXpedition. The target date is March 16. So far there are 14 operators on tap for this one.

PACIFIC DXPEDITION KC6/KH2/V63. JR6IQI and JK6UER will operate all bands both CW and SSB. Their schedule is Belau from March 13 to 16 as KC6KT and KC6UA; Micronesia from March 16 to 18; and Guam from March 18 to 20 as KH2/JK6UER.

SIERRA LEONE AND LIBERIA. Jay, K4ZLE, will be in Sierra Leone until March 10; Liberia between March 11 and 17; and back in 9L-land on March 18 and 19. Operations will be mainly CW on 80, 40, 30, 17 and 12 meters, though some SSB and activity on the other HF bands is possible. He will be active with 9L2SH and AA8NW in the phone portion of the ARRL International DX Contest signing 9L2SH.

EGYPT. SU2MT should be on in the phone portion of the ARRL International DX Contest. Also listen for this one on the lower bands and on CW.

NAMIBIA. V51GB has been on 14192 kHz around 0615z. Baldur, DJ6SI, and company have been operating V59PI from the former Penguin Islands. Look for V51HK on 24944 kHz at about 1530z; and V51Z on 1832 kHz at 0500z, 7007 kHz at 0600z, and 10100 kHz at 0400z.

GUYANA. Larry, N4VA, is expected to be in Guyana on March 4. He will be involved in radio training and putting together a club station with the Guyana Amateur Radio Association. His on-the-air activities as 8R1/N4VA will offer fills for band/country holes. Check the PacketCluster for frequencies.

TURKS AND CAICOS ISLANDS. W2KHM will sign VP5/W2HKM from March 19 to 27 on SSB only. Check 14226, 14247, 21335 and 28495 kHz. Low band skeds can be arranged via internet address athanrrpi.edu. QSL via 15 Eaton Road, Troy NY 12180.

ZAMBIA. DL7VTM and crew will be on from March 14 to April 6. They will operate on all bands and modes, including some satellite work, as 9I2Z, 9I2A and 9I2M. Lots of activity is planned for the CQ WPX Phone contest. QSL all three calls via DL7VRO.

THIS WEEKEND ON THE RADIO. The phone portion of the annual ARRL International DX Contest is a 48 hour event starting at 0000z March 5. W/VE stations work amateurs in as many DXCC countries as possible. DX stations work W/VE stations. W/VE stations send signal report and state/province. DX stations sent signal report and three digit number indicating transmitter output power. For full information and contest rules, check page 125 of December QST NNNN

I just keyed in the frequencies you mentioned into my 530, and the 2m
side has an S9 signal on the meter, but no 'Busy' indication on the LED.

The 440 side has a constant S3/S5 signal, with an intermittent 'Busy'
indication.

Just letting you know...

Scott

: contributes to your steady income is not allowed.
No offence but this is patently wrong. Commercial activity is not
allowed to run along the NSF backbone which is the Internet (with a
capital I). The internet (with a lowercase i) is not controlled by NSF
and if your messages are not routed through NSF nodes there is no
problem. Usenet is another animal altogether Usenet is run on many
sifferent sites and is not the Internet. You can advertise and treat the
Acceptable use Policy of the NSF much like the new Ham regs, but if you
are a .com site that is all supposed to be taken care of by your
provider or systems guy. It is the responsibility of the systems
administrators at NSF connected sites to keep commercial activity off.
For a more thorough (and possibly more accurate) treatment of this look
at news.newuser.announce (I think thats the right name).

good luck,
Dan

Just to put this into context:-

That should read:
In other words, it is quite legitimate to get tries a three *different* tests.

And just for interest's sake, at a testing session last weekend, one chap
managed only six questions from the quiz. Checking his written text, we
found that he had above *three* minutes of solid copy, and of course, he
passed at that speed.

Just one of those things, I guess :-)

Honda seems to have a problem with their ignition system that's reminiscent of the problems that used to plague Fords back in the 1960s. You have to understand that a Kettering ignition is very similar to an old spark transmitter (in fact auto spark coils were often used in low power spark transmitters). So you have to take steps to suppress this hash.

There are three ways to suppress this type of noise. The first method is to bypass the noise from the low voltage wiring. To do this, you need to place capacitors (often still called "condensers" in the auto world) *directly* to ground from the offending interference sources. The low voltage wiring going to the ignition module should receive 0.001 uf capacitors with as near *zero* lead length as possible directly to frame/engine ground. "Feedthru" type capacitors are ideal for this application, but the "condensers" used in older point type ignitions can be used too, though with somewhat less effect at VHF. The key things to remember about bypassing is that you need to attach the capacitor as close to the noise source as possible, and have as direct an *RF* path as possible to frame ground. A 2 inch lead length is way too much and won't let the bypass do it's job properly. Note too that the distributer lower body is usually directly attached to the engine block, so it can be used as the ground point.

The second line of attack is on the high voltage side of the ignition system. The reason we get RF hash up in our bands is because of the sharp risetime of the ignition pulses. If you recall theory, a square wave is made up of an infinite number of odd harmonics, so it's a rich source of noise in the RF spectrum. The trick here is to soften the edges of the waveform so that it approaches a triangle or sine wave. You do this by using *resistance* in series with the circuit. Common ways

are resistor plugs, resistor wiring, and special resistor inserts to the wiring. A resistor plug has a resistive element built into it's body. Champion resistor plugs have a "R" in their part number. For example, a J-10 plug does not have the resistor element but a J-10R does. Resistance "wires" once had cotton cores that had been carbonized as their conductive element. You don't see these much anymore because modern cars have such high underhood temperatures that the "wires" deteriorate rapidly. Modern wires use other construction methods, but still maintain the principle of distributed resistance. You can check your wires with an ohmmeter. If they read near zero ohms end to end, they aren't resistor wires. A resistor insert looks like a coax adaptor fitting. It has a mating connector that goes into the distributor tower, a short bakelite body containing the resistor, and a mating connector to accept the wire. I haven't seen these around lately, but they used to be common in parts stores.

The third line of attack is shielding. In the Corvette, radio noise used to be a horrible problem. The way GM solved it was by placing the distributor and HV wiring in a monel metal "doghouse" that completely surrounded the noise sources and was attached firmly to engine/frame ground. This structure formed a Faraday cage for electrical fields, and due to the anti-magnetic properties of monel, formed a magnetic cage as well. (You have to be concerned about magnetic induction from the HV wiring to the rest of the wiring harness. Watch your wire *routing*, wires carrying high energy pulses should never be allowed to run parallel with other wiring.) This extreme shielding was necessary due to the plastic body of the Corvette. In a more normal car, the hood, fenders, and grille form a metallic shield about the engine compartment. (Well they used to, in today's cars the inner fenders are usually plastic, as is the grille, and the hood often isn't electrically well bonded to the frame.) Flexible copper bond straps can assure that the hood is electrically grounded. Bond straps to the exhaust system are useful as well since the exhaust system is often rubber isolated and is long enough to form an effective antenna when shock excited by sparks at the engine end. Ground bond it about halfway back, and at the far end.

Another approach to shielding is the one used on aircraft. The electrical components are shielded using wiring similar to coaxial cable. You can do this in an auto too. There used to be a fellow who advertised kits for various cars in QST. I haven't seen his ads in a while, but the kits may still be available. There is also a HV wire sold that uses a similar approach. It's copper cored and wrapped in a flat ribbon of monel metal. Or you can make your own shielded wires. If you take the shield from RG-8 and slip it over your spark plug wires, and ground it to the engine, you'll suppress most of the noise being radiated by the wires.

There are always ways to attack ignition noise. Some manufacturers do it for you, others don't do as good a job. There are also other sources of electrical noise in a car, such as electric fuel pumps, electrically driven fuel injection systems, blower and wiper motors, etc. They all

will respond to bypassing or shielding. You can always do the job right if you are determined enough, or you can just buy an American car. :-) (EM compatablity has long been a concern of car companies with strong fleet sales programs to police, taxi, and other two way radio users. Honda brags that they don't have a fleet sales program. That should be a red flag to any two way radio user.)

>for crystals that oscillate around 3.1728, but didn't see any. Can any of the
>more technically savvy of you out there suggest the culprit?

This is almost certainly internally generated intermod. It's a mixing product of the two LOs at some harmonic. That product is either in-band, or falls on the IF frequency (likely the latter). Look for X*F1-Y*F2=IF where F1 is one LO, F2 is the other, and X and Y are small integers. To do this you need to know whether the radio uses high or low side injection, and what the IF frequency is. As I recall, Yaseu doesn't use the common 10.7 MHz as the first IF.

This is a common problem with dual banders. Most will exhibit this behavior at some combination of 2 meter and 70 cm frequencies. There's no good way to fix it. The high receive sensitivity required to work with a rubber dummy load, the strong LOs, and the common IF make this type of problem almost inevitable between 2 meters and 70 cm. The only advice I can give is to not try to monitor two frequencies that are related by the intermod equation.

Attach antenna and power, plug in the control head, turn on the radio by rotating the volume knob past the "click" and adjusting for a comfortable level, adjust the squelch knob until the "rushing" sound just stops. Now press the PTT switch on the side of the microphone and talk. Release the switch to listen. (These radios were designed to be operated by *cops* for heaven sakes, they can't be that complicated.)

That's right, the FCC doesn't require the level of copy from amateurs that
is required from military or commercial operators, and never has. My test
in 1963 consisted of 5 letter code groups, sent and received, though I
understand some field offices were using plain text tapes on their
Instructographs. Since the amateur service is supposed to be "self training",
the exams are merely entrance exams. You're not expected to have developed
complete mastery until you've actually done the "learning by doing" on the air.

Don't count on that. There are many rumours here at Finland, that
it's not going to take place. There might be some troubles getting
it valid for DXCC and if it's not qualified, Martti will not go.
These are just rumours from Finnish cluster-network!

On the other hand it is a very efficient code. Since it is variable lenght
it is kind of a built in compression. The most used letters have the fewest
elements. It is much more efficient than ascii, baudot and other fixed
length codes. It is also very precise as toi length and timing by
defintions. If it is machine sent it is one of the best codes around and was
created many years ago.

>10 is the odds of picking the right answer at random (1/4) 7 times (1/4 ** 7).
>or about 1 in 16384.

Actually, now that you mention it, the odds of getting at least
7 out of 10 in a 4-choice multiple-choice test are much better:
about 1 in 285.
To get the right odds you have to add the probability of
getting 7 out of 10, 8 out of 10, 9 out of 10, and 10 out of 10.

For 7 out of 10, the odds are (.25^7)(.75^3) for *one* combination
of right and wrong. (One combination might be getting the first 7
right and the next 3 wrong. Another combination might be getting 1
wrong, 5 right, 2 wrong, 2 right.) To figure the total possible
combinations of n things taken r at a time you need to figure
n!/(r!(n-r!)). For 10 things taken 3 at a time, there are
10!/(7!3!), or 3628800/(5040*6), or 120 possible combinations. So
the total probability of getting 7 out of 10 is 120(.25^7)(.75^3),
or 1 in 323.6.
For 8 out of 10, there are 45 combinations. The probability is
45(.25^8)(.75^2), or 1 in 2589.
For 9 out of 10, there are 10 possibilities. So 10(.25^9)(.75), or
1 in 34,952.
There's only one way to get all 10 right, so the odds of that are
.25^10, which is one in a million.
Add them all up and you get .0035057, or 1 in 285. You still
better learn *some* morse, I think.

Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

I have made some small changes to the directory structore on World
(ftp.std.com).

The following directories have been renamed as follows:

pub/hamradio/ARRL => pub/hamradio/arrl
pub/hamradio/BARC => pub/hamradio/barc
pub/hamradio/Incoming => pub/hamradio/incoming
pub/hamradio/General_Info => pub/hamradio/general-info

As a side note, there is now an satellite tracking program available for
Atari users. Check out pub/hamradio/atari/satellite/atari_sat-tracker.lzh

If you have any questions, comments, problems, or anything else, please
let me know.

73,
Scott

the exam was plain text. i was one of the idiots that came into
the Dallas office of the FCC and copied all 5 minutes without a
single error and then have the badge wielding examiner announce
same to the entire group of 40 or so testees that fact.

those that passed the receiving then got to come up front and send
to the group. that was interesting and you had to use a straight
key. imagine if you will (twilight zone) - no bug, no paddles with
iambic keyer (this was before iambic anyway ;-)), and certainly
no keyboard.

dit dit

Morse selected his letter frequencies by looking at the relative abundances of letters and numbers in a typesetter's box. That's OK for the rather stilted written English of the period, but isn't so good for the QSO English hams use on the radio. Example: Take the QSO English phrase PSE QSL. That's 49 bit times in async Baudot, 49 bit times in sync ASCII, but it's 59 bit times in Morse. A bit time being defined as the shortest element in each case. They're all the same in ASCII, or Baudot, and the dot is the shortest element in Morse. Now if we want signal reports, UR RST 599 in async Baudot is 77 bit times, in sync ASCII it is 70 bit times, in Morse it's 93 bit times. Doesn't look like very good compression to me. If hams used 'E' signals instead of 'Q' signals, and never used numbers, the comparison might be a tad closer. :-)

I've been using it for about 10 years. Had a 120' Rohn 55 tower guyed with Philly. Now have a 55' Rohn 45 tower using it for guys. I wouldn't use anything else.

Just make sure you use the right Philly for the tower and follow the instructions. Use some steel guy wire on the lower ends to prevent vandalism, fire damage, etc. The main difference I find is that Philly can be cut (its not easy, but it can be cut). So you need to be a bit more carefully when installing antennas, cranking over the tower, etc.

>Can anyone help?

>Thanks much in advance.

The Comet "Miracle Baby" CH-32 1.75 inch long stubby duck is what you
want. Designed for 2 meters and 70 cm. AES in Milwaukee has them
for the unbelievably low price of $33.95!! ;-)) Perhaps a 50 ohm 5 watt
carbon composition resistor would provide equivalent performance?? ;-))

Oh...

Why is it called the "Miracle Baby"?? As someone else here once said,
"If you can hit the repeater with this baby, it's a @!*!ing miracle!"

Looking in the ARRL Handbook I see that "they" have determined that the
average English plain language word is 50 units (dit lengths) long. It
also says that the word PARIS exactly matches this length. The
formulas they give are: wpm = (dots / min) / 25, = 2.4 * dots / sec.

> On the USENET, no commercial activity is allowed. That means that
>you cannot post advertisements for your company, or for a product you
>wish to market, etc. Anything you will be making a profit on that
>contributes to your steady income is not allowed.

There is nothing which says you can't post commercial ads, although the usual response to something which is a blatant ad rather than a product announcement is a load of flames.

Bits of the net (usually those with a government subsidy) have rules on acceptable use, but much of it is paid for by commercial interests and so why shouldn't they use it (subject to thermal overload as mentioned above).

An example would be comp.dcom.modems, where a company might post a technical spec for their new product.... in theory it is advertising, but provided there is no marketing hype, most people are happy to see such announcements.

One-off ads by individuals are OK, but as mentioned, please stick to the proper newsgroups where possible.

Dave

2737. RESULT: sci.geo.satellite-nav passes 452:16

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-09 23:06:30 UTC
From: rdippold@qualcomm.com
Message-ID: <sci.geo.satellite-nav-RESULT@uunet.uu.net>
Source record: 269939
Cross-posted to: news.announce.newgroups,news.groups,rec.autos.tech,rec.backcountry,rec.boats,rec.radio.amateur.misc,sci.aeronautics,sci.engr.civil,sci.space.tech,rec.aviation.products,rec.aviation.piloting,sci.geo.geology

RESULTS
unmoderated group sci.geo.satellite-nav passes 452:16

There were 452 YES votes and 16 NO votes, for a total of 468 valid votes.
There was 1 invalid ballot.

For group passage, YES votes must be at least 2/3 of all valid (YES and NO)
votes. There also must be at least 100 more YES votes than NO votes.

There is a five day discussion period after these results are posted. If no
serious allegations of voting irregularities are raised, the moderator of
news.announce.newgroups will create the group shortly thereafter.

Newsgroups line:
sci.geo.satellite-nav Satellite navigation systems, especially GPS.

This vote was conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Andy Arkusinski <arkusinski_andy@si.com>.

CHARTER

This will be an unmoderated newsgroup.

SCI.GEO.SATELLITE-NAV was chosen because the focus of this group is on
navigation. The SCI.SPACE hierarchy deals with various aspects of
space exploration and use, but this newsgroup deals mostly with
terrestrial applications. The fact that the space segment is in space
is almost incidental to the focus of the newsgroup.

SCI.GEO.SATELLITE-NAV will allow a centralized location for discussion
of global navigation satellite systems (GNSS). The charter
specifically includes the US Global Positioning System (GPS) and
Russian GLONASS, but is also open to discussion of other existing and
future satellite positioning systems.

Some topics that fall under this newsgroup charter are:
* Technical aspects of GNSS operation.
* User experiences in the use of GNSS.
* Information regarding GNSS products.
* Discussion of GNSS policy (such as GPS
selective availability).
* Extensions to basic GNSS technology, such as
differential GPS and pseudolites.
* Navigational uses of satellite systems whose primary

purpose is not navigation, such as a communication
satellite net.

Examples of topics that would not fall under the group charter are:
* Other satellite systems such as communications and
intelligence gathering, except for navigational uses of
such systems.
* Discussion of space policy in general.
* Discussion of areas that may use GNSS, such as
surveying, sailing, or aeronautics, except as they
directly relate to use of GNSS.

GPS, in particular, has turned out to be a technology with a great
deal of synergism with many fields. GPS is used, not only for
military positioning which was the original purpose, but in
applications as diverse as entomology and film making. A major intent
of this newsgroup is to share the uses to which GNSS technology is
being put, thus inspiring even more innovative uses.

While part of the SCI.GEO hierarchy, this newsgroup does not exclude
non-terrestrial uses of satellite navigation. Use of GPS to determine
space vehicle position is within the charter.

This group is also intended to function as a resource for newcomers,
who can post their questions and receive help from others who have
passed that way before.

If you're going to engage yourself in this nonsense, at least take the
time to come up with something original.

But thanks for playing. Even lame-flamers need some encouragement from
time to time.

Nice try with the 435 inuendo. I even sent you e-mail about that. Do you
think I would lie to you about where I operate? Ask Dana.

2739. [News] Auctioning Rules set up by FCC

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-09 23:18:13 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CMF7EE.Ly1@news.Hawaii.Edu>
Source record: 269941

Thought this might be of interest to everyone. If 11M goes up for bid
lets each kick in a few bucks to win it back...

Jeff NH6IL

****

WASHINGTON (AP) -- The Federal Communications Commission took a
first step Tuesday for setting the ground rules by which businesses
can bid for certain chunks of the airways.
The FCC adopted ``generic'' rules for auctioning radio
frequencies for a variety of new services, including the next
generation of mobile telephone service called personal
communications service.
The rules will:
-- Allow several auctions to be conducted at the same time.
-- Require $2,500 as a minimum up-front payment for parties to
participate in the auction.
-- Set deadlines for payments on winning bid.
-- Set aside a portion of the frequencies to be bid on by women,
minorities, rural telephone companies and small businesses.
FCC Chairman Reed Hundt said the rules set the stage for ``the
most important disposition of public property'' since the Oklahoma
land rush.
More detailed rules for specific services -- notably lucrative
personal communications service licenses -- will be decided later
this year.
Companies obtaining personal communications services licenses
will be able to offer consumers the next generation of mobile phone
service, in which the number travels with the phone's owner.
The FCC is exploring all options -- electronic, oral and paper --
for submitting bids, said Robert Pepper, chief of the FCC's Plans
and Policy Office.

>(considerably shorter than the ft-470 ant) and an MFJ speaker mic.

>: Why is it called the "Miracle Baby"?? As someone else here once said,
>: "If you can hit the repeater with this baby, it's a @!*!ing miracle!"
>I could hear the 2m machine 5 miles away with it, but I couldn't get in!

>cheers,
>Dan
>--

I use a "Miracle Baby" in and around Boston. I have no problem hitting repeaters that are on very high buildings (the Boston ARC, the New England Telephone ARC). I find that I can get into these repeaters from five to ten miles away. With other repeaters, it gives me marginal performance.

Most of my antennas, a stock ICOM, a Diamond RH77CA (5/8 wave whip), the miracle baby and a Cushcraft AR270 all pick up repeaters that I can't hit with my radio. I normally receive the Derry, NH repeater on my HT, but I can't hit it from Boston.

In a nutshell: the "Miracle Baby" is a good antenna for use in an urban area where you have good coverage repeaters. That's my $0.02.

Ha ha - I see you deleted what you wrote about me (something about a `deranged professor blowing up a restroom' - so who started this `nonsense', Angus? When are you going to learn that if you post something about me I'll post back?

I've got to go find what you originally posted that prompted me to write above. What's that old expression? `You can dish it out but you can't take it'? When you finish, so will I.

> But thanks for playing. Even lame-flamers need some encouragement from
> time to time.

Yeah, your `body parts' newspaper article was rather lame.

> Nice try with the 435 inuendo. I even sent you e-mail about that. Do you
> think I would lie to you about where I operate? Ask Dana.

But you've got the .435 personality! Speaking of inuendos, do you actually believe that I'd blow up a restroom with plastic explosives? You've been breathing too much of that Compton smog (oxygen starvation).

My offer still stands: Let's take this to email so the rest of the good folks on .misc don't get pissed. This has REALLY gotten boring and childish.

73 Jeff#2 (The SLOW Learner),
Jeff#1 NH6IL

first step Tuesday for setting the ground rules by which businesses
can bid for certain chunks of the airways.
The FCC adopted ``generic'' rules for auctioning radio
frequencies for a variety of new services, including the next
generation of mobile telephone service called personal
communications service.
The rules will:
-- Allow several auctions to be conducted at the same time.
-- Require $2,500 as a minimum up-front payment for parties to
participate in the auction.
-- Set deadlines for payments on winning bid.
-- Set aside a portion of the frequencies to be bid on by women,
minorities, rural telephone companies and small businesses.
FCC Chairman Reed Hundt said the rules set the stage for ``the
most important disposition of public property'' since the Oklahoma
land rush.
More detailed rules for specific services -- notably lucrative
personal communications service licenses -- will be decided later
this year.
Companies obtaining personal communications services licenses
will be able to offer consumers the next generation of mobile phone
service, in which the number travels with the phone's owner.
The FCC is exploring all options -- electronic, oral and paper --
for submitting bids, said Robert Pepper, chief of the FCC's Plans
and Policy Office.

The same thing happened between Bob & AEA a few years ago. They
couldn't come to an agreement about something, & so Bob terminated his
relationship with them & tried to make a big deal about it via electronic
systems such as Internet, Compu$erve, etc.

Scanning thru the mess once might make me have thoughts about the
company, but after two times, I wonder about Bob...

Well actually, I don't care about Bob, but I just think people
should be aware of his track record concerning this type of thing.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

09 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 09 MARCH, 1994

NOTE: Stratospheric warming exists. A large warm region exists from central
and northeastern Siberia to Canada and the adjacent arctic with a
temperature increase of about 30 degrees C at 10 HPA over the Canadian
Arctic. The temperature gradient is reversed between 60N and the pole
from 10 HPA upwards into the upper stratosphere.

NOTE: The Effective Sunspot Number for 08 MAR 94 was 23.0.
The Full Kp Indices for 08 MAR 94 are not available.
The 3-Hr Ap Indices for 08 MAR 94 are not available.
Greater than 2 MeV Electron Fluence for 09 MAR is: 1.1E+09

SYNOPSIS OF ACTIVITY

Solar activity was at very low levels.

Solar activity forecast: solar activity is expected to be
low levels. Region 7685 (S08W3E1) appears to have the greatest

potential of producing a C-class flare.

The geomagnetic field has been at unsettled to major storm levels. Periods of severe storm levels were observed at high latitudes.

Geophysical activity forecast: the geomagnetic field is expected to be mostly at active levels. Minor storm conditions are expected during local night time.

Event probabilities 10 mar-12 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 10 mar-12 mar

A. Middle Latitudes
Active 30/30/15
Minor Storm 25/25/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 25/25/15
Minor Storm 30/30/10
Major-Severe Storm 15/10/10

HF propagation conditions continue to be poor to very poor for transpolar and transauroral circuits, particularly during the local night hours. Middle latitudes are also experiencing minor signal degradation, but not as seriously as the higher latitudes. Conditions are expected to begin improving on 11 or (preferably) 12 March. The high and polar latitudes will likely take several additional days to recover from this activity.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

While we are on the subject (thanks for bringing it up), I have 70' of
Rohn 25 to put up this spring and had thought about making the top
half of the top set of guys Phillystran. Does anyone have any good
ideas of how to join the upper Philly with the lower steel? Or, is
this more trouble than it's worth. I already OWN the new steel, and
I'm trying to save a little $$ on the Philly.

BARTG * GB2ATG * NEWS * BARTG * NEWS * GB2ATG * BARTG
This is the - British Amateur Radio Teledata Group - News Broadcast Service
for all Amateurs and Short Wave Listeners interested in RTTY Amtor, Pactor
and Packet Radio.

This news is broadcast during the first full week commencing Monday each
month, to the following schedule..

Evening transmissions at 1930 GMT. on 3.584 MHz. Mark. +/- for QRM.
RTTY on Monday-AFSK, Wednesday-AFSK and Friday-FSK
Pactor-FEC on Tuesday.
Amtor-FEC on Thursday and Saturday.

Morning transmission at 1000 GMT. on 7.041 MHz. Mark. +/- for QRM.
RTTY on Sunday-AFSK.

An edited version of this bulletin is available on the Packet network as a
BARTG at GBR. file thanks to: Andy (G3ZYP) at GB7MXM.#36.GBR.EU.

It is also posted on the "INTERNET" system via the INFO-HAMS list on UCSD.EDU.
thanks to Iain (G6ARO) who is available on the "JANET" network as
Iain@HUMBER.AC.UK

News for March 1994. Bulletin No. 015. (all times are GMT).

BARTG Information.
Due to pressure of other work, Ian Wade (G3NRW) is unable to continue editing
"Packet International" and has resigned his position on the committee. The
Packet pages will continue under another author.

Andy (G3ZYP) has volunteered to adopt the work of BARTG Publicity Officer.
This will relieve some of the pressure from BARTG Secretary Ian Brothwell
(G4EAN).

RTTY DX Activity.
14 MHz.
6W6JX and ZL3AFT 0830,

ZP5FGS 2200
S92ZM 2300

21 MHz.
CU1AC 1630

Pactor Activity.
3.5 MHz.
T91EZG 2030

QSL Information.
4U1ITU via IK2NCJ.
C91AI via CT1DGZ.
OD5PL via HB9CRV.
3Y0PI via AA6BB.

Contests.
The BARTG VHF/UHF RTTY contest open to all in CQ zones 14 and 15 runs from
1000 until 1500 on Sunday 10th April.
144 - 432 - 1296 MHz bands excluding repeaters.
Exchange message is Time of QSO (GMT), RST report and Maidenhead Locator.
Score in accordance with the distance chart for 144 and 432 MHz.
0 to 50 Km = 1 Point.
50 to 100 Km = 3 points and pro-rata.
For 1296 MHz score 1 point per Km.
Separate classes for (A) Single operator. (B) Multi operator and
(C) Short Wave Listener.
Entry logs must be post marked no later than May 9 to qualify.

Full rules and copies of sample log and summary sheets available from the
BARTG Contest Manager by enclosing a SASE A4 size to:-
John Barber (G4SKA) P.O. Box 8, Tiverton, Devon EX16 5YU.

The SARTG Amtor contest starts Saturday April 16 with 3 periods of operation.
0000-0800 Saturday April 16.
1600-2400 Saturday April 16.
0800-1600 Sunday April 17.
All 5 HF bands 80 to 10 metres. Stations may be contacted once per band for
QSO points and multiplier credit.

This contest is Amtor only using FEC mode for CQ calls and ARQ for contest
exchange. Contest exchange in any other mode is subject to disqualification.

Exchange message is RST - Own name - and three digit QSO serial number
starting 001.

Classes:
(A) Single operator all bands.
(B) Single operator single band.

(C) Multi operator single TX all bands.
(D) Short Wave Listener all bands.
A single operator all band may also enter a single band class.

Scoring:
(5) Points for QSO with own country.
(10) Points for QSO with other countries in own continent.
(15) Points for QSO with other continents.

Multipliers:
Each country on the current DXCC countries list including the first contact with - W - VE - VK - and JA - plus each call district in - W - VE - VK - and JA - count as separate multipliers on each band.

Total score = Sum of QSO points times sum of multipliers on each band.

Short Wave Listeners use same rules but based on stations and messages copied.

Logs must be received by June 10, 1994 and must contain a separate sheet for each band plus an overall summary sheet. Copies of the full rules are available from the editor with SASE please.

Send completed logs to:
SARTG contest manager.
Bo Ohlsson (SM4CMG). Skulsta 1258, S-710 41 Fellingsbro. Sweden.

Thanks this month to..
G3ZYP and G4BMK.

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

If I recember correctly, Bob had a business relationship with AEA; I don't recall that he mentioned anything about a business relationship with CT. What I *do* recall is that when Bob inquired about an API for the CT card, they offered to sell it to him for $5K. Yikes!

I think Bob was trying to make a point about open versus closed systems. The open system vendor assumes that it will realize more revenue by making its API available at a reasonable cost (or none at all) because developers will write applications that will generate more harware sales, while the closed system vendor views its API as an alternate source of revenue. Unfortunately, developers who pay $5K for an API generally sell their software for a pretty hefty sum, and this certainly won't benefit anyone with regard to the ham market since, as we all know, hams are notoriously tight with a penny.

Personally, I'm with Bob on this one. My only application to date for sound is to have my PC make cute little noises when I drag a file to the trash can; I'm quite satisfied with the PC speaker driver for this purpose, and as a result I don't currently own a sound card. I'll buy one just as soon as some good ham-oriented freeware and shareware apps become available, and I'll buy whichever card that software runs on. After reading Bob's message, however, I kinda doubt that it will be a SoundBlaster16 ASP.

Todd, KB6JXT (setting down my tightly clenched checkbook
long enough to type this message.... ;-)

2760. Alliance 5-wire Rotor Motor Questions

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-10 14:59:01 UTC
From: galen@picea.CFNR.ColoState.EDU
Message-ID: <1994Mar10.145901.65354@yuma>
Source record: 269962
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I've accquired an Alliance rotor motor with no control box. The rotor
takes 5 wires, has the rotating mast thru the body and the mast top clamp
on the side of the case. I've been told this style is often used as an
altitude rotor on Satellite setups.
Questions:
1. What voltage does it take to turn the motor? AC or DC?
2. WHat are the pinouts for the five wires?
3. What is the model number or other ID's? (nothing on the case but Alliance).

I can open it up to get the pinouts, but I don't want to burn it out with
the wrong voltage etc.
I'm planning to use it to turn small VHF/UHF antennas.
Any positive responses are greatly appreciated!!!!!
Galen, KF0YJ

2761. Re: Ten-Tec question

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-10 15:15:34 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CMGFq0.7GD@hpqmoea.sqf.hp.com>
Source record: 269963

Ten-Tec aren't alone, a great many other radios sport decorative knobs labelled "noise blanker" which have no discernable effect. I'd say the same of my IC765.

Perhaps the marketing departments of all the manufacturers, in unison found that you couldn't sell a rig without a noise blanker, but that it didn't matter if the noise blanker didn't work ?

I find that the blanker on my 2 metre multimode mobile DOES work, but then that is the sort of radio that really needs one.

Cheers
David GM4ZNX

2762. WWV time station freq

Newsgroup: rec.radio.amateur.misc

Oh, that's easy. We'll give 'em a no-code license and send 'em up to the VHF/UHF bands (oops - forgot this isn't .policy).

While we're on the subject, until recently I had an older FT-101 xcvr - it was an early 70's model - analog tuning and solid state except for PA tubes in the final. The band switch included an 11 meter position. This 11m slot has always perplexed me, since the amateur service lost 11m back in the 50's; why would a 70's era rig still carry 11m?

You forgot to mention the guy who calls his wife-mate on two meters to tell her his will be home in two minutes. Or the average how is the weather, pain in the back, etc. Most of two meter stuff is like that.

After about a year of being in ham radio, I talked to a guy on 80 meters that told me about his experiences in the Merchant Marine during WWII. He got torpedoed twice or three times as I recall. Now that was a more interesting conversation.

When the sunspot cycle was up I used to get on 15 meters and ragchew with the Europeans. That was alot of fun and you meet some interesting people... and also work some nice DX.

I'm still waiting for my card on ZS8MI and my QSO goes back to May or June
1993.

That is the truth and always has been. You can still pas the test with one minute of solid copy. If you don't get the 70% correct then they are to check for a minute of solid copy. Either one will pass the test.

When I got mine the one miute solid copy of 5 was the only way. It was tough.

2787. Info on Alinco mods?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-11 01:45:28 UTC
From: georges@earlham.edu
Message-ID: <1994Mar10.204543.1362@earlham.edu>
Source record: 269886

I recently bought a 2nd hand Alinco DJ-F1T hand held. The manual says
that it can be modified to do aeronautical band AM between 118 MHz and 130
MHz, but Alinco wouldn't tell me how to make the modification on the phone.
They said there are books that tell how to do it, but they can't tell me
since I am not okayed by C.A.P./MARS.

So, where do I get these books? Or better yet is there some place on
the Internet where such info is available?

Also, how complicated and ticklish are such mods?

Any help/ideas/opinions welcomed.

In a word, marketing. How else are the CB's supposed to know that the FT-101
works on 11 meters if it isn't marked? It's a REAL popular part at the swap
meets around here. Usually selling for more than it did when it was new.

: >: how many milliseconds long a dit at 18 wpm is supposed to be?
: >
: Then David R. Tucker wrote:
: >You're right. There is a more exact standard.
: >
: >The average English text word length is 50 units, which is the same as
: >the work "PARIS", and that's considered the "standard" word length.
: ...

: You've make quite a leap in going from PARIS to 50 units! What
: asumptions did you make about dash per dot ratio? And how many
: dots per space?

Well, I assumed he understood this from another source, since he
didn't ask that question, and could look it up in the source I gave.
Still:

dit = 1 unit
dah = 3
intracharacter space = 1 unit
space between characters = 3 units
space between words = 7 units

(BTW, a fast way to figure out the number of units in a text is to
count all the dits, dahs, characters, and words. Then

Length = 2*(dits+chars) + 4*(dahs+words)

The proof of this is left as an exercise, but it works.
PARIS : 10 dits, 5 letters, 4 dahs, 1 word = 50 units. Or, you can
count all the units up.)

: Also some code is sent Farnsworth (sp?) where the characters are
: sent at one (faster) speed while the spaces between words are spread
: out.

Between characters and between words. I assume you keep the
word space:character space ratio at 7:3, extending the duration of
word spaces and character spaces so that when you combine everything,
PARIS comes out at the speed you desire, despite faster characters.

This, the formula I gave before, and a bit of algebra should give a formula for char and word spaces for any overall speed and character speed specified. Then it's plug & chug.

: Your final conclusions are approximately correct but you need
: to account for the above spacings.

"Approximately"??? 66.6666666666666... ms for a dit length at 18 wpm is approximate?? Boy, you're a tough one! :-> (Maybe, "correct as far as it goes"?)

: By the way to the original poster: the best to write a program that
: sends code is to start with the dot length. Then make all the
: other ratios a function of that dot length. (e.g. dash-dot ratio,
: space length in units of dots, and character speed versus word
: speed). Then adjust the ratios until you get a pleasant sounding
: "fist."

: 73, Ned Hamilton, AB6FI.

You could also allow the user to vary those ratios to taste, as an option.

Sorry if it wasn't clear. Happy ... coding!!! :-) (groan ...)

-drt

Look at what the cops are driving. Ford Crown Victorias seem popular
with them, as do Chevy Caprices. Order your's with the same fleet codes
that they use and you'll have a car that works well with radios. (It'll
also have the heavy duty electrical system, cooling system, and suspension
of a cop car.) Get the same color scheme that they use for their unmarked
cars too, that way the antennas won't draw suspicion. (And you may avoid
some tickets.)

> idiosyncrasies?
> Thank you.

I have. You can use an AX25 packet driver but need a version of KA9Q/NOS
that supports it. I got a copy of ax25drv.zip by Pawel Jalocha,
SR9VRC, Jan 1993. I believe I got it by sending this message
to file-request@tapr.org :-

GET /pub/packet/ax25drv.zip
QUIT

Here is an excerpt from the doc:

Q: How to start quickly ?
A:
1. Start the ax25.com - most important parameters are COM base and irq.
an example for COM1: ax25 -B3f8 -I4
Now the driver takes control over the RS232 port and stays resident
waiting for NOS orders...
2. Start KA9Q NOS (you need the one supporting packet drivers)
and then type in:
ax25 mycall <your callsign>
attach packet 0x60 ax25 5 512
trace ax25 111
you should see packets being received now in trace window
In most NOS versions you press F9 to get there.
3. Try to connect to another station by typing:
connect ax25 <callsign>
or split ax25 <callsign> (split window session in JNOS)

This setup in far from complete - it's just to see whether the driver
cooperates with your hardware and it only allows you to work native
AX.25.

A glance at the ITU Callsign prefix allocations will show that
the United States is assigned "A" prefixes in the range AA through
AL, so a A1A call is not permitted under current International
agreements. The W,K and N series can be used as single letter
prefixes because the US is allocated WAA-WZZ,KAA-KZZ,NAA-NZZ.

How about a Suburban with a Diesel engine? Only interfering electronics
you should have to worry about is the alternator. And it has tons of
space for antennas.

Well, guys, don't forget two crucial pieces of information about that call:
1) It is not a US callsign, it is Jordan, in the middle east;
2) JY1 happens to be King Hussein, who has done much to promote amatuer radio in the middle east and throughout the world. He is also the ruler of those issuing callsigns. Therefore he gets to pick the shortest and most prestigious call for himself. His wife Queen Noor has the call JY1AA.

FYI, King Hussein visits the USA regularly, including both the Cleveland Clinic and Mayo Clinic for health care. He has been heard locally on the bands during his visits, and I hope to hear him speak some day at an amateur club meeting.

> out.

It may sound that way because most amatuers do not properly time the
intervals between characters or words. The computerized sending programs
normally do it properly, so if it sounds unnatural to your ears, the others
you've been listening to might learn to send more accurately (slam not
intended). The "Farnsworth" method often involves a person using a computer
keyboard with the speed set faster than he can type (CT's minimum 22 WPM is
a classic example).

> Your final conclusions are approximately correct but you need

> "fist."

The ONLY proper ratio for dash to dot is 3:1. If the original sender is
having problems, the timing constants within his rig may be shortening all
characters, thereby stretching the ratio beyond 3:1.

Totally agree. I to use it in the house and in the field, which includes
disaster communications, (Here in Los Angeles we've had alot of that lately!)
and off road racing. It's had a lot of dust and vibration with out a single
problem.

What I need is a quick release kind of mobile bracket similar to the MMB-37
bracket sold for the FT-5100. That would make moving it from house to car to
truck to box etc etc much nicer. Anybody got somethin' like that?

> It is also if memory serves me right, the only ham rig that is built to
> millitary specs.

Only MIL-STD 810C mechcanical spec which is for shock and vibration using
methods 514.2/VII and 516.2/I. Supposedly the sister radio FT-7400H is the
440 MHz version of the same.

I would a very exspensive radio to be completely built to MIL-STD
But it's the only one I know of that is built to those standards.

Trying to decide between a FT-7400H or a FT-5100.

Hello!
My father and I are going to Svalbard Isl.
March 18 until March 21.
I want to know if my father is in the newest call-book.
Or if I am there.
The reason why I ask is that LA5VK will be the manager
for the "dx'pedition", and I want to know if he is in the
newest call-book.
By the way, we will be operating all bands, including
WARC, mostly on SSB.
This is probably one of the first times JW is activated
on SSB on the new WARC bands.
The WARC bands was opened for SSB for Norwegian amateurs
January 1 1994.

Please help me, I must have the answer before Friday...

de

We will be using this call signs:

JW1BJA TOM (that's me, homecall LA1BJA)
JW5VK INGE (my father, homecall LA5VK)

vy 73 de Tom, LA1BJA

But, *our* perfesser *is* a Ham, and professes to know his code, no
less.

However, I think Prof. Dr. Derek is confusing varieties of home-brews.
The young shoots of the coconut palm make mighty fine "home-brew," but
of the spirits kind, that is. Folks in the South Indian and Malayan
Peninsulas call it Toddy.

A few chugs of that home-brew later, the sea gulls on your deserted
island will all appear to be saying "CQ dah-dit-dididit-dah" to you!

>You've make quite a leap in going from PARIS to 50 units! What
>asumptions did you make about dash per dot ratio? And how many
>dots per space? 73, Ned Hamilton, AB6FI.

Hi Ned,

All this is spelled out in detail in the Morse Code section
of the ARRL Handbook. PARIS is exactly 50 units! The assumptions
are also spelled out in detail there. What might help the original
poster is:

ten WPM is 120 mS per unit... 12 WPM is 100 mS per unit... etc.

SB DX ARL ARLD014
ARLD014 DX news

The items in this week's bulletin are courtesy of Rolf, DL7VEE, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral in QST. Thanks.

PRATAS ISLAND. The latest news is that the planned DXpedition for this month has been scrubbed.

LACCADIVE ISLANDS. VU7LI continues both his geological surveys and QRP operation for a few more weeks.

KERGUELEN ISLAND. Listen for Pierre, FT5XJ, on 14188 kHz around 0330 and 1600z.

NEPAL. Equipment donations by DJ6SI and DJ6JC, with the help of EUDXF, DL9WVM and WB6ZUC, have put Satis, 9N1AA, and Surish, 9N1HA, on the air. QSL via PO Box 4292, Kathmandu, Nepal.

TONGA. Bob, W7TSQ, is island hopping as A35SQ around the main island of Tonga, much to the delight of IOTA chasers. He should be active until March 15. QSL via W7TSQ.

NORTHERN COOK ISLANDS. Amy, ZK1AT, has been on 3787 kHz at 0630z, 7205 kHz around 0715 and 0900, 14195 kHz at 0430z, 18150 at 2200, and 24950 at 2315. QSL via WB6EQX.

FERNANDO DE NORONHA ISLAND. Peter, PY5CC, is QRV as PY0FM until April 1. He prefers SSB, 160 and 6 meters, but also operates some CW and satellites. QSL his home call.

FRANZ JOSEF LAND. 4K2MAL has been quite active lately. Check 10104 kHz at 2230z and 0400z, 18072 kHz at 1645z, 14182 kHz at 1415z, and 7004 kHz around 0245z.

GUYANA. Larry, 8R1/N4VA, should be active for another week. His on the air times are fluid, so listen to the 20 and 15 meter IOTA frequencies, 14260 and 21260 kHz, for details.

NORTHERN MARIANA ISLANDS. JA1CMD will sign KH0/JA1CMD from March 27 to April 1, mainly on 80 and 40 meter CW. QSL to CBA.

COCOS ISLAND. Members of the OKDXA are planning a big TJI9 DXpedition for May.

THIS WEEKEND ON THE RADIO. Both the Kentucky and Wisconsin QSO Parties are this weekend. The Kentucky event, sponsored by the Paducah ARA, is from 1500z March 12 to 0300z March 13, and 1500z to 2400z March 13, both phone and CW.

The Wisconsin Party is sponsored by the West Allis RAC and runs from 1800z March 18 to 0100z March 14, both CW and phone.

The exchange for both events is signal report, state, province or country. Kentucky and Wisconsin stations will send signal report and county for their exchange. Full details/rules appear on page 111 of February QST.

2816. Where can I find "netrom"?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-11 17:39:41 UTC
From: dgf@netcom.com
Message-ID: <dgfCMIH26.42A@netcom.com>
Source record: 269917

A friend of mine (nq9i) wants to connect his PC though his TNC to a TCP/IP-based frequency using his PK-232. What software does he need in his PC? What firmware would he need in his PK-232 (it has firmware about 4 years old)?

Sorry if this is a FAQ...

Thanx!

73 Dave WB0GAZ dgf@netcom.com

: >able to find much on roof towers. What I want to be sure (or at least as
: >sure as possible) of is that if the antenna/tower gets hit, the lightning
: >strike doesn`t arc through the house, etc.
: >
: >Some specific questions I have are:
: >
: >1. What size of ground lead(s) to use for the tower? I realize that
: >bigger is better but the cost of enormous cable is prohibitive. What
: >is reasonable if you EXPECT or PLAN on a direct hit?

: The NEC says number 8 solid is the minimum size for the downlead of
: a lightning rod. Consider this the smallest wire you can use. Since
: lightning is a pulse that has RF components through VHF, skin effect
: matters. A better downlead is 5 inch wide copper flashing run as straight

: as possible to ground, but in no case having a 90 degree or sharper
: bend in the path.

: >2. How many?

: If you use the correct size, and do the bonding correctly, one is
: sufficient. If you aren't going to be able to inspect the run
: frequently, you might consider paralleling a number 8 solid wire
: with the 5 inch strap so that if corrosion opens one connection,
: you will still have a better path to ground than through your
: roof.

Also concider using old RG-8 & RG-11 with centers & sheilds tied
together as grounding cables. Lots of this coax throwed away needlessly.

(John)

k
: >3. What paths do I run them? The obvious answer would be the shortest,

j
: except that the shortest path is on the opposite side of the house from
: the shack and the feedlines. Would the resulting 'cage' effect be good
: or bad?

: Normally, you want the shortest and *straightest* path to ground. However,
: ground loops can be disasterous. Make up your mind to establish a single
: ground point somewhere on your property and connect all ground runs to
: this one point. Make sure the utility grounds are also bonded to this
: point. Don't ever depend on earth conductivity to close a ground circuit
: and don't ever use a feedline shield as a ground conductor.

: It's ok to have multiple grounds, but they must tie to the single
: point ground via low inductance, high conductivity cabling in a
: *star* configuration, not in a daisy chain. Daisy chaining grounds
: is a recipe for disaster.

: Setting up a ground cage is an extreme measure of protection. To do
: it right is not simple. Doing it wrong can be dangerous. If you can't
: analyse all the current paths properly for ground loop effects, don't
: do it.

: Bring *all* cables into your shack via a "ground window", that includes
: power and telephone. A ground window is a single small area, usually a
: rack panel, copper plate, or the like, that each wire is attached to via
: an arrestor of the proper type for that kind of cable. The ground window
: is then connected to the master single point ground by a heavy strap or
: cable. This assures you that all cabling entering the shack will be at
: near the same potential during a strike (plus or minus the breakover
: voltage of the arrestors). With quality arrestors, you shouldn't ever
: have a voltage differential of more than 200-400 volts across your
: equipment. Most equipment will tolerate this kind of voltage for the
: few milliseconds required. Note that your entire shack may be elevated

: to several thousand volts above ground due to the resistive drop of
: your single ground lead, but as long as *every* part of the shack is
: elevated the same amount, no net current can flow.

: >3. Do I need to stand them off from the roof?

: It's generally not necessary, but it won't hurt. Remember that a direct
: lightning stroke will typically flow 4,000 amperes or more for several
: milliseconds. The wire can get quite hot. I've seen number 12 solid
: *vaporized* by a lightning stroke. That's why you want to use at least
: number 8 wire or heavy strap.

: >4. Do I need to attach to each leg of the tower?

: That depends on the tower construction. If the tower is welded, connecting
: to one leg is sufficient. If it is bolted or riveted, inspect it carefully
: for loose connections and use bond straps to make it a single conductor.

: >5. What about the guy wires?

: Generally, *don't* ground the guy wires. If the tower is going to carry
: an HF antenna, you'll likely want to break guys with insulators anyway
: to avoid pattern disturbances.

: >6. Anything else I should know?

: A single ground rod is not an effective ground in most soils. Use
: at least three no closer than 4 feet apart in a triangular arrangement.
: Bond them all together with your heavy strap. If you have *metal*
: underground water piping, tie to that too. Remember, *star* configuration.
: No ground should connect to another except at the *single* point
: connection. And no downlead should connect anywhere but at the single
: point.

: Always *mechanically* bond ground wires and straps. Don't depend on
: *any* soldered connection. Solder *will* melt when lightning strikes.
: The NEC says there should be *no* splices in a ground run. That's perhaps
: a bit extreme. A *good* mechanical and electrical splice should be ok,
: but rather safe than have the insurance company void your claim.

: >I know that there's no guarantee when it comes to lightning strikes,
: >but it is my family in the house and I want to be sure I have done
: >everything I can to protect them.

: That's a good attitude Dave. Lightning kills more people each year
: than any other weather related thing. Besides, the better ground
: field can help your HF signals *every* day.

And no emissions controls. :-(Diesel smoke is a suspension of carbon particles impregnated with the byproducts of combustion, which is small enough to enter your lungs and lodge in the lung walls. Once lodged all those combustion byproducts leach out into your body. Diesel vehicles need dust traps at the very least.

|> 'DANGEROUS', as the folks at the Radisson claim.

Of course, Faith, dangerous here in Dayton, Ohio may be a little different than some other folk's view of dangerous. Downtown Dayton is pretty highly patrolled, just don't cross over 75 to the west (that tends to be a high crime area for us). I thought shuttles ran from one of the downtown hotels (Stouffers maybe?). Perhaps another Daytonian subscriber knows more, but I'll try to find out for you.

Until then, I'm looking forward to showing "y'all" some Dayton hospitality!

>You've make quite a leap in going from PARIS to 50 units! What
>asumptions did you make about dash per dot ratio? And how many
>dots per space?

FYI--the accepted "correct" ratios are 3 to 1. Thus a dah is three times the length of a dit. This same ratio holds in the length of the "spaces" between dits and dahs and longer spaces between characters and then words. Adding this all up, using a dit as the basic length, you should get the word paris lasting 50 dits-lengths.

This is why peole who have some background in music generally have a cleaner fist--it's in the tripletts.

My understanding was that they are not allocated. The only reason we can have N#XXX, W#XXX, or K#XXX is because the US has KAA-KAZ, NAA-NZZ, and WAA-WZZ, whereas whe only have AAA-ALZ. (If they are allocated, it is as a prefix, and thus a person may have A66XX in whatever place it is that has them, but there is *no* A6XX.)

From Tad Cook, KT7H
Seattle, WA March 11, 1994
To all radio amateurs

SB PROP ARL ARLP010
ARLP010 Propagation de KT7H

Coronal holes played havoc with the Earth's magnetosphere again last
week, sending the A and K indices soaring. Conditions were actually
stable from the 4th through the 6th, but were otherwise very
unstable, with frequent reports of K indices around 5 and 6. When
this happens, absorption of HF signals becomes a problem, especially
over polar paths.

Solar flux dropped slowly after peaking just above 100 at the start
of the period. Look for the flux to continue dropping, reaching a
low near 85 around the middle of this month. It will then rise and
peak again near 105 before month's end.

Active geomagnetic conditions may remain over the next few days,
occurring again around the end of the month.

Sunspot Numbers from March 3 through 9 were 122, 80, 86, 101, 80, 80
and 68, with a mean of 88.1. 10.7 cm flux was 100.9, 97.9, 95.7,
95.5, 91.3, 91.3 and 89.9, with a mean of 94.6.

The path projection this week is from Chicago, Illinois to Guyana,
where 8R1/N4VA is operating.

80 meters should be open from 2330 to 1030z, with the best
conditions from 0200 to 0930. 40 meters looks good from 2230 to
1100, with the best shot from 0030 to 0930. 30 meters may be
open on many days almost around the clock, with best conditions from
2230 to 0630. 20 meters should be good from 1500 to 0130, and
17 meters from 1430 to 2300. Check 15 meters from 1600 to 2000.
10 and 12 meters do not look too promising over this path, but check
12 meters around 1630 to 2130 and 10 meters from 1830 to 1930.

I got a variety of responses for a car which would be good for 100 watts or so of HF and 50 or so of 2 meter and 440 radio. Criteria were lack of interference from car into receiver and from transmitter into auto electronics.

Diesels and the Taurus were among those favored. Anyone else have comments on these choices.

Tnx agn Bob

I own and modified two alinco radios a 590 & 560. I had the benefit of
paperwork I got from my local dealer, but when I opened the radios I found
the jumpers that were to be cut were EXTREMELY obvious. They were loops of
orange wire about 1/4 to1/2 inch long connecting two points on a circuit
board. They were the only such wires on the board. I would suspect that if
you open your radios you'll find the same sort of thing.

The Swedish navy's school ship HMS Carlskrona is out on its yearly voyage around the globe. Aboard is as usual several hams. The ships signals can be caught primarily on CW, using these frequencies:

CW: 14.038 and 21.038 kHz
SSB: 14.178 and 21.178 kHz

Right now the ship is in Tokyo, Japan, with a scheduled departure on March 14 heading for Seoul, South Korea, with an expected arrival on March 17.

In a previous article, wstrahl@cbnewsg.cb.att.com (wayne.a.strahl) says:

>I am posting this query for a friend who is considering guying his
>Rohn 60' fold-over tower with Phillistran non-metallic guy cable in
>order to reduce interaction with his low-band slopers and Mosley
>PRO-57A that is mounted on it.

A year ago, I installed a 58 foot Rohn foldover tower with steel guys at the hinge (31 feet) and Phillystran at the top. It works great! Until I put the guys on the upper half, it would really move about in the wind out here in the country. The Phillystran kept the top stable and it does not effect the two inverted V's hanging off the tower.

Nice stuff...

I bought my first rig-with-noise-blanker (TS-940) used, and when I turned it on for some nasty static and nothing happened I figured it was broken. It wouldn't touch anything I tried it on, until one day it took some nasty hash and poof! Gone. When it does work it's amazing. After a while you learn to hear what kind of noise the blanker is likely to be effective on, but there are still lots of marginal cases where it works when I didn't think it would, or vice-versa.

>first half of the 'A's, thus you can't have an A#XXX call. (Or A#XX, A#X)

I realize the callbook isn't the authority, but it show's that A0 and A1
prefixes aren't assigned to any other country. Since the US has AAA-ALZ
then it *might* be possible for the US to assign A0 and A1. Does anyone
know for sure (not just guessing, like me)?

-I had one for a year or so.I sold it to buy an all mode 2M(Kenwood Tr-751A)
I wish I would have kept it.The only thing I didn't like was the modular mike
plug,it's a good idea,but they should sell a 6 foot mike cord for it,not
just that little 2 foot one for packet.Don't they realize that most of the
radios aren't ever going to be used mobile.Buying a RJ-45 crimper for one
mike cord is insane!I bought a cord from Digi-Key that worked ok,but was
too "kinky" for me.Actually,it wouldn't cost them much to just put a cord in
the box.

I'd like to thank all the kind people who have replied to my query both here on the net, and via email.

In summary, everyone agrees that the defining word for wpm is PARIS, and most mentioned that it is in the ARRL book. (I obviously gotta get an up-to-date copy! :_)) Interestingly, no one seemed to know where this standard is enshrined in law or treaty, but I'd assume it's an ITU thing (just 'cause the word is PARIS). It'd be nice to know...

BTW, one email respondant mentioned that the military used a _different_ word, CODEX, which I found interesting. CODEX consists of 60 units, rather than 50, leading to a faster dit-rate at any given wpm, and according to my calculations 60 is a better approximation to the average number of units you'd get if your plaintext was always pure random letters (I count, for an average 5-letter word (5*(214/26))+19 units. This is 60.153846153846...)

In the light of all this, I have written my program to allow the user to pick any of the above "standards" _or_ inform the computer of his/her _own_ preferred defining word. It will even allow the word to have more or less than 5 letters. I have also written it so that the user can have the character rate be independent of the word rate. This gives it the maximum flexibility, and, anyhow it was fun to come up with an algorithm to compute the timing.

So, for example, the user can have code sent with a character rate of 18 wpm, but with more delay between them to achieve a word rate of 5 wpm, with wpm defined by the word "FRED", if s/he wanted. (Not that I'd reccomend such a thing, mind you!) Actually, I have found it useful to learn code with a fast character rate, as it seems to help make increasing your speed easier.

Anyhow, in the spirit of giving back to those from whom you've received, I include below the algorithm that computes the needed timing for all this. The computed values are 2 different dit-units, one used to create the characters' dots, dashes, and spacing within the characters, and the other dit-unit governs the timing _between_ characters and words.

I hope anyone else who decides to program their computer to send code can make some use of all this.

1. Input the defining word.
(example "CODEX")

2. For each _letter_ in the defining word, cound the dit-units needed (_don't_ count spaces between the letters yet!) and sum. Let this be called Q.
(example: "C"=11, "O"=11, "D"=7, "E"=1, "X"=11, sum=41=Q)

3. Multiply the number of letters in the defining word, minus 1, times
3 and add 7 to the product. Call this P
P = [(#letters - 1) * 3] + 7
(example: ((5letters-1)*3)+7 = (4*3)+7 = 19 = P)

4. Let N be the desired _character_ rate (in wpm), and M be the desired _word_
rate (in wpm). N _must_ be greater than, or equal to, M.
(example: N = 18, M =5)

5. Let A = (Q + P) * N
(example: A = (41 + 19) * 18 = 1080)

6. The dit-unit-time for characters (C) is then:
C = 60 / A sec per dit
(example: C = 60/1080 = 0.05556 sec per dit)

7. The dit-unit-time for spacing the characters (W) is then:
W = (60 / P) * [(1 / M) - (Q / A)] sec per dit
(example: W = (60/19)*[(1/5)-(41/1080)]=(60/19)*(0.162037)=0.5117 sec/dit)

(So, in our example, if letters are generated using a dit-time of
0.05556 secs and the spacing between letters is generated using a dit-time
of 0.5117 secs, the result will be text at 5 wpm with letters at 18 wpm.
This was with "CODEX" as the standard. The values you get using "PARIS"
differ: you would get 0.06667 sec and 0.5228 sec. This is slower, as
expected, since PARIS has fewer units than CODEX.)

73s...

2843. Russian Robinson Club

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-12 11:38:32 UTC
From: "Albert I. Sushkov" <rv3gw@lttsco.lipetsk.su>
Message-ID: <AAucQWj8P2@lttsco.lipetsk.su>
Source record: 269795

Hello ALL

The radio amateurs-travellers club named "Russian Robinson Club" interested in world island program - IOTA is applied to separate radioamateurs, associations, funds and also clubs, interests of which are equally connected to the above mentioned club.
The club "RRC" (Russian Robinson Club) created at the beginning of 1993 rendered support in organization more than ten island arctic DX' pedition in 1993, two of which are NEW IOTA:
4K2RRC (EU 019), 4K3RRC (EU 082), 4K4RRC (AS 005), 4K5RRC (AS 025), 4K3GW (EU 161), 4K3WQ (EU 162), 4K3/RW3GW (EU 082), 4K3/RA1ZA, 4K3/RA1WQ, UW1ZZ/A (EU 082), UW1ZZ/A (EU 161), 4K4DV (AS 029).
During this year Russian island national diploma program (RRA) has been developed like national island program of Italy (IIA), Spain (IDEA), France (DIFM), Portugal (DIP), Polska (SP IOTA A).
Competitors of this program have receive already more than 150 diplomas. We greatly hope that interest to Russian national island "RRA" will be increased every year. Besides it a list with separate numbering of Russian islands according to "RRA" has been developed already.
Club "RRC" publishes magazin - report every quarter which informers about members of this club; last island, polar and sea expedition (.../mm); IOTA - News; database of Russian island stations, antarctic station (4K1); diplomas and other news.
Every Sunday at 08:00 utc 14.120 +/- QRM this club organizes different discussions.
The club "RRC" includes a great number of polar explorers, islanders, navigators which had a lot of expedition to islands, Antarctica (4K1) and (.../mm). Besides it there is a lot of radioamateurs interested in IOTA and "RRA".
At present this club experiences a great financial problems for arranging expeditions to Russian islands and other places.
There are wonderful opportunities to visit many islands among which rare available and desert, which are of great interes-ting opportunities and suggestions.

This club has many problems with industrial radio equipment which is sometimes necessary in expeditions. Now many of radioamateurs work with home-made apparatus which often break at unsuitable moment. Sometimes there are rare possibilities

to visit islands of Arctic and Antarctic basin. The club has
a wonderful developed diploma program but financial means are
greatly need for its realization.
Council of "RRC" applies to sponsor, radioamateurs, organiza-
tions, associations, funds and clubs to render any financial
support in carrying out islands expeditions.
We shall also be thankful to all who give us any used (second-
hand) industrial radio equipment for its further using in dif-
ferent expedition.
In all cases any sponsor will receive a description of events,
photos, slides or videofilm from the participants of DX' pedi-
tions.
The sponsors indicate in their agreement what they want to
have in return for their financial support or equipment. All
those who will render any support in any cases they'll be
free of charge subscribers of our magazine-report "Russian
Robinson News". "RRC" invites all interested HAMs from diffe-
rent countries of the world to arrange joint expedition to the
islands of Russia.

"RRC" can help to arrange any visit to any island of Russia and
to settle all organization problems. Wait for your suggestions !

2844. Re: Grounding and lightning protection

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-12 12:02:23 UTC
From: wvanhorn@magnus.acs.ohio-state.edu
Message-ID: <2lsb0f$9dg@charm.magnus.acs.ohio-state.edu>
Source record: 269796
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

This whole discussion of lightning protection has been very good, but nobody yet has pointed out that the best "protection" is prevention. The real function of lightning rods is to PREVENT lightning from occurring; only if they fail is it necessary to carry off the multi-kilovolt, multi-kiloamp strike current and SOME damage is inevitable.

An antenna tower can be a very effective lightning rod, if properly made. I won't go into the basic physics involved, which is only poorly understood anyway; but before a strike can occur, a very high level of charge must develop overhead. That charge can usually be drained off by a lightning rod before it gets high enough to break down the air column from cloud-to-ground. The key is to make the top extremity a sharp point, or points.

To do this with an antenna tower is tricky. A path should be made from the pointed top member to ground that bypasses the antenna circuit, because in the process of draining off charge, a lot of noise will be developed and it would be very annoying, to say the least, to have it directly piped into the receiver. Even with it bypassing the input stage of the receiver, the noise will be heard but that can be a very effective warning that it is time to get off the air and disconnect the receiver input!

: > Well, I want *my* call to be "K".

: Golly, Ed, you must be one of those long-winded types. Would you settle for
: something a little shorter -- like maybe "N"? ;-)

: Todd, KB6JXT

I considered upgrading to extra just so I could get the shorter call "N".
But then I realized that I would be left out of all the nets. Our local
ares-races nets call the roll by suffix. With my new found privelidges on
twenty meters I would not be called when the sixes are listed for that
rare island dx. Oh Well. You know with a call of "N" I would be
listening up every time I heard that letter....It is like can you name
that tune in one note? I like some rythem. Think I will keep my no-clue
call n6fri. I can hear that call in a 2 meter contest pileup anytime.
With n6amg and n6ig and myself operating, we still hold the record scores
of all three ARRL VHF contests in the Pacific Division.

AA8FQ runs for charity

Fred Doob, AA8FQ, raised more than 2000 dollar(s) for the Childrens Cancer Research Fund while running the Los Angeles Marathon.

Fred made more than 400 contacts on 144 and 440 MHz using a hand held transceiver; a commercial manufacturer donated 5 dollar(s) to the CCRF for each contact Fred made.

Fred, 47, topped his run last November in the New York City Marathon by 100 contacts and his time was better, too, by 15 minutes. ''I average about 3.5 hours in a marathon without radio, and about 5 hours when I operate. Listening to the radio takes your mind away from the mental concentration necessary to run 26 miles.''

Fred's operation was coordinated by the Baldwin Hills Amateur Radio Club, organized by President Ed Walker, WA6MDJ. Fred's principal net control, Keith Glispie, WA6TFD, ''did a great job. But more people should use phonetics; it's hard to hear when you're running.''

KCOB-TV, Channel 11, ran a story about AA8FQ's run for charity the evening of the marathon, with film both of him, at the finish line, and inside the Amateur Radio communications tent. Amateurs provide a medical net as well as a ''start'' and a ''finish'' net. Greg Powell, KD6AIS, helped to arrange the television coverage.

Fred Doob will be at the Dayton Hamvention; look for him at the Solder-It booth.

Amateur Radio to the rescue

Two men rescued from a sinking boat in the Gulf of Mexico credit Amateur Radio for saving their lives.

Larry Hooker, KB5ZNY, of Thaxton, Mississippi, and his sailing partner, Rett White, were returning from Honduras on Hooker's 35-ft sailing vessel ''Off The Hook,'' when they ran into an unexpected storm and high seas.

Hooker had been in contact with his friend Randall O'Brian, KD5ZH, of West Point, Mississippi, since hoisting anchor on February 6, on 80, 40, and 20 Meters. Hooker had visited his daughter, Tina Hooker, KB5YNN, a missionary with Global Outreach in the northeastern part of Honduras, in an area accessible only by air or sea.

O'Brian was the first to learn of their difficulties and eventually contacted the US Coast Guard. O'Brian continued to help provide communication, along with the Coast Guard, who came up on 3862.

On March 4, Hooker and White were taken aboard the Coast Guard cutter Cushing and their boat was put under tow but subsequently sank.

''The Lord decided that he would use Amateur Radio to save us,'' Hooker said.

From Tad Cook, KT7H
Seattle, WA March 11, 1994
To all radio amateurs

SB PROP ARL ARLP010
ARLP010 Propagation de KT7H

Coronal holes played havoc with the Earth's magnetosphere again last
week, sending the A and K indices soaring. Conditions were actually
stable from the 4th through the 6th, but were otherwise very
unstable, with frequent reports of K indices around 5 and 6. When
this happens, absorption of HF signals becomes a problem, especially
over polar paths.

Solar flux dropped slowly after peaking just above 100 at the start
of the period. Look for the flux to continue dropping, reaching a
low near 85 around the middle of this month. It will then rise and
peak again near 105 before month's end.

Active geomagnetic conditions may remain over the next few days,
occurring again around the end of the month.

Sunspot Numbers from March 3 through 9 were 122, 80, 86, 101, 80, 80
and 68, with a mean of 88.1. 10.7 cm flux was 100.9, 97.9, 95.7,
95.5, 91.3, 91.3 and 89.9, with a mean of 94.6.

The path projection this week is from Chicago, Illinois to Guyana,
where 8R1/N4VA is operating.

80 meters should be open from 2330 to 1030z, with the best
conditions from 0200 to 0930. 40 meters looks good from 2230 to
1100, with the best shot from 0030 to 0930. 30 meters may be
open on many days almost around the clock, with best conditions from
2230 to 0630. 20 meters should be good from 1500 to 0130, and
17 meters from 1430 to 2300. Check 15 meters from 1600 to 2000.
10 and 12 meters do not look too promising over this path, but check
12 meters around 1630 to 2130 and 10 meters from 1830 to 1930.

>level of charge must develop overhead. That charge can usually be
>drained off by a lightning rod before it gets high enough to break down
>the air column from cloud-to-ground. The key is to make the top
>extremity a sharp point, or points.

This is a common misconception, and a few companies have made good livings feeding this error. But the FAA put it to rest with their field tests in Florida. They set up a series of towers, some unprotected, some with lightning rods, and some with point dischargers designed, so the companies said, to drain off the space charge harmlessly. The FAA found there was *no difference* in lightning strike frequency among the three groups of towers, but only the towers protected with properly installed lightning rod systems sustained no damage. The ones protected with the point dischargers sustained the *most* damage.

If we dig a bit into the physics of lightning, which *is* becoming well understood thanks in part to these highly instrumented tests, we see why these point dischargers don't work, and why lightning rods *don't* prevent strikes, but do carry the strike currents away harmlessly if properly installed.

The charge responsible for a single lightning strike is typically around 20 coulombs, and may extend vertically in a thunderhead as much as 7 km, and horizontally by 2 to 3 km. It's stirred by winds moving at up to 70 km/hr. It induces a matching, but opposite polarity, "mirror" charge in the ground under the cloud.

A point discharge that exceeds about 20-50 *microamps* will start to generate upward *streamers*. It's these streamers coming up from the ground that, when they meet a stepped leader coming down from the cloud, form the channel through which the lightning bolt is conducted. So for a dissipation array to prevent rather than attract lightning, each point

discharger must be limited to a current of less than 20 microamps. Typical commercial arrays have about 5,000 points arranged in either a brush or an umbrella configuration. That gives a total array dissipation of 100 ma.

Now remembering that 20 Coulombs have to be dissipated, the following formula tells how long that would take.

T = 3600*Q*I

where T is time in hours, Q is charge in Coulombs, I is dissipator current in amperes, and 3600 is the number of seconds in an hour. For the condition outlined above,

T=3600*20*1*10^-4 = 7.2 *hours*.

That's 7.2 hours to dissipate the energy of *one* lightning bolt. A single thunderstorm may have *thousands* of lightning bolts. Note too that the space charge that is created by the minimal current flow of the dissipator *doesn't* stay above the target because of the *winds* associated with storms. It's simply blown away as fast as it's created. The dischargers don't work in preventing strikes. What they, and lightning rods, *can* do is flow more than 20 microamps per point, generate streamers, and *stimulate* lightning bolts to strike them in *preference* to other nearby targets, and then conduct that 4000 ampere current harmlessly to ground *if* properly installed. Unfortunately, the dissipation arrays, because they're made up of a myriad of tiny sharp points, *can't* carry the heavy strike currents away without harm. The FAA found great chunks of the dissipation grids blown off their test towers by strikes.

BTW Ben Franklin was the first to realize how lightning rods work. He realized they were *diverters* of strike current, not lightning *prevention* devices. Many unscrupulous hucksters have *misrepresented* the action of lightning rods over the years, but a few moments contemplation of the physics of high energy discharges shows them to be scamsters.

A friend is into Low Freq communication. He bought a pickup truck with an
aluminum canopy. He can mount as many antennas as he wants on the canopy, but
still remove the whole thing for other uses. If he resells the only thing he
looses is the value of the canopy with all the holes (unless he buys another
truck and uses it on it).

Big problem is size. I use a toyota pickup and thanks to new technology I
don't loose too much space to gear. Not having a fancy centre console I don't
have to worry about what goes on the hump, and I only drive 2 across the front
anyway.

I have been acused of driving a fishboat with all the antennas hanging off it
though...>

I have a couple of Wilson model WH-6016B VHF mobile radios that were
obtained by a law enforcement agency to be used by some of their detectives.

They'd like me to program these radios, so I'm tryingto track
down a service manual for this model, or at least a photocopy of any
relevent pages dealing with programming.

In the distant past, I have programmed similar radios, & know
that you need to pop the cover put the radio into program-mode by using a
jumper, & then using the keyboard to enter in things like channel #,
input/output freq, CTCSS, etc.

Does anyone out there have the manual for this radio, or know
how/where I could track down an inexpensive copy?

Thanks,

Tim

Greater than 2 MeV Electron Fluence for 11 MAR is: 2.3E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low with only a short series of
uncorrelated, small B-class x-ray bursts. Region 7689 (S11W38)
was numbered today.

Solar activity forecast: solar activity is expected to be
very low to low. Regions 7685 (S08W57) and 7688 (N16E60) have

slim chances of producing isolated C-class flares.

The geomagnetic field has been at mostly active levels
for the past 24 hours. Minor to major storm levels were
observed at high latitudes. Energetic electron fluxes
(Gt 2 mev) were at high to very high levels during the period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to active for the next 24 hours then
mostly unsettled for the remainder of the period. High latitudes
should continue to see minor storm levels tapering off to
unsettled to active by the end of the forecast period.

Event probabilities 12 mar-14 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 12 mar-14 mar

A. Middle Latitudes
Active 20/20/20
Minor Storm 20/20/20
Major-Severe Storm 05/05/05

B. High Latitudes
Active 20/20/20
Minor Storm 25/25/25
Major-Severe Storm 05/05/05

HF propagation conditions were below normal over most
regions. MUFs continue to be depressed by up to about 35
percent. Propagation was worst for transauroral circuits.
Similar conditions are expected over the next 24 to 48 hours
before conditions begin improving. The transition from
degraded propagation to near-normal propagation is expected to
be a gradual process covering at least several days.

Cute! True! I, too, have the Corsair I, and I don't know what happened,
I believe the Triton IV noise blanker did more for me. However, I actually
took the Corsair I mobile on Friday to Palm Springs, and I kept trying the
noise blanker on all the noise I encountered. There was one Chevy truck
that gave ignition noise that the blanker reduced, honest! Other than
that, I have never noticed any help from that knob at all.

Good point, Bob. I guess you'd have to operate portable if you wanted a suffix. And if you wanted to keep your call as short as possible, I'd suggest Italy so that you could check into your ARES net as N/I. Of course, if it's a two meter net you'd better take a *BIG* beam with you.

> I would not be called when the sixes are listed for that rare island
> dx.

Since you'll be in Italy for the ARES net, your best bet would probably be to head down to Libya and operate as N/5A for the DX nets and wait for them to call for fives. But then I guess that would make *you* the DX, wouldn't it?

BTW, did we decide on the nomenclature for these calls. Are they 0x0's? ;-)

>Why is there no 10 meter activity?? Is it because of the band openings? If
>so, how do you know when the openings are good?? 10 meters seems to have
>become or is a dead band.

You would have found lots of 10m phone activity into South America
and the Pacific during the March 5 weekend (ARRL DX contest).

My log shows P4, PJ9, YV, ZP, V2, XE, LU, PY, KH6, CE, VP2V, V7,
KL7, T30, HP, HI, KP4, KG4, JA and CX on 10 meters phone last Sunday.

Granted, 15m and 20m were better into the rest of the world that
weekend, but 10m is far from "dead" yet. Maybe next year :-).

I need some info on a GE MASTR II.

I need the tune up procedure for the exciter board PL19B219640G3, and also the pin outs for the tune up jack to match the instructions, that is, PIN 1 not GE METER Setting B or whatever.

Using this for a link radio, had the manual for the receiver but not the exciter.

Any help greatly appriciated... email me at BIEKERT@aol.com
Thanks, Bob KA5GLX Houston Tx

Source record: 269818

DB>A few years ago, at a cross-country ski center, I saw an employee with a
DB>handheld radio attached to his chest with some sort of harness. It held
DB>the radio at a diagonal angle such that the antenna (VHF duck) pointed at
DB>his left shoulder and the base of the radio pointed at the right side of
DB>his waist.

Yah! I used one when I was fighting fire for the Hawaii Volcanoes
National Park and it was a dream. I always had my hands free for
whatever. But when I was pau with that job, I couldn't find the same
kind of harness anywhere for Amateur Radio uses (and I didn't think to
slip one in my pack when I left, hi)...

DB>Does anyone have any information?

...until I looked in the back pages of a QST. Try the EMARS group and
their chest harness ($29.95 + $3.50 S/H). I bought one and it is
very well-made. I use it primarily when biking but also emergency
communications (I haven't made it up to the Sierra this year to test it
for cross country skiing, but your message made me think twice). For an
info sheet, call 210-493-7546. Their address is EMARS, PO Box 781204,
San Antonio TX 78278.

Source record: 269819

> Does anyone know where I can get my hands on "Stabilant 22" contact cleaner?
> A mail-order source would be ideal.

Stabilant 22 is available from:

Soft Solutions
907 River Road, Suite #98
Eugene, OR 97404
Phone: 503-461-1136
Fax: 503-461-2005

Soft Solutions is a Service and Parts supplier for Macintosh computers.
The brochure I have (about a year old) lists it in a prediluted formula
(4:1 dilution with an ispropyl alcohol carrier) at $36 for a 15ml container.
(Phew! Don't spill it!)

Cheers,
Tom Leber

2870. St Patrick's Day Special Event Station

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-13 03:45:19 UTC
From: payned@dmapub.dma.org
Message-ID: <CML3rn.Hzt@dmapub.dma.org>
Source record: 269821
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

There is a change in the operation of special event station WB8SMC/8
from St. Patrick, Ohio as announced in the major ham magazines. The original
dates of operation were to be March 12 - 13 1994, but as explained by a member
of St Patrick Church (where we will be operating from), "We have basketball
tournaments up this way that take precedence over weddings, having babies and
other such trivial events - and had to move the celebration back to the 26th."

Well, March madness notwithstanding, the FAROUT ARC will operate WB8SMC/8
from St Patrick OH (Shelby County) during the period 1800 UTC 26 March 94 to
1800 UTC 27 March 94 to belatedly celebrate St Patrick's Day. Frequencies of
operation will be in:

80 - 40 - 15 - 10m Novice CW and 20m General CW
80 - 40 - 20 - 15m General phone and 10m Novice phone

WB8SMC QSL's hams and SWL's 100%. Send QSL and business size SASE to:

WB8SMC/8
FAROUT ARC

: Golly, Ed, you must be one of those long-winded types. Would you settle for
: something a little shorter -- like maybe "N"? ;-)

Don't be a DOPE, Todd. The letter "N" is, "dah dit." It ends in a DIT
so it's not as good as a call that ends in a DAH.

BTW, when I wrote the book on calls, I suggested that "K", "N", and "W"
could easily command $10,000 or more in the open market.

2875. Licensing in Japan

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-13 06:29:35 UTC
From: slay@netcom.com
Message-ID: <slayCMLBDC.7Dp@netcom.com>
Source record: 269826

So, we think we got it bad in the USA on getting our ham licenses? Take a look at the following article that I received recently from Japan.

The following article first appeared in the vernacular Asahi Shimbun newspaper in Japan. It was translated and reprinted in the TIARA NEWS - the Tokyo International Amateur Radio Association's newsletter in their February 1994 issue. Permission to reprint was/is clearly stated in the masthead, provided credit is given to both the individual author(s) and to TIARA NEWS.

ASSOCIATIONS: The Barrier To Simplifying Japanese Amateur Radio Licensing

"There are too many procedures and it is too expensive to get a Ham license. Why can't the Japanese system be like that in the U.S. where you obtain your license once and then you can operate freely within certain
limits?" That is the plea of Japanese Hams.

THREE STEPS TO GET ON THE AIR
To get on the air you have to go through three steps:

(1) First you take the national examination or a special training course to obtain your radio operator license (musen jujisha menkyosho).

(2) You then must file an application for "opening the station" [i.e. to establish the station] with the Japanese Ministry of Posts and Telecommunications (MPT).

(3) Then you must obtain confirmation that your transmitter and receiver satisfy certain technical standards.

These procedures take about four months to complete. Moreover, whenever you buy a new rig you must make an application for such change, and your station must be re-inspected. Furthermore, your license must be renewed after five years.

In the case of the DENWA-KYU license (fourth class, phone only) which most Japanese Hams hold, the national exam costs 2,700 yen (approx. $26) and the special training course costs 23,050 yen (approx. $220). The application for opening a station costs 7,300 yen (approx. $70). An application for change of radio equipment and renewal of the license costs from 1,000 to 4,000 yen (approx. $9.50 to $38).

The Land Mobile Communications Division (Yuseisho Ido Tshukinka) of the MPT responds to the above criticism by saying: "All of

the procedures are necessary to enable so many people to make
good use of the available frequencies which are limited resources.
We have partially simplified the procedures."

IN THE USA, PERMITS ARE LUMPED TOGETHER
There are 2,450,000 licensed Hams in Japan. One Ham who is an officer
of an Amateur Radio organization stated, "I have been pleading with
the government for 30 years to change to a system like one in the USA
but I have not gotten anywhere, even though I have yet to find any
fault with the US system."

When you look into each of these procedures you will find that each
procedure has a connection with an organization in which former
MPT bureaucrats are working after their retirement (from government
service). First, the application forms are sold at the JARL -
Japan Amateur Radio League (Shadan Hojin Nihon Amateur Musen Renmei)
at prices ranging from 500 to 800 yen (approx. $4.75 - 7.60).
The special training course and the station modification inspection
are done by the JARD - Japan Amateur Radio Development Association
(Zaidan Hojin Nihon Amateur Musen Shinko Kyokai).
And that is the way it goes.

The JARL however, is an organization of Ham-loving people and therefore,
there are few retired bureaucrats there, but in the aforementioned
organizations out of a total of 29 directors, 12 are retired MPT
bureaucrats.

MOST OF THE REVENUE IS OBTAINED FROM BUREAUCRATIC PROCEDURES.
The total JARD income in 1992 was 560 million yen (approx. $5.3M)
and of that, 547 million yen (approx. $5.2M) came from the (kind)
of bureaucratic procedures described above. That seems to be
the reason that they will not change to the US system.

The above is a translation of an article that appeared in the
morning edition of the Asahi Shimbun newspaper on October 9, 1993.
The translator's comments follow:

1) After passing the national examination or successfully completing
the special training course, the prospective Ham will have to file an
application for a radio operator license together with an additional
1,050 yen ($10) worth of revenue/tax stamps. Every application for
a station license, modification or renewal requires the completion
of complicated forms. These forms can generally only be obtained at
Ham specialty-stores, certain large bookstores, or at JARL branch
offices.

2) By paying 1,000 to 3,000 yen to the JARD for a station "guarantee",
amateur stations up to 100 watts are exempted from undergoing the
station inspection which requires a complicated application procedure,
long waiting time, and expensive inspection fee.

3) The license term for non-permanent residents of Japan is one year. Applications for station license renewal and modification must be filed separately.

4) Formerly referred to as "Denwa-kyu", the 4th class (No Code) licensees comprise more than 90% of all Japanese amateur radio operator license holders.

5) This the amount of revenue/tax stamps required together with license application forms. 14,600 yen ($140) for stations over 50 watts An additional "guarantee fee (nominally 3,000 yen or approx. $28.50) is paid to the JARD. Or, in the case of a 500 watt station, the station inspection fee is 21,200 yen (approx. $200) plus another 5,300 yen (approx. $50) "guarantee" fee to the JARD. In addition, an annual "radio spectrum users fee" of 500 yen (approx. $4.75) or 1,000 yen ($9.50) if you have both the 100 watt fixed and 50 watt portable station licenses, is levied by the MPT.

6) In the USA, the station license is automatically issued together with the operator license without the necessity to already own any radio equipment. Mailing address changes, etc. can be done easily and the term of validity automatically resets for another 10 years from the date of the change. And what is more, you only have to pay about $6 for the examination, and the rest of the procedure is all free of charge. You do not even have to attach an SASE to your application forms.

7) Station inspections in Japan are done by the local bureaus of telecommunications (Denkan).

The above article was translated by Roy Waite 7J1AAK/W9PQN and edited by Motoi Kawatsu JK2PNY/AB6GT.

Sorry this was so long, but thought others might be interested.

Source record: 269729

Would anyone mind assisting me by downloading my catalog from the BBS and let me know if it is possible to post it in specified groups of people who could possibly become part of our manufacturing team of exotic surveillance gear for law enforcement agencies. We are in the process of developing a global distribution network for sensitive intelligence equipment with over 150 unique designs--in full detail... The BBS number is 601-876-9905 and you can download doc: CATALOG.ZIP or CATALOG.EXE (self extracting) and for the ASCII version get CATALOG.TXT... Send replies to NO1SLEUTH@delphi.com Thank you.

2878. noise blankers

Ya know, it absolutly amazes me the lack of quality that hams will put up with in a radio as long as it a.) looks spiffy and b.) they know someone else that made the same mistake (er ah... choice. Yeah, that's it)

Kenwood for years has been pulling the game of adding noise to the front end and cutting off the lowend audio response so the radio "sounds hot". And a little under dampening in the CW filter makes a pleasant ringing tone that just "jumps out of the QRM". Ya gotta love it! (It only takes a handful of parts to make a receiver that's just on the verge of self-oscillation. You really don't need to spend $2K plus.)

But the DX Hogs (oops, I mean emergency preparedness types) around here with the Ultra-2K amps and 80 foot towers swear by them for snagging that rare one. (er I mean passing health and welfare traffic).

To: info-hams@ucsd.edu

FOR SALE!!!

I have a brand new MFJ 948 antenna tuner. It is a Cross-Needle meter with
built-in lamp. Sells from MFJ for $129.95 (when they have them) + shipping
and handling. I just got it, but I just purchased a matching auto-tuner for
my Kenwood. I will sell this MFJ 948 for $119.00 + shipping.

The other item I have is a 6-month old Astron RS-20A (16 amp continuous, ICS -
20 amp). Cost new $90.00. Will sell for $75.00 + shipping. Again, the
reason for selling this gear is that I aquirred a matching Kenwood power
supply.

If interested, call (208) 526-7033 weekdays, (208) 524-1388 eves, or leave a
message on email at the addresses below.

Hate to rain on your parade, but that call won't work. The US only has the
first half of the 'A's, thus you can't have an A#XXX call. (Or A#XX, A#X)

I think a lot of people are NOT reading this message carefully. This message
is simply an advertisement for the World online service. Rates are for logging
in as an interactive user (eg. dialup, telnet) and using the machine that
way.

Anonymous FTP is by its nature a FREE service.

the reason the service was moved from world.std.com to ftp.std.com is because
the usage level was having performance implications for PAYING customers.

If the operators of ftp.std.com see fit to limit the number of simultaneous
accesses, well that's their right. You'll find such no nearly every ftp site.

(I am a customer of world.std.com, not otherwise associated).

And no emissions controls. :-(Diesel smoke is a suspension of carbon particles
impregnated with the byproducts of combustion, which is small enough to
enter your lungs and lodge in the lung walls. Once lodged all those combustion
byproducts leach out into your body. Diesel vehicles need dust traps at the
very least.

: >mount it on the roof of my two story house. My problem is that the tower

: >will be one of the highest structures around, and is almost certain to be
: >struck by lightning sooner or later (at least I want to be prepared).
: >I would like to know the best way to ground the tower.
: >
: >In the ARRL handbook (and also the NEC - National Electrical Code) there
: >is a lot of discussion about protecting the feedline by grounding the shield
: >of the coax, using arrestors, switching them to ground when not in use etc.
: >There is also some discussion of grounding a REAL tower. But I haven't been
: >able to find much on roof towers. What I want to be sure (or at least as
: >sure as possible) of is that if the antenna/tower gets hit, the lightning
: >strike doesn`t arc through the house, etc.
: >
: >Some specific questions I have are:
: >
: >1. What size of ground lead(s) to use for the tower? I realize that
: >bigger is better but the cost of enormous cable is prohibitive. What
: >is reasonable if you EXPECT or PLAN on a direct hit?

: The NEC says number 8 solid is the minimum size for the downlead of
: a lightning rod. Consider this the smallest wire you can use. Since
: lightning is a pulse that has RF components through VHF, skin effect
: matters. A better downlead is 5 inch wide copper flashing run as straight
: as possible to ground, but in no case having a 90 degree or sharper
: bend in the path.

: >2. How many?

: If you use the correct size, and do the bonding correctly, one is
: sufficient. If you aren't going to be able to inspect the run
: frequently, you might consider paralleling a number 8 solid wire
: with the 5 inch strap so that if corrosion opens one connection,
: you will still have a better path to ground than through your
: roof.

Also concider using old RG-8 & RG-11 with centers & sheilds tied
together as grounding cables. Lots of this coax throwed away needlessly.

(John)

k
: >3. What paths do I run them? The obvious answer would be the shortest,

j
: except that the shortest path is on the opposite side of the house from
: the shack and the feedlines. Would the resulting 'cage' effect be good
: or bad?

: Normally, you want the shortest and *straightest* path to ground. However,
: ground loops can be disasterous. Make up your mind to establish a single
: ground point somewhere on your property and connect all ground runs to
: this one point. Make sure the utility grounds are also bonded to this
: point. Don't ever depend on earth conductivity to close a ground circuit
: and don't ever use a feedline shield as a ground conductor.

: It's ok to have multiple grounds, but they must tie to the single
: point ground via low inductance, high conductivity cabling in a
: *star* configuration, not in a daisy chain. Daisy chaining grounds
: is a recipe for disaster.

: Setting up a ground cage is an extreme measure of protection. To do
: it right is not simple. Doing it wrong can be dangerous. If you can't
: analyse all the current paths properly for ground loop effects, don't
: do it.

: Bring *all* cables into your shack via a "ground window", that includes
: power and telephone. A ground window is a single small area, usually a
: rack panel, copper plate, or the like, that each wire is attached to via
: an arrestor of the proper type for that kind of cable. The ground window
: is then connected to the master single point ground by a heavy strap or
: cable. This assures you that all cabling entering the shack will be at
: near the same potential during a strike (plus or minus the breakover
: voltage of the arrestors). With quality arrestors, you shouldn't ever
: have a voltage differential of more than 200-400 volts across your
: equipment. Most equipment will tolerate this kind of voltage for the
: few milliseconds required. Note that your entire shack may be elevated
: to several thousand volts above ground due to the resistive drop of
: your single ground lead, but as long as *every* part of the shack is
: elevated the same amount, no net current can flow.

: >3. Do I need to stand them off from the roof?

: It's generally not necessary, but it won't hurt. Remember that a direct
: lightning stroke will typically flow 4,000 amperes or more for several
: milliseconds. The wire can get quite hot. I've seen number 12 solid
: *vaporized* by a lightning stroke. That's why you want to use at least
: number 8 wire or heavy strap.

: >4. Do I need to attach to each leg of the tower?

: That depends on the tower construction. If the tower is welded, connecting
: to one leg is sufficient. If it is bolted or riveted, inspect it carefully
: for loose connections and use bond straps to make it a single conductor.

: >5. What about the guy wires?

: Generally, *don't* ground the guy wires. If the tower is going to carry
: an HF antenna, you'll likely want to break guys with insulators anyway
: to avoid pattern disturbances.

: >6. Anything else I should know?

: A single ground rod is not an effective ground in most soils. Use
: at least three no closer than 4 feet apart in a triangular arrangement.
: Bond them all together with your heavy strap. If you have *metal*
: underground water piping, tie to that too. Remember, *star* configuration.
: No ground should connect to another except at the *single* point
: connection. And no downlead should connect anywhere but at the single
: point.

: Always *mechanically* bond ground wires and straps. Don't depend on
: *any* soldered connection. Solder *will* melt when lightning strikes.
: The NEC says there should be *no* splices in a ground run. That's perhaps
: a bit extreme. A *good* mechanical and electrical splice should be ok,
: but rather safe than have the insurance company void your claim.

: >I know that there's no guarantee when it comes to lightning strikes,
: >but it is my family in the house and I want to be sure I have done
: >everything I can to protect them.

: That's a good attitude Dave. Lightning kills more people each year
: than any other weather related thing. Besides, the better ground
: field can help your HF signals *every* day.

In article <CMEG3M.GJ9@murdoch.acc.Virginia.EDU> clh6w@faraday.clas.Virginia.EDU (Carole
L. Hamilton) writes:
>You've make quite a leap in going from PARIS to 50 units! What
>asumptions did you make about dash per dot ratio? And how many
>dots per space?

FYI--the accepted "correct" ratios are 3 to 1. Thus a dah is three times the
length of a dit. This same ratio holds in the length of the "spaces" between
dits and dahs and longer spaces between characters and then words. Adding
this all up, using a dit as the basic length, you should get the word paris
lasting 50 dits-lengths.

This is why peole who have some background in music generally have a cleaner fist--it's in the tripletts.

My understanding was that they are not allocated. The only reason we can have N#XXX, W#XXX, or K#XXX is because the US has KAA-KAZ, NAA-NZZ, and WAA-WZZ, whereas whe only have AAA-ALZ. (If they are allocated, it is as a prefix, and thus a person may have A66XX in whatever place it is that has them, but there is *no* A6XX.)

I worked in a ham radio shop back then and the FT-101 was the PREMIER radio for the 10 1/2 Meter crew. It was sold as receive only but was modified by clipping a little brown wire on the bandswitch.

I actually had an FT-101E a year or so ago. Sold it to a new novice,
probably could have got more for it if I sold it to a CBer.

Remember that Amperes are the same as Coulombs per second. So the correct formula is

I = Q/T and we get T = Q/I = 20/0.1 = 200 seconds, if we use the suggested current value of 100 mA.

OK, this is still a fair bit of time to get rid of the dangerous 20 Coulombs of charge. If the lightning is really crashing all around you, this flow rate is not sufficient to avoid a strike.

2881. Suggestions for Resistive Spark Plug Cables

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-13 12:25:26 UTC
From: andy@clark.net
Message-ID: <2lv0nm$c7t@clarknet.clark.net>
Source record: 269733

Recently, I had a major tuneup on my Plymouth Acclaim. The service included replacing the spark plug cables. The tuneup people used cheap, non resisistive cables. The result is that on 220 MHz FM, I now have some QRN which I never had before. If I went to the dealer for exact replacement cables, the set would cost around $85. In the auto discount stores, the cables are pretty cheap looking, and probably non resistive. So I'm looking for suggestions for nationally-available resistive type cable sets that are reasonably priced, which you have had success with in minimizing ignition noise. Thanks!

Please e-mail your responses to andy@clark.net.

RH-->I was going to get the ramsey 2 or 6 meter fx models transceiver that you
-->build yourself simply because I think I will find radio more interesting i
-->do it
-->myself instead of getting premade.

I wish Heathkit was still active in the HAM radio market place for kits.

RH-->Now,I have heard these are no good?
-->Is this true,will someone leave me their experiences in maiL?

I have never build any Ramsey kit, but a few hams in the local club
bought the 220MHZ kits and build them as a group project.
have not heard anything good about the radio. Some of
the units have never worked, some dont work long before
needing repair (few days) and then they do not have a
good sound to them. I understand that the 2M kit is OK.
This group of hams are made up of engineers and some with no technical
background so the quality of building should be ok. I will not buy the
220Mhz kit that I wanted to because of this experience.
Remember, I have no direct experience with this case, just talking to
and listening on the local repeater to the topic.

Good Luck

>on these choices.

People often say to buy a diesel because it won't generate any RFI. I wish they could have owned my diesel Nissan pickup. It had the most horrendous RFI I've ever experienced in a vehicle. There was a severe popping noise, similar to really severe ignition noise, any time the engine was running. I could disconnect the alternator belt and the battery (after starting the engine), and the noise was still there with no vehicle electrical equipment operating at all. It got into everything from the entertainment radio to HF, VHF, and UHF ham gear.

I tried every trick I know, (and I thought I knew them all), without any success. The dealer couldn't fix it. The zone office couldn't fix it. I even talked to factory engineers in Japan. Everyone was stumped. I finally sold the vehicle back to them and bought a Jeep pickup. Aside from some alternator whine, which I fixed with a choke, it's generated no RFI from it's 6 cylinder gasoline engine.

> What does the shape factor spec of a filter indicate? I assume something
> about passband/stopband transition or some such?

Yes, it's the ratio of the 60 db to 6 db attenuation bandwidths. A perfect filter would have a shape factor of 1:1, IE the 6 and 60 db bandwidths are identical. But real filters are never that good. A shape factor of 2:1 is considered excellent. Note that this doesn't tell you everything you want to know about the filter. You also want to know the passband ripple and differential phase response, and, of course, you're interested in the insertion loss and terminating impedances of the filter if you're going to design it into a piece of equipment.

Ignition noise is often NOT the problem. It is very possible that the
engine used fuel injection (solenoids, square wave pulses), an electronic
fuel pump (my Pathfinder has a noise problem from the fuel pump), and
a computer system. So getting a diesel is not likely to be a big help. Now
in the old days of mechanical fuel pumps, carbs, etc. it might have been
fine...

SB SAT @ AMSAT $ANS-071.01
W3IWI EXPLAINS SAT PROPAGATION

HR AMSAT NEWS SERVICE BULLETIN 071.01 FROM AMSAT HQ
SILVER SPRING, MD MARCH 12, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-071.01

W3IWI Explains A Propagation Phenomenon Observed By IT9XXS

Giovanni Mazzola (IT9XXS) posed a question about a propagation phenomenon he has been noticing on KO-23, KO-25, UO-22 and other digital satellites. He reported that he has regularly observed that at the end of the pass, when the satellite is between 0 and -2 degrees elevation, the signal exhibits three strong peaks. During the pass it may be S4 but when the three peaks in signal strength occur, they are over S9. After that he loses the signal altogether. He notes that he has a good horizon, looking out to the sea to the north.

Ton Clark (W3IWI) offers the following explanation: What IT9XXS is observing is classic and very predictable. It is the result of two physical effects: atmospheric refraction and "Lloyd's Mirror" reflections.

The earth's atmosphere bends the signals so that your "radio" horizon is below the physical horizon. The refractive index of the air is about 300 parts per million different from unity depending on the temperature and water vapor content of the air. This is precisely the reason that most line-of-sight computations of terrestrial paths increase the effective radius of the earth by about 1.33. Under some tropospheric conditions like when the temperature increases with height and/or when anomalous water vapor content is present, ducting can occur and VHF/UHF paths may extend to thousands of kilometers. This is especially true of over-water paths like the frequent duct that occurs between southern California and Hawaii or between Italy and Spain. Since the path in question is over water, this is probably the reason signals are received from the satellite when it is below the apparent horizon.

The second effect that is occurring is a reflection of the signals from the water, so the antenna is receiving two different signals. In optics this is often called the "Lloyd's mirror" effect. When the signal is reflected, its phase is changed by 180 degrees, so the direct and reflected signals arrive at the antenna out of phase and cancel at the horizon. At other elevations, the two signals traverse different paths so the phase difference of the direct and reflected signals varies, and the signals may either add constructively (increasing the signal strength) or destructively (causing a null). If the angles at which maxima

and minima signal were known, it would be possible to compute the height of receiving antenna above the level of the sea (reflector).

This reflection effect was first seen in about 1947 when some Australians observed the radio "star" Cygnus-A from an antenna atop a sea cliff. The fact that they observed deep nulls allowed them to demonstrate that Cygnus-A was a compact object, smaller than a few arc-minutes in diameter and not a large-scale feature of the previously discovered radiation from our Milky Way galaxy. This work was done at VHF frequencies not far from our 2M amateur band.

[The AMSAT News Service (ANS) would like to thank Tom Clark (W3IWI) for this explanation and IT9XXS for posing the question.]

SB SAT @ AMSAT $ANS-071.02
STS-59 SAREX INFO

HR AMSAT NEWS SERVICE BULLETIN 071.02 FROM AMSAT HQ
SILVER SPRING, MD MARCH 12, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-071.02

N5QWL Provides A "Fact" Sheet For The Upcoming STS-59 SAREX Mission

Shuttle Amateur Radio Experiment (SAREX) Fact Sheet

STS-59 Space Shuttle Endeavour

When: Planned Launch April 7, 1994 at 12:07 UTC for 9 days of 2M operations.

Where: Earth Orbit. Altitude 220 kilometers, with radio coverage of latitudes from 70 degrees North to 70 degrees South. We are in one of the lowest altitude orbits ever flown by the shuttle, so pass times will be shorter than usual.

Operators: Dr. Jay Apt (N5QWL) and Dr. Linda Godwin N5RAX. N5QWL is the commander of the Blue Shift aboard Endeavour and will operate the shuttle systems during the "night" shift, while N5RAX is the Payload Commander, responsible for overall operation of three large radars in the shuttle's cargo bay during the "day" shift.

Modes: FM Voice
VOICE CALL SIGNS: N5QWL and N5RAX
Packet (Beacons giving daily mission activities daily if we get a chance, and robot QSOs -- successful connects will be issued a contact number by the robot) PACKET CALL SIGN: W5RRR-1

Frequencies: We will operate split.
PLEASE DO NOT TRANSMIT ON THE DOWNLINK FREQUENCY!

VOICE: Downlink (shuttle transmits) on 145.55 MHz
Uplink (ground transmits) on 144.91, 144.93, 144.95,
144.97, and 144.99 (except over Europe) - we'll listen
on those 5 frequencies to spread out the pileup a bit.
Uplink for Europe only: 144.80, 144.75, 144.70

Successful QSOs on voice will be facilitated by using
standard international phonetics for your call sign.
We will not answer any stations using non-standard
phonetics. Use your entire call sign -- we log with an
audio tape recorder. Do not use our call sign --
passes are very short, and we want to work as many
folks as possible.

PACKET: Downlink (shuttle transmits) on 145.55
Uplink (ground transmits) on 144.49 (worldwide)

If you can, decrease your radio's deviation to 3 KHz (most are
initially set at 5 KHz) and compensate for the Doppler shift. If
you cannot, wait until a minute or 90 seconds after we come over
your horizon to transmit -- that will put you within our IF. If a
station transmits without following these suggestions, we just hear
what sounds like a noisy carrier. The above applies to both voice
and packet.

QSL via: ARRL, ATTN: STS-59 QSLs, 225 Main Street, Newington, CT 06111,
USA. Include a self-addressed stamped envelope (SASE). Non-US
stations include a self addressed envelope with $0.50 of US
postage affixed or appropriate IRCs. Include the Callsign worked,
Date, UTC, Mode, and Frequency. For packet contacts, include the
QSO number issued by the robot. SWL QSL's: Include the Callsign
heard, Date, UTC, Mode, and Frequency.

Information during the mission: AMSAT bulletins, Compuserve, Genie,
Prodigy, local packet bulletin boards,
ARRL bulletins, and HF voice from NASA
Johnson Space Center ARC, Houston, Texas,
W5RRR, or NASA Goddard Spaceflight Center
ARC, Greenbelt, Maryland, WA3NAN,
frequencies listed below.

W5RRR may be found on or near: 7.215, 14.280, 21.360, and 28.400 MHz.

WA3NAN retransmits NASA Select Audio and SAREX bulletins simultaneously on
or near 3.860, 7.185, 14.295, 21.395, and 28.650 MHz.

The NASA Info BBS at Johnson Space Center, Houston, will also carry
Keplerian elements and SAREX bulletins. (713) 483-2500, 1200 baud,
8-N-1. At the "ENTER NUMBER:" prompt, type 62511 <return> and log onto the
BBS. The Keps and bulletins will be in the welcome message. Disconnect
rapidly to facilitate access by others.

Operations Notes: If you have a packet QSO number issued to you by the
robot, don't try to get another one! Our on-board

program drops the duplicates anyhow, and all you
are doing is making it harder for the other folks. We'll
issue you a QSL card if you appear in the "heard" list on
the TNC and we have issued you a QSO number...that's a
2-way contact, AND REMEMBER, THIS IS ONLY A HOBBY!

N5QWL will be asleep over most USA passes, and N5RAX will be busy with
assigned duties for most daylit US passes, so try us on packet over the
USA if the sun is up. Remember, our packet call sign is W5RRR-1. We'll
try to work voice (1) when we are not otherwise engaged, and (2) at night
or when the ground is cloudy (we are generally busy taking pictures of the
Earth during clear daylight passes).

If I can get to it, I'll activate the SAREX about 3 hours into the mission;
deactivation will occur at about 8 days, 17 hours after launch (unless we
get a one-day science mission extension, then it will be deactivated at
about 9 days, 17 hours after launch).

AO-13 OPERATIONS NET SCHEDS

HR AMSAT NEWS SERVICE BULLETIN 071.03 FROM AMSAT HQ
SILVER SPRING, MD MARCH 12, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-071.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

19-Mar-94 1730 B 073 W5IU WA5ZIB
26-Mar-94 2130 B 084 WA5ZIB W5IU

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. If neither of the Net Control Stations show up, any participant is invited to act as the NCS.

AO-13 ZRO Tests For March 1994

The following schedule of Mode "B" tests were chosen for convenient operating times and favorable squint angles. The tests can be heard on 145.840 MHz. Andy McAlister (WA5ZIB) will conduct all the tests. Mode "JL" tests will no longer occur due to the failure of AO-13's 70CM trans-mitter.

Day Date (UTC) Time Areas covered

Saturday Mar. 19, 1994 1930 UTC NA, SA, Europe, Africa
Saturday Mar. 26, 1994 2315 UTC NA, SA

Note that the dates and days are shown in "UTC". Any changes will be announced as soon as possible via the AMSAT HF and AO-13 Operations Nets.

All listener reports with date of test and numbers copied should be sent to Andy MacAllister (WA5ZIB), AMSAT V.P. User Operations, 14714 Knights Way Drive, Houston, TX 77083-5640. A report will be returned verifying the level of accurate reception. An S.A.S.E. is appreciated but not required.

SB SAT @ AMSAT $ANS-071.04
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 071.04 FROM AMSAT HQ
SILVER SPRING, MD MARCH 12, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-071.04

Weekly OSCAR Status Reports: 12-MAR-94

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Jan 31-Apr 04
Mode-B : MA 0 to MA 90 |
Mode-BS : MA 90 to MA 120 |
Mode-S : MA 120 to MA 145 |<- S transponder; B trsp. is OFF

Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0
Mode-B : MA 180 to MA 256 |
Omnis : MA 230 to MA 30 | Move to attitude 240/0, Apr 04
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current schedule for transponder operations:
ANALOG MODE:

23-MAR-94 7:52 -TO- 30-MAR-94 8:15 UTC

DIGITAL MODE: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

RS-10: Still operating normally for ZS6AOP. The usual regular stations are often found working thru the satellite as well as the "odd" new comer. Reports of copying the beacon while well below the horizon, over the South Pole on south-to-north passes with good signal strengths have been coming in. Hopefully, with more stations becoming active there will be some real long distance sub-horizon contacts soon. [ZS6AOP]

RS-12: RS-12 is currently operating in Mode K. The uplink passband is 21.210 - 21.250 MHz with downlink on 29.410 - 29.450 MHz. The transponder is non-inverting USB or CW, i.e., if you are on 21.225, then listen on 29.425 +/- the doppler shift, adjust your transmit frequency as you work the satellite to keep the downlink frequency constant. The beacon frequencies are 29.408 MHz or 29.454 MHz. The Robot operates on 29.454 MHz. The uplink frequency for the the Robot is 21.129 MHz. When the Robot is not operating, this freq-uency pair can also be used for general QSOs.
[KB8FGC @ KC8TW.#swoh.usa.na]

AO-21: This OSCAR sends down beautiful signals, 59+ signals about 90% of the time. Along with DOVE, ZS6AOP can recommend AO-21 to anyone who wants to start capturing and examing telemetry using basic equipment. [ZS6AOP]

AO-16: Operating normally. [WH6I]

LO-19: Operating normally. [WH6I]

IO-26: Operating normally. [WH6I]

KO-23: Operating normally. [WH6I]

KO-25: Operating normally. KO-25 has a number of new earth images this past week. So far WH6I notes that he has not seen any pictures that were particularly interesting to him. [WH6I]

AO-27: There is no particular schedule transponder schedule per se, and the way it works is that amateur radio section of the satellite has only solar cell illumination to power it so as to not strain the drain of on board battery power on the commercial side. Therefore, if your

using ITRACK OR QUICKTRACK watch the sun terminator (sun darkness line) when it crosses into the light, the Analog repeater turns on but not until it is in sunlight. N4OUL's own experience is that he has worked it with a hand held ICOM-2AT on low power 2.5 W into 4 el 2M antenna and was full quieting stateside. Also VE3BDR worked it with a portable low power with a mag mount. Uplink on 2M is FM at 145.850 MHz and downlink on FM at 436.800 MHz. [N4OUL]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

LANDLINE BBS OPEN TO ALL 916-262-1657
RACESBUL.317 RELEASE DATE: March 14, 1994

Subject: MGT - Semantics - 7/7 - Words To Avoid

Amateur Radio operators have a tendency to use terms that are meaningless to others with whom they work (which leads to confusion) and even cases where Amateurs are not used due to that confusion. Accordingly, over the past two years a concerted effort to avoid certain words has paid off in many areas in those organizations cognizant of this aspect of interpersonal communication.

Astute Amateurs do NOT say to the sheriff's deputy at the roadblock "I'm a ham radio operator in the RACES, or the Vista Radio Club." Rather, they reply "I'm with the Vista Country Emergency Management Agency reporting to my duty station."

Here, our State Auxiliary Communications Service participants make a conscious effort to avoid these terms: Amateur, ham, ARES, ARRL, DEC, EC, RACES, SEC, section or emergency coordinator, and volunteer. Instead, they say they work for the Governor's Office of Emergency Services. If needed, they add that they work for the Telecommunications Branch. Rarely is it necessary to indicate in what capacity; but if needed, they are FCC licensed communications specialists, not Amateur Radio operators.

Recognition of how Amateurs deprecate themselves by their own terminology was emphasized by a California Department of Forestry official who pointedly requested that "Never say you are just a volunteer, or an Amateur. Say you are a CDF Fire Information Officer, for that is what you have been trained for, and are in fact."

The words YOU use DO make a difference in how YOU are perceived by other people. A poor choice of words (no matter how highly YOU

think of them) can unknowingly convey a concept or picture that
is totally at odds with what you THINK you conveyed!

2895. Ham Radio Mail/UUCP/FTP Software Archive & Callsign Server @NS.RISC.NET

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-13 17:37:30 UTC
From: phil@multiop.com
Message-ID: <2lvj0q$eej@paperboy.ids.net>
Source record: 269747

```
* RISC.NET Ham Radio Server *

RISC.NET has established a series of services which all radio amateurs can
access. These services currently include access to the Buckmaster CD ROM
public domain files in addition to the Buckmaster callsign database.

Additional information can be obtained by writing to: root@ns.risc.net

This file contains information on:

1. Accessing RISC.NET's callsign database
2. Accessing RISC.NET's public domain shareware database

================================================================================
1. ACCESSING THE BUCKMASTER CD-ROM CALLSIGN DATABASE

The Buckmaster Callsign Database is accessed by logging into a special account
called "hamradio". From this account, you can access the Buckmaster CD-ROM
callsign database (only the US calls at this point, as the international
database is encrypted and Buckmaster will not provide the key so we can
create a UNIX version of their ICALL.EXE program - if anyone knows how to
decrypt this data, please contact us!) or you can TELNET to the Buffalo or
NJIT callsign databases.

Procedure:

Telnet or rlogin to "155.212.2.2" (or, "ns.risc.net")
Login with user-id "hamradio". No password is required.

At this point the system is self-explanatory.

================================================================================
2. ACCESSING THE BUCKMASTER CD-ROM PUBLIC DOMAIN SHAREWARE

The Buckmaster PD Software Library can be accessed in one of the following
manners: UUCP, FTP, or Mail-based archive server. A complete list of all
files available for transfer may be obtained by retrieving file:

!~/ham-radio/mascd.dir

--------------------------------------------------------------------------------

Anonymous UUCP Information:

Telebit Trailblazer Plus Dial-In: 1.401.455.0347
9600 to 300bps v.32/v.42 Dial-In: 1.401.331.3706
ns.risc.net!login: xxcp
Password: xenix
```

To download a file, issue the following uucp request on your machine:

uucp anomaly!~/ham-radio/files/<filename> yoursite!<to-filename>

All files are stored in /usr/spool/uucppublic/ham-radio on RISC.NET's
Archive.

To request the master list of ham-related files, uucp as follows:

uucp anomaly!~/ham-radio/mascd.dir yoursite!yourname

Mail-based Archive Server:

To answer the interim demand of people on the Internet who wish access
to the ham radio files, we have established a mail-based server which can
process requests for files. Note that in order to keep our SMTP connection
from getting bogged down, we only process *5* megabytes worth of software
requests PER DAY. Users with alternative means of obtaining files are
encouraged to do so.

To receive instructions on how to use the mail-based archive server, send
an e-mail message to "snarf@ns.risc.net", with a Subject: of 'snarf'
and the following two lines starting in column 1:

snarf address [your e-mail address]
snarf help

For example:

snarf address wb9aaz@gello.pcb.org
snarf help

These commands will forward a help file to your reply address. This help
file contains all information you require on how to obtain software listings
and uuencoded mailings of archive contents.

To receive a 104k detailed description of all ham files in the archive,
include the following line in the body of your message:

snarf send ham-radio/mascd.dir

Note that if you do not have an address line, or you have other errors in the
body of your text, you will not get a reply from the server.

Zmodem/Ymodem/Xmodem/Kermit/Sealink:

All files can be accessed from RISC.NET's "bbs" login, for those users without
UUCP or FTP access. Validation is required to access the file sections,
though, so on your first call leave a note in FEEDBACK stating that you're
calling to download from the ham-radio archive, and we'll see that you get an
special access account.

FTP Access:

Our IP Address is: 155.212.2.2! Or, for those of you with Nameservers, try "ns.risc.net"! As with our SMTP connection, the number of FTP users we allow on our link is also limited to prevent net-congestion. If you receive an "all ports are currently in use" message, please try again later. Login using anonymous FTP account "ftp", and your e-mail address for a password!

2896. Telemetering Hardware

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-13 18:27:55 UTC
From: ms38@prism.gatech.EDU
Message-ID: <144959@hydra.gatech.EDU>
Source record: 269748

Perhaps some of you can help me with a couple of projects we have in our Biodynamics lab. We have need for transmitting (one way) some analog and digital signals to a nearby PC for recording and later processing, but need a wireless link. On one project, the maximum distance is around 30' (mobile cats walking around) and the other, around 1 mile (instrumenting Olympic cyclists).

Can you recommend vendors that offer kits, modules or systems that enable the wireless transmission of analog and digital signals over small distances? More specifically, we would like to remote 4+ x 2000 hz, analog (12 bit range) signals to a PC. I could ADC and convert to high speed serial locally then transmit a digital serial stream. I am familiar with EE cktry so am not afraid to build peripherial equipment but need help with the basic RF link.

Your help is most appreciated. Since I don't often read newsgroups, I would appreciate any information mailed to me @

ms38@prism.gatech.edu

Thanks in advance. -Mike Sinclair-

2897. Tokyo HiPower HL-90U Amp

> chrism@col.hp.com
>

Ussually the shape would be the Freq at the top of a curve at 6 db down over the frequency at the bottom of the curve at 60 db down. In other words if attenuation is 6 db at 4 mhz and 60 db at 8 mhz then the shape is 2 to 1. It can get more complicated that that but that is the idea.

Thanks to all of you who have pointed out to me that ftp.std.com does in fact
allow anonymous logins. The first time I tried to login via anonymous to
them, I got the message about paying for an account and then FTP promptly
disconnected me - leading me to believe that a paid account was the only
access they allowed.

Someone pointed out via mail that the limit on anonymous logins may have
been exceeded resulting in the ftp disconnection.

Anyway, I tried again - and success! FTP anonymous DOES work! Thanks to
all who straightened me out.

[regarding A2, A3, A4, ... prefixes]

>My understanding was that they are not allocated. The only reason we can have
>N#XXX, W#XXX, or K#XXX is because the US has KAA-KAZ, NAA-NZZ, and WAA-WZZ,
>whereas whe only have AAA-ALZ. (If they are allocated, it is as a prefix, and
>thus a person may have A66XX in whatever place it is that has them, but there
>is *no* A6XX.)

This rule is violated all the time. Examples are V7A and V7X.

The ARRL DXCC list shows

A2 Botswana
A3 Tonga
A4 Oman
A5 Bhutan
A6 United Arab Emirates
A7 Qatar
A9 Bahrain

Geez, perhaps I can move to the UAE and use A6TY :-).

Source record: 269757

OK, since everyone else is dreaming of confusing calls, how about if I get:
W5HSI

Try sending that one in cw, with a paddle, especially at hi speed.

Actually, I think I'll keep mine. I've thought about changing it to a
WB
or
WA
or K
prefix but I rather like KB. Besides...I haven't been around long enough
to earn the W. ;)
I mean really, how can you beat
-.- -... ....-.. ...- ..--.. -... -.-

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

12 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 12 MARCH, 1994

NOTE: Stratospheric warming continues over Siberia, Canada, and the polar
regions, extending towards Greenland today. Temperature gradient
remains reversed between 60N and the pole at 10 HPA and above.

NOTE: The Effective Sunspot Number for 11 MAR 94 was 34.7.
The Full Kp Indices for 11 MAR 94 are: 5- 5o 5o 5+ 4o 4+ 3+ 4+
The 3-Hr Ap Indices for 11 MAR 94 are: 38 46 45 56 30 31 19 34
Greater than 2 MeV Electron Fluence for 12 MAR is: 2.4E+09

SYNOPSIS OF ACTIVITY

Solar activity was low by virtue of a single,
uncorrelated C-class xray burst. Region 7690 (S15W54) was
numbered.

Solar activity forecast: solar activity is expected to be
very low to low. Regions 7688 (N19E47) and 7690 have the best

chance for C-class activity.

The geomagnetic field has been at unsettled to minor
storm levels. High latitude stations saw major storm levels.
Energetic electron fluxes (GT 2 MeV) were at high levels during
the period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to active levels for the next 24 hours
then mostly unsettled for the remainder of the forecast period.
High latitude stations will experience minor storming for the
next 24 hours.

Event probabilities 13 mar-15 mar

Class M 01/01/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 13 mar-15 mar

A. Middle Latitudes
Active 20/25/35
Minor Storm 25/20/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 20/20/35
Minor Storm 30/30/15
Major-Severe Storm 05/05/05

HF propagation conditions were below normal again over
most regions. Conditions are expected to gradually improve
over the next 48 to 72 hours, although a return to near-normal
conditions is not expected for several days thereafter.
Transpolar and transauroral circuits will continue to see the
strongest signal degradation and will be the slowest to
recover.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Thanks for your input on cars etc. so far.

I have narrowed my thinking to a small pickup or sport utility such as
Bronco, Trooper, etc., probably 86 to 91.

I am told that American cars have less solid state devices to go awry
due to RF from HF or VHF rigs, that Ford seems to be a good choice, that
Japanese vehicles may be more susceptible to RF.

Again, besides physical comfort (my back) criteria include lack of problems
from car to rig and vice versa, and other normal concerns.

All input welcomed. Thanks again. Bob

2916. Icom 737 Transmit Mod File

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-14 04:11:18 UTC
From: lmarrin@delphi.com
Message-ID: <xm+tgKW.lmarrin@delphi.com>
Source record: 269768

Following is a copy from Packet, on how to do the transmit mod for the well-reviewed. Icom 737 HF transciever. If someone else tries it, please let us know if it works.

73 from Leigh/KM6JE in Santa Barbara.

1300 B# 1312 ALL IW3BKW WW 940312 ICOM IC-737 GEN.COVERANGE.
From: IW3BKW@OE7XCI.#TIR.AUT.EU
ICOM IC-737

GENERAL COVERANGE IN TRANSMISSION.

1) Remove the top and bottom covers of the transceiver.

2) Remove the final power amplifier module.

3) Locate the LOGIC-UNIT on witch there is a back-up lithium battery for the RAM memory.

4) On the LOGIC-UNIT, near the chip called IC6 (TMP82C265BF-2),between the output pin PC06 and the imput pin PA15, find the diode D3.

5) This diode is not an SMD component.

6) Cut the diode D3.

..Now the ICOM IC-737 will transmit from 1,6 to 30 Mhz !!!.
73's de IW3BKW Riccardo @OE7XCI. ***

*** END OF MSG # 1300 from IW3BKW @ OE7XCI.#TIR.AUT.EU

2917. Repeaters reaching into the Black Rock Desert, Nevada?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-14 04:30:10 UTC
From: don.irving@rahul.net
Message-ID: <CMn0IA.BBw@rahul.net>
Source record: 269769

I'll be going into the Black Rock Desert 15 miles Northwest of Gerlack, Nevada later this spring for a rocket launch. I wonder if there are any repeaters that reach into there on two meters. The Susanville repeaters might if they are high enough. I suspect the Stateline repeaters are too far away. There is one listed in Winnemucca that might work if it is on the mountain peaks West of town. Nothing listed at Gerlach itself.

Any ideas?

Don, N6DRB

You're in CQ zone 5 and ITU zone 8. There is a pair of maps
on 17-57 of the "ARRL Operating Guide". This book has a number
of other nice maps of use to DXers.

Subject: **For Sale** MFJ-948 Antenna Tuner & Astron RS-20A
To: info-hams@ucsd.edu

FOR SALE!!!

I have a brand new MFJ 948 antenna tuner. It is a Cross-Needle meter with
built-in lamp. Sells from MFJ for $129.95 (when they have them) + shipping
and handling. I just got it, but I just purchased a matching auto-tuner for
my Kenwood. I will sell this MFJ 948 for $119.00 + shipping.

The other item I have is a 6-month old Astron RS-20A (16 amp continuous, ICS -
20 amp). Cost new $90.00. Will sell for $75.00 + shipping. Again, the
reason for selling this gear is that I aquirred a matching Kenwood power
supply.

If interested, call (208) 526-7033 weekdays, (208) 524-1388 eves, or leave a
message on email at the addresses below.

Hate to rain on your parade, but that call won't work. The US only has the
first half of the 'A's, thus you can't have an A#XXX call. (Or A#XX, A#X)

I think a lot of people are NOT reading this message carefully. This message
is simply an advertisement for the World online service. Rates are for logging
in as an interactive user (eg. dialup, telnet) and using the machine that
way.

Anonymous FTP is by its nature a FREE service.

the reason the service was moved from world.std.com to ftp.std.com is because
the usage level was having performance implications for PAYING customers.

If the operators of ftp.std.com see fit to limit the number of simultaneous
accesses, well that's their right. You'll find such no nearly every ftp site.

(I am a customer of world.std.com, not otherwise associated).

And no emissions controls. :-(Diesel smoke is a suspension of carbon particles
impregnated with the byproducts of combustion, which is small enough to
enter your lungs and lodge in the lung walls. Once lodged all those combustion
byproducts leach out into your body. Diesel vehicles need dust traps at the
very least.

: >mount it on the roof of my two story house. My problem is that the tower

: >will be one of the highest structures around, and is almost certain to be
: >struck by lightning sooner or later (at least I want to be prepared).
: >I would like to know the best way to ground the tower.
: >
: >In the ARRL handbook (and also the NEC - National Electrical Code) there
: >is a lot of discussion about protecting the feedline by grounding the shield
: >of the coax, using arrestors, switching them to ground when not in use etc.
: >There is also some discussion of grounding a REAL tower. But I haven't been
: >able to find much on roof towers. What I want to be sure (or at least as
: >sure as possible) of is that if the antenna/tower gets hit, the lightning
: >strike doesn`t arc through the house, etc.
: >
: >Some specific questions I have are:
: >
: >1. What size of ground lead(s) to use for the tower? I realize that
: >bigger is better but the cost of enormous cable is prohibitive. What
: >is reasonable if you EXPECT or PLAN on a direct hit?

: The NEC says number 8 solid is the minimum size for the downlead of
: a lightning rod. Consider this the smallest wire you can use. Since
: lightning is a pulse that has RF components through VHF, skin effect
: matters. A better downlead is 5 inch wide copper flashing run as straight
: as possible to ground, but in no case having a 90 degree or sharper
: bend in the path.

: >2. How many?

: If you use the correct size, and do the bonding correctly, one is
: sufficient. If you aren't going to be able to inspect the run
: frequently, you might consider paralleling a number 8 solid wire
: with the 5 inch strap so that if corrosion opens one connection,
: you will still have a better path to ground than through your
: roof.

Also concider using old RG-8 & RG-11 with centers & sheilds tied
together as grounding cables. Lots of this coax throwed away needlessly.

(John)

k
: >3. What paths do I run them? The obvious answer would be the shortest,

j
: except that the shortest path is on the opposite side of the house from
: the shack and the feedlines. Would the resulting 'cage' effect be good
: or bad?

: Normally, you want the shortest and *straightest* path to ground. However,
: ground loops can be disasterous. Make up your mind to establish a single
: ground point somewhere on your property and connect all ground runs to
: this one point. Make sure the utility grounds are also bonded to this
: point. Don't ever depend on earth conductivity to close a ground circuit
: and don't ever use a feedline shield as a ground conductor.

: It's ok to have multiple grounds, but they must tie to the single
: point ground via low inductance, high conductivity cabling in a
: *star* configuration, not in a daisy chain. Daisy chaining grounds
: is a recipe for disaster.

: Setting up a ground cage is an extreme measure of protection. To do
: it right is not simple. Doing it wrong can be dangerous. If you can't
: analyse all the current paths properly for ground loop effects, don't
: do it.

: Bring *all* cables into your shack via a "ground window", that includes
: power and telephone. A ground window is a single small area, usually a
: rack panel, copper plate, or the like, that each wire is attached to via
: an arrestor of the proper type for that kind of cable. The ground window
: is then connected to the master single point ground by a heavy strap or
: cable. This assures you that all cabling entering the shack will be at
: near the same potential during a strike (plus or minus the breakover
: voltage of the arrestors). With quality arrestors, you shouldn't ever
: have a voltage differential of more than 200-400 volts across your
: equipment. Most equipment will tolerate this kind of voltage for the
: few milliseconds required. Note that your entire shack may be elevated
: to several thousand volts above ground due to the resistive drop of
: your single ground lead, but as long as *every* part of the shack is
: elevated the same amount, no net current can flow.

: >3. Do I need to stand them off from the roof?

: It's generally not necessary, but it won't hurt. Remember that a direct
: lightning stroke will typically flow 4,000 amperes or more for several
: milliseconds. The wire can get quite hot. I've seen number 12 solid
: *vaporized* by a lightning stroke. That's why you want to use at least
: number 8 wire or heavy strap.

: >4. Do I need to attach to each leg of the tower?

: That depends on the tower construction. If the tower is welded, connecting
: to one leg is sufficient. If it is bolted or riveted, inspect it carefully
: for loose connections and use bond straps to make it a single conductor.

: >5. What about the guy wires?

: Generally, *don't* ground the guy wires. If the tower is going to carry
: an HF antenna, you'll likely want to break guys with insulators anyway
: to avoid pattern disturbances.

: >6. Anything else I should know?

: A single ground rod is not an effective ground in most soils. Use
: at least three no closer than 4 feet apart in a triangular arrangement.
: Bond them all together with your heavy strap. If you have *metal*
: underground water piping, tie to that too. Remember, *star* configuration.
: No ground should connect to another except at the *single* point
: connection. And no downlead should connect anywhere but at the single
: point.

: Always *mechanically* bond ground wires and straps. Don't depend on
: *any* soldered connection. Solder *will* melt when lightning strikes.
: The NEC says there should be *no* splices in a ground run. That's perhaps
: a bit extreme. A *good* mechanical and electrical splice should be ok,
: but rather safe than have the insurance company void your claim.

: >I know that there's no guarantee when it comes to lightning strikes,
: >but it is my family in the house and I want to be sure I have done
: >everything I can to protect them.

: That's a good attitude Dave. Lightning kills more people each year
: than any other weather related thing. Besides, the better ground
: field can help your HF signals *every* day.

In article <CMEG3M.GJ9@murdoch.acc.Virginia.EDU> clh6w@faraday.clas.Virginia.EDU (Carole L. Hamilton) writes:
>You've make quite a leap in going from PARIS to 50 units! What
>asumptions did you make about dash per dot ratio? And how many
>dots per space?

FYI--the accepted "correct" ratios are 3 to 1. Thus a dah is three times the length of a dit. This same ratio holds in the length of the "spaces" between dits and dahs and longer spaces between characters and then words. Adding this all up, using a dit as the basic length, you should get the word paris lasting 50 dits-lengths.

This is why peole who have some background in music generally have a cleaner fist--it's in the tripletts.

My understanding was that they are not allocated. The only reason we can have N#XXX, W#XXX, or K#XXX is because the US has KAA-KAZ, NAA-NZZ, and WAA-WZZ, whereas whe only have AAA-ALZ. (If they are allocated, it is as a prefix, and thus a person may have A66XX in whatever place it is that has them, but there is *no* A6XX.)

Subject : Re: [News] Auctioning Rules set up by FCC

I worked in a ham radio shop back then and the FT-101 was the PREMIER radio for the 10 1/2 Meter crew. It was sold as receive only but was modified by clipping a little brown wire on the bandswitch.

I actually had an FT-101E a year or so ago. Sold it to a new novice,
probably could have got more for it if I sold it to a CBer.

That is the truth and always has been. You can still pas the test with one
minute of solid copy. If you don't get the 70% correct then they are to
check for a minute of solid copy. Either one will pass the test.

When I got mine the one miute solid copy of 5 was the only way. It was tough.

Subject: TPK
To: info-hams@ucsd.edu

Can someone tell me how easy they find TPK to use? I am helping a local
amateur improve his node (by switching to BPQ) and, whilst his RF knowledge is
good, he doesn't want to spend weeks learning how to drive some software!

Can TPK also operate as a PMS? I'd like to hear from anyone who has done
it, particularly BPQ.

If all else fails, call (303) 499-7111 for the audio portion of WWV. Not
very useful as a frequency reference though :-)

Scott Richard Rosenfeld (ham@wam.umd.edu) wrote:

: As for the request for a call like A4L, this can't be done because the US
: doesn't have the rights to these calls. I believe A1, A4, A5, and A6 are
: all allocated (can't remember exactly who, though). The US has allocations
: to "AA-AL."

Oh, well, there goes A1OP!

(Actually, I believe A1 as well as A0 cannot be allocated as a prefix.)

Will Turner, N0RDV, says:

>The US only has the
>first half of the 'A's, thus you can't have an A#XXX call. (Or A#XX, A#X)

I realize the callbook isn't the authority, but it show's that A0 and A1
prefixes aren't assigned to any other country. Since the US has AAA-ALZ
then it *might* be possible for the US to assign A0 and A1. Does anyone
know for sure (not just guessing, like me)?

|> Look at what the cops are driving. Ford Crown Victorias seem popular
|> with them, as do Chevy Caprices. Order your's with the same fleet codes
|> that they use and you'll have a car that works well with radios. (It'll
|> also have the heavy duty electrical system, cooling system, and suspension
|> of a cop car.) Get the same color scheme that they use for their unmarked
|> cars too, that way the antennas won't draw suspicion. (And you may avoid
|> some tickets.)

I had been thinking the same thing for quite a while, too. Only not for the
ability to work with radios, more because the Caprices look like they'll be

a comfortable ride and the antennas will look normal on them. In fact, I've
been trying to find the tiny antennas they have mounted on the roof immediately
above to rear window for scanner use. That'll definitely finish the image off.
Problem is, what are they usually tuned to? Of course, you could always get
a cellular lookalike 2m trunk lip mount to complement the roof mount.

/\

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

10 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 10 MARCH, 1994

NOTE: Stratospheric warming continues to exist from central and northeastern
Siberia to Canada and the adjacent Arctic. Warm air is spreading
northeastwards. The temperature gradient is reversed between 60N and
the pole from 10 HPA upwards into the upper stratosphere.

NOTE: The Effective Sunspot Number for 09 MAR 94 was 23.0.
The Full Kp Indices for 09 MAR 94 are: 4+ 6- 7- 5+ 5- 5- 5- 5-
The 3-Hr Ap Indices for 09 MAR 94 are: 34 72 111 56 42 37 39 37
Greater than 2 MeV Electron Fluence for 10 MAR is: 2.2E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low with five optically uncorrelated B-class x-ray events observed this period. All regions are exhibiting slow decay. New Region 7688 (N18E75) was numbered this period.

Solar activity forecast: solar activity is expected to be at very low to low levels. Region 7685 (S08W40) appears to have the greatest potential of producing C-class activity.

STD: Moderate to high densities of high-energy electrons at greater than 2 MeV have been observed since approximately late on 08 March. This is at least the third recurrence of these high-energy electrons and are thought to be associated with the current coronal-hole related disturbance.

The geomagnetic field has been at mostly active to minor storm levels the past 24 hours. Periods of major storm levels were observed at high latitudes. Storm conditions are believed to be the result of a favorably positioned coronal hole.

Geophysical activity forecast: the geomagnetic field is expected to be at mostly active levels for the next two days. Periods of minor storm conditions can be expected during high latitude local nighttime. The field is expected to be mostly unsettled to active on day three.

Event probabilities 11 mar-13 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 11 mar-13 mar

A. Middle Latitudes
Active 25/25/25
Minor Storm 30/20/15
Major-Severe Storm 01/01/01

B. High Latitudes
Active 30/25/25
Minor Storm 35/30/25
Major-Severe Storm 10/01/01

HF propagation conditions continue to be moderately to occasionally strongly degraded for transpolar and transauroral

circuits due to the enhanced levels of geomagnetic and auroral activity. Similar conditions are expected over the next 24 hours before levels of activity begin to subside on 12 and 13 March. Expect degraded propagation through at least 13 March for high and polar latitude paths. Middle latitudes should see a return to more stable conditions on 12 and (particularly) 13 March, if levels of activity do indeed subside by then.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Subject: Guy Tower with Phillistran Non-metallic ?
To: info-hams@ucsd.edu

In a previous article, wstrahl@cbnewsg.cb.att.com (wayne.a.strahl) says:

>I am posting this query for a friend who is considering guying his
>Rohn 60' fold-over tower with Phillistran non-metallic guy cable in
>order to reduce interaction with his low-band slopers and Mosley
>PRO-57A that is mounted on it.

A year ago, I installed a 58 foot Rohn foldover tower with steel guys at
the hinge (31 feet) and Phillystran at the top. It works great! Until
I put the guys on the upper half, it would really move about in the wind
out here in the country. The Phillystran kept the top stable and it does
not effect the two inverted V's hanging off the tower.

Nice stuff...

73, Drew K9CW

I own and modified two alinco radios a 590 & 560. I had the benefit of
paperwork I got from my local dealer, but when I opened the radios I found
the jumpers that were to be cut were EXTREMELY obvious. They were loops of
orange wire about 1/4 to1/2 inch long connecting two points on a circuit
board. They were the only such wires on the board. I would suspect that if
you open your radios you'll find the same sort of thing.

Subject: WARNING: Potential Satellite Anomaly Warning
To: info-hams@ucsd.edu

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 05:00 UT, 11 MARCH

/\

ATTENTION:

Moderate to high fluxes of high energy electrons at greater than 2 MeV
have been observed over the last 48 hours. Electrons became enhanced during
the mid-to-late part of 08 March and have been at particularly strong levels

over the last 24 hours. Total fluence for the event thus far is running
around 3.5E+09 electrons/cm^2-day-sr. If these fluences continue (and they
are expected to), some geosynchronous satellites may see charging-related
anomalies.

Electron fluence reached a new maximum today, at 2.2E+09 el/cm^2-day-sr.
This daily fluence value exceeds all other daily fluence values associated
with this disturbance over the last several months.

Based on recurrence, this electron enhancement should continue for
another 10 to 12 days. Updates will be released, as necessary.

** End of Warning **

SB DX ARL ARLD014
ARLD014 DX news

The items in this week's bulletin are courtesy of Rolf, DL7VEE, the
Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster
network and Contest Corral in QST. Thanks.

PRATAS ISLAND. The latest news is that the planned DXpedition for
this month has been scrubbed.

LACCADIVE ISLANDS. VU7LI continues both his geological surveys and QRP operation for a few more weeks.

KERGUELEN ISLAND. Listen for Pierre, FT5XJ, on 14188 kHz around 0330 and 1600z.

NEPAL. Equipment donations by DJ6SI and DJ6JC, with the help of EUDXF, DL9WVM and WB6ZUC, have put Satis, 9N1AA, and Surish, 9N1HA, on the air. QSL via PO Box 4292, Kathmandu, Nepal.

TONGA. Bob, W7TSQ, is island hopping as A35SQ around the main island of Tonga, much to the delight of IOTA chasers. He should be active until March 15. QSL via W7TSQ.

NORTHERN COOK ISLANDS. Amy, ZK1AT, has been on 3787 kHz at 0630z, 7205 kHz around 0715 and 0900, 14195 kHz at 0430z, 18150 at 2200, and 24950 at 2315. QSL via WB6EQX.

FERNANDO DE NORONHA ISLAND. Peter, PY5CC, is QRV as PY0FM until April 1. He prefers SSB, 160 and 6 meters, but also operates some CW and satellites. QSL his home call.

FRANZ JOSEF LAND. 4K2MAL has been quite active lately. Check 10104 kHz at 2230z and 0400z, 18072 kHz at 1645z, 14182 kHz at 1415z, and 7004 kHz around 0245z.

GUYANA. Larry, 8R1/N4VA, should be active for another week. His on the air times are fluid, so listen to the 20 and 15 meter IOTA frequencies, 14260 and 21260 kHz, for details.

NORTHERN MARIANA ISLANDS. JA1CMD will sign KH0/JA1CMD from March 27 to April 1, mainly on 80 and 40 meter CW. QSL to CBA.

COCOS ISLAND. Members of the OKDXA are planning a big TJI9 DXpedition for May.

THIS WEEKEND ON THE RADIO. Both the Kentucky and Wisconsin QSO Parties are this weekend. The Kentucky event, sponsored by the Paducah ARA, is from 1500z March 12 to 0300z March 13, and 1500z to 2400z March 13, both phone and CW.

The Wisconsin Party is sponsored by the West Allis RAC and runs from 1800z March 18 to 0100z March 14, both CW and phone.

The exchange for both events is signal report, state, province or country. Kentucky and Wisconsin stations will send signal report and county for their exchange. Full details/rules appear on page 111 of February QST.

I'm just a "functional illiterate" electronic tech. I'm not
much of a business man. However, I do know one thing. All of
this hullabaloo about the Hamblaster means exposure and that
what advertisers want. Just talking about is a form of

advertising. So whose the bad guy?

Well, guys, don't forget two crucial pieces of information about that call:
1) It is not a US callsign, it is Jordan, in the middle east;
2) JY1 happens to be King Hussein, who has done much to promote amatuer
radio in the middle east and throughout the world. He is also the ruler of
those issuing callsigns. Therefore he gets to pick the shortest and most
prestigious call for himself. His wife Queen Noor has the call JY1AA.

FYI, King Hussein visits the USA regularly, including both the Cleveland
Clinic and Mayo Clinic for health care. He has been heard locally on the
bands during his visits, and I hope to hear him speak some day at an
amateur club meeting.

Since a person has been writing me that it is not appropriate to post personal
equipment "For Sale" in this area, if interested, look in rec.radio.swap. It
appears that this individual feels that he owns this rec area and I only hope
that he is writing to all who post their ham gear (and computers) the same as
he has been bothering me.

I only posted in this area since I noted that other equipment was posted.
For all email, write to:

Trenton, New Jersey Amateur Radio/Computer Flea Market
HAMCOMP '94
Sunday April 10, 1994

Sponsored by the Delaware Valley Radio Association, HAMCOMP '94 is in a
new location, Trenton State College Campus, on Route 31 in Ewing Township
approximately one mile south of Exit 4 of Interstate I-95. Talk-in
frequencies are 146.67 (-600)--through the W2ZQ repeater--and 146.52
simplex.

Vendor setup begins at 6AM. Doors are open to the general public from
8AM to 1 PM.

Indoor table spaces in the nearly 20,000 square foot Student Recreation
Center are available for $20 each. This fee includes one general admission
ticket worth $5. There are about 100 outdoor tailgating spaces available
at $12 each including your admission ticket. General admission is $5.

Parking is free, and the facilities are handicapped accessible (barrier
free). Food and refreshments are available.

Amateur Radio examinations will be offered. For further information on
testing, please contact Don Wright, AA2F, in Pennington, at (609) 737-1723.

To reserve a table or tailgating space, please call the DVRA Hotline at
(609) 882-2240 and leave your name, number and best time to call back.
Someone will return your call as soon as
possible.

Subject: 1x1 calls
To: info-hams@ucsd.edu

A2 through A9 calls do not belong to the US but to other countries. I
believe the 1x1 calls starting with N are already assigned to aircraft.
(Note I said the 1x1 ones!) I am certain the 1x1 starting with W
are also assigned. You can forget getting a 1x1 call.

> Our local ares-races nets call the roll by suffix.

Good point, Bob. I guess you'd have to operate portable if you wanted a suffix. And if you wanted to keep your call as short as possible, I'd suggest Italy so that you could check into your ARES net as N/I. Of course, if it's a two meter net you'd better take a *BIG* beam with you.

> I would not be called when the sixes are listed for that rare island
> dx.

Since you'll be in Italy for the ARES net, your best bet would probably be to head down to Libya and operate as N/5A for the DX nets and wait for them to call for fives. But then I guess that would make *you* the DX, wouldn't it?

BTW, did we decide on the nomenclature for these calls. Are they 0x0's? ;-)

Greater than 2 MeV Electron Fluence for 11 MAR is: 2.3E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low with only a short series of
uncorrelated, small B-class x-ray bursts. Region 7689 (S11W38)
was numbered today.

Solar activity forecast: solar activity is expected to be
very low to low. Regions 7685 (S08W57) and 7688 (N16E60) have
slim chances of producing isolated C-class flares.

The geomagnetic field has been at mostly active levels
for the past 24 hours. Minor to major storm levels were
observed at high latitudes. Energetic electron fluxes
(Gt 2 mev) were at high to very high levels during the period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to active for the next 24 hours then
mostly unsettled for the remainder of the period. High latitudes
should continue to see minor storm levels tapering off to
unsettled to active by the end of the forecast period.

Event probabilities 12 mar-14 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 12 mar-14 mar

A. Middle Latitudes
Active 20/20/20
Minor Storm 20/20/20
Major-Severe Storm 05/05/05

B. High Latitudes
Active 20/20/20
Minor Storm 25/25/25
Major-Severe Storm 05/05/05

HF propagation conditions were below normal over most
regions. MUFs continue to be depressed by up to about 35
percent. Propagation was worst for transauroral circuits.
Similar conditions are expected over the next 24 to 48 hours
before conditions begin improving. The transition from
degraded propagation to near-normal propagation is expected to
be a gradual process covering at least several days.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Subject: Diesel or Taurus fr HF/VHF mobile??
To: info-hams@ucsd.edu

I got a variety of responses for a car which would be good for 100 watts
or so of HF and 50 or so of 2 meter and 440 radio. Criteria were lack of
interference from car into receiver and from transmitter into auto
electronics.

Diesels and the Taurus were among those favored. Anyone else have comments
on these choices.

Tnx agn Bob

Stabilant 22 is available from:

Soft Solutions
907 River Road, Suite #98
Eugene, OR 97404
Phone: 503-461-1136
Fax: 503-461-2005

Soft Solutions is a Service and Parts supplier for Macintosh computers.
The brochure I have (about a year old) lists it in a prediluted formula
(4:1 dilution with an ispropyl alcohol carrier) at $36 for a 15ml container.
(Phew! Don't spill it!)

Cheers,
Tom Leber

Subject: Russian Robinson Club
To: info-hams@ucsd.edu

Hello ALL

The radio amateurs-travellers club named "Russian Robinson
Club" interested in world island program - IOTA is applied
to separate radioamateurs, associations, funds and also
clubs, interests of which are equally connected to the
above mentioned club.
The club "RRC" (Russian Robinson Club) created at the
beginning of 1993 rendered support in organization more
than ten island arctic DX' pedition in 1993, two of which
are NEW IOTA:
4K2RRC (EU 019), 4K3RRC (EU 082), 4K4RRC (AS 005), 4K5RRC
(AS 025), 4K3GW (EU 161), 4K3WQ (EU 162), 4K3/RW3GW
(EU 082), 4K3/RA1ZA, 4K3/RA1WQ, UW1ZZ/A (EU 082), UW1ZZ/A
(EU 161), 4K4DV (AS 029).
During this year Russian island national diploma program
(RRA) has been developed like national island program of
Italy (IIA), Spain (IDEA), France (DIFM), Portugal (DIP),
Polska (SP IOTA A).
Competitors of this program have receive already more than
150 diplomas. We greatly hope that interest to Russian
national island "RRA" will be increased every year. Besides
it a list with separate numbering of Russian islands
according to "RRA" has been developed already.
Club "RRC" publishes magazin - report every quarter which
informers about members of this club; last island, polar and
sea expedition (.../mm); IOTA - News; database of Russian
island stations, antarctic station (4K1); diplomas and other
news.
Every Sunday at 08:00 utc 14.120 +/- QRM this club organizes
different discussions.
The club "RRC" includes a great number of polar explorers,
islanders, navigators which had a lot of expedition to
islands, Antarctica (4K1) and (.../mm). Besides it there is
a lot of radioamateurs interested in IOTA and "RRA".
At present this club experiences a great financial problems
for arranging expeditions to Russian islands and other places.
There are wonderful opportunities to visit many islands among
which rare available and desert, which are of great interes-
ting opportunities and suggestions.

This club has many problems with industrial radio equipment which is sometimes necessary in expeditions. Now many of radioamateurs work with home-made apparatus which often break at unsuitable moment. Sometimes there are rare possibilities to visit islands of Arctic and Antarctic basin. The club has a wonderful developed diploma program but financial means are greatly need for its realization.
Council of "RRC" applies to sponsor, radioamateurs, organizations, associations, funds and clubs to render any financial support in carrying out islands expeditions.
We shall also be thankful to all who give us any used (second-hand) industrial radio equipment for its further using in different expedition.
In all cases any sponsor will receive a description of events, photos, slides or videofilm from the participants of DX' peditions.
The sponsors indicate in their agreement what they want to have in return for their financial support or equipment. All those who will render any support in any cases they'll be free of charge subscribers of our magazine-report "Russian Robinson News". "RRC" invites all interested HAMs from different countries of the world to arrange joint expedition to the islands of Russia.

"RRC" can help to arrange any visit to any island of Russia and to settle all organization problems. Wait for your suggestions !

How often have you heard such exchanges:

DX: QRZ contest, this is Lima One Delta

US: (huh??) Your call again?

DX: L1D

US: (geez, a new one...) WB0X

DX: Station WB0X something?

US: Willy Baker Zero X-ray.

DX: Willy Baker Zero X-ray, full call please...

Aren't you glad you have a traditional call? Don't you wish
everyone else have them too? :-)

>Why is there no 10 meter activity?? Is it because of the band openings? If
>so, how do you know when the openings are good?? 10 meters seems to have
>become or is a dead band.

You would have found lots of 10m phone activity into South America
and the Pacific during the March 5 weekend (ARRL DX contest).

My log shows P4, PJ9, YV, ZP, V2, XE, LU, PY, KH6, CE, VP2V, V7,
KL7, T30, HP, HI, KP4, KG4, JA and CX on 10 meters phone last Sunday.

Granted, 15m and 20m were better into the rest of the world that
weekend, but 10m is far from "dead" yet. Maybe next year :-).

But, Jim. That's a 2x0! ;^) *AND* there's TWO of them:
JY1 and his spouse JY2
But then, he makes the rules, so his call can be anything he wants as
long as it conforms to the basic ITU allocations...

Thanks for the chuckle.

* *
* *

The following is a QST

The government is going back into court to try and set standards for what is deemed indecent on the air and a Chicagoland ham is a life saving hero.

*****
GOVERNMENT APPEALS INDECENCY RULING

A Washington D.C. federal appeals court will give the government another chance to argue that its ban on indecent programming on broadcast and cable television doesn't violate free speech.
According to the Los Angeles Times, the U.S. Court of Appeals for the District of Columbia Circuit, in orders dated Wednesday February 15 and released Friday February 18 said it will reconsider rulings that struck down the federal regulations as unconstitutional.
Last November 23, a three judge panel of the court had thrown out an FCC rule that banned indecent TV and radio broadcasts between 6 a.m. and midnight. That ruling said the regulation was an unconstitutionally broad encroachment on free speech. A finding in the governments favor will make it easy to prosecute anyone using foul language on the radio including potty mouth hams.

*****
FCC AND ARRL TO PROTECT JAMMER HUNTER IDENTITY

The ARRL and the Field Operations Bureau of the Federal Communications Commission have signed a new agreement concerning the use of amateur volunteers in the area of rules enforcement. The new accord adds an condition to protect the identities of Amateur Auxiliary members when the FCC institutes an enforcement proceeding involving information provided by the leagues Amateur Auxiliary.
The agreement is a revised and expanded version of one entered into in 1984 between the ARRL and the FCC. It spells out the roles of amateurs as trained and registered official observers, as well as the role of the Field Operations Bureau.
While the new arrangement continues to place the responsibility for initial information gathering at the local level, it also specifies a more centralized system for presenting information to the government in cases where enforcement action is requested. This will be accomplished between the Office of the Chief of the Field Operations Bureau and the league's Washington, DC office.
The volunteers will continue to be known as the ARRL Amateur Auxiliary to the Field Operations Bureau. The FOB also agrees to assist the ARRL in the training of volunteers and in publicizing the objectives and accomplishments of the program.
The bottom line is that jammers, foul mouths and other sources of interference had better watch out since members of the Amateur Auxiliary are probably already at work. The good guys now have

the same protection the bad guys have had for years -- anonymity. They will never know who the jammer hunters are but their work will pay off when an FCC inspector comes knocking their your door or a letter containing a notice of violation and a heavy fine shows up in the mail.
The new agreement became effective on February the 26th.

*****
CALL SIGN PLAN EXTENDED

The FCC has also granted an ARRL a request to extend the comment deadline in its vanity call sign proposal as outlined in Personal Radio Docket 93-305. The comment deadline has been extended to April 21st the reply comment deadline was extended to May 23rd.
The Commission's Notice of Proposed Rule Making was released December 29, 1993, with an original comment deadline of March 7, 1994. The League said more time was needed for response because of the importance of the proposal to amateurs and therefore the need to ensure fairness in whatever system was adopted.
In granting the League's request the FCC said that it believes it is desirable that the record be as complete as possible and that it reflect the views of the amateur community.
More on both of these stories in future Newsline reports.

*****
C-QUAM NAMED AM STEREO STANDARD

Its has only taken a decade for the FCC to finally decide to name the Motorola C-Quam system to be the national standard for stereo broadcasting on the AM broadcast band. The commission first authorized AM stations to broadcast in stereo back in 1982. At that time the agency declined to single out a single stereo system from the five competing systems available at the time. Instead it said that it wanted to let market forces to determine the course of AM stereo development.
The field of contenders quickly narrowed to two contenders. The Motorola C-Quam system and another developed by Kahn. In 1988 the FCC reaffirmed its decision not to mandate an AM stereo standard. It did note that the marketplace seemed to be converging toward C-Quam as the defacto standard.
But congress, recognizing the loss of revenues to the nations manufacturing and sales refused to wait. It wanted an AM stereo standard that the United States could market to the world. As a result, the 1992 Telecommunications Authorization Act directed the FCC to adopt a single AM stereo broadcasting transmission standard. It took almost another two years, but in January of this year the Motorola system was officially chosen.
Stations broadcasting using the Kahn system will soon have to cease using it. They will have the option of switching over to the Motorola C-Quam system or reverting to monaural operation.

For consumers who bought those truly rare AM stereo receivers, particularly those that receive other than the C-Quam system, you now own a piece of communications history. A part of history that did not survive in the AM stereo marketplace.

*****
Ham Radio Helps Save A Life

Now the story of a ham radio rescue as reported on the Genie information service. When Scott Montgomery, N9GLL, left for work last December 16th he didn't expect anything other than the usual--heavy traffic. But on passing a shopping mall he noticed a small car parked with its hazard lights blinking. Its door was wide open and an elderly man in the driver's seat was leaning back in an awkward position.
The driver apparently couldn't talk, but gestured repeatedly toward his chest. Scott correctly interpreted that the man was having difficulty in breathing, which is one sign of a possible heart attack. So he radioed his dad, K9DQU with "Priority Traffic." On establishing contact he told Jack Montgomery that an ambulance was needed quickly at the scene.
Jack called 911 requesting an ambulance and was transferred to the Chicago Fire Department. Scott stayed at the scene to pin-point the ambulance's destination.
When the paramedics arrived, they went to work on the sick man immediately. The ambulance driver radioed for a Fire Department engine company to help with needed additional manpower. At his request, Scott watched for and waved the engine company into position at the scene. Eventually, the engine company radioed the Chicago police to secure the sick man's vehicle, since obviously he was in no position to drive at all.
Before he left the scene, both the fire engine company personnel and paramedics praised Scott for his assistance to a citizen in need. This, because there seemed no reason to doubt that Scott Montgomery, N9GLL may well have saved the mans life.

*****
NARA

NARA, the National Amateur Radio Association says that its not as big as some of the rumors say, but it is showing the steady growth patterns it had anticipated. NARA was the brainchild of entrepreneur Donald Stoner, W6TNS who noticed that there was a gap that the ARRL was not filling, so he jumped in to fill the breach.

"We've done very well. We have about 7,500 members now. Our goal, I don't think it is overly optimistic to get 10,000 this year." Donald Stoner, W6TNS, NARA President.

Stoner says that the goals of NARA are fairly modest but defiantly attainable in his eyes.

"We, as you know, we are not anti league. We work, we actually stick to the beginners end of things. The league has to be all things to all hams. That makes their job much more difficult. Where all we have to do is help the beginner and aim our efforts towards the beginner." Donald Stoner, W6TNS, NARA President.

Stoner says that NARA not only supports the American Radio Relay League but he considers it as a membership feeder to the League as newcomers gravitate toward higher levels of sophistication in their ham radio careers.

*****
CLONED PAGERS

Illegally cloned pagers is the latest trick being used by drug dealers to avoid detection. The clones piggy-back on the pager numbers of legitimate users, preventing law enforcement agencies from eavesdropping on their illegal activities. The owners of the legitimate pagers may notice an increase in the number of pages they are receiving, but the strange codes displayed appear to be nothing but gibberish. Most pager users simply figure that a glitch has taken place in the pager dispatch system. The street price of an illegally cloned pager is in the area of seventy five to a hundred dollars, according to law enforcement officials.

*****
YAESU SPACE CAMP

Amateur radio has taken another step closer to the stars by reaching out to young people in Alabama. Beginning this summer, kids attending Space Camp in Huntsville will get an up-close demonstration of amateur radio. The program is the idea of a leading amateur radio equipment manufacturer.
Space Camp is an extremely popular activity for young people. Each year thousands of children go through a variety oft simulations and training courses. Its all designed to teach kids space travel and what being an astronaut is being like. Space Camp students are about to be exposed to amateur radio. Yaesu USA is donating equipment for two amateur radio stations at space camp. Kevin Karamanos, WD6DIH, manages National Sales for Yaesu Radio products.

"Every year we go to the show in Huntsville, Alabama, which is quite a big show in the southern part of the country and we usually go to the space camp for one day every year. We saw how many kids came through there and thought we would like to send our kids through there. Wouldn't it be great to teach kids about ham radio along with the space program." Kevin Karamanos, WD6DIH, National Sales for Yaesu USA.

Yaesu is providing equipment for a satellite and HF station. Huntsville hams will operate the equipment and will explain amateur radio to the children. Space Camp students will end up talking with astronauts in space.

"The goal is, when the orbiting space station eventually gets in the air. The future hams and future astronauts that go through and train here, the young hams. They can go ahead and operate and talk to the astronauts and pass some of the time away. So it is a good benefit for both." Kevin Karamanos, WD6DIH.

Space camp students will enjoy state-of-the-art technology, courtesy of Yaesu. Karamanos says the equipment supplied to the Space Camp stations will be Yaesu's latest--and greatest. Nor does the company's commitment to the nations youth end there. Yaesu is again serving as the corporate underwriter to the Westlink Report Young Ham of the Year award scheduled for presentation in early June.

*****
DX

In DXpedition news, word that an operation is being probable for Cocos Island beginning May 20th. A group is planning an all bands plus satellite and 6 meters operation. They will concentrate on CW, satellite and RTTY with QSL's will be handled by OKDXA. A list of operators will be published in the near future.

*****
HAM NEWS AND VIEWS

If you are planning to attend the 1994 Dayton Hamvention we want to invite you to come and also be a part of the biggest ham radio news seminar ever held. The two hour and fifteen minute session is titled "Ham News and Views from Around the World". Its a joint presentation of RAIN -- the Chicago based Radio amateur Information Network and of Newsline. The session runs from 2:45 to 5:00 PM eastern time on Saturday April 30th, and the guest list is truly the who's who in amateur radio news and information.
Jim Davis, KU8R, will be moderating the session with Hap Holly, KC9RP of RAIN and our own Newsline producer Bill Pasternak, WA6ITF as part of the panel. The star-studded guest list includes Jim Meachen, ZL2BHF from New Zealand. Jim is the president of the New Zealand Amateur Association of Radio Transmitters and hosts several ham radio bulletin services down under. And flying in from the United Kingdom is Peter Chadwick, G3RZP. Peter is the immediate past president of the Radio Society of Great Britain and the moderator of their GB2RS official bulletin service. While not with us in person, Hans van der Gronnendaal, ZS6AKV will be with the group through the magic

of videotape to tell us about ham radio bulletin services in his part of the world.
Three other United States services will be represented as well. Scheduled to appear are Len Winkler, KB7LPW who hosts "Ham Radio and More" out of Phoenix Arizona, George Bowen, N2LQS of the satellite delivered "This Week in Amateur Radio" from Albany New York and Dave Marthouse, N2AAM of Spectrum.
Never before has a group like this been assembled for as wide ranging a presentation as "Ham News and Ham Views from Around the World". It takes place on Saturday, April 30th from 2:45 to 5:00 PM Eastern time in Meeting Room 2 at the 1994 Hamvention in Dayton. We hope to see you there.

*****
For this week, that's all from the Amateur Radio Newsline.
You can write to us at Post Office Box 463 in Pasadena, CA 91102.

Mea Culpa, I grabbed that bit from _Mobile Radio Technology_ Oct 88 pp26,
and didn't proof it. You're right. I copied the formula incorrectly, and
was caught off guard by the author's non-standard use of ma to mean
microampere. Once I did a dimensional analysis, I found that the number
was in coulomb^2/hr which is fairly meaningless in this case.

Actually, I'd say *you* are the one who has made the leap (and bound?)... ;^)

For the best and most lucid description of character formation and
timing (what you refer to as dash-dot [sic] ratio) I suggest you read
the very excellent documentation that comes with SuperMorse... it is
truly worth the shareware fee, JUST for the docs and the treatise on
timing...

Ah, hate to get technical here, it is just r.r.a.misc, but we do NOT have the entire block of "A" calls... just AAA-ALZ. Hence A6H belongs to another land...United Arab Emirates, and i DO not see the Sheik giving that up to a US 6-lander!

A side note: a certain ham was issued KB4FU, and proudly got a callsign tag for his car. Someone in a supermarket commented to his wife, and suddenly he realized the potential for abuse of his callsign, phonetically speaking.

He quacked and fussed, and sent the call back to the FCC (for repairs?) and demanded a new callsign to replace the "obsene" one first issued...

Those who believe the FCC and the "Higher Power" have no sense of humor read on: Presently, there appeared on the gent's doorstep another envelope from Gettysburg... he tore it open and found....

This was a *real* mechanical injection diesel engine. With *all* electrical systems disconnected, it still made the pseudo-ignition noise. The best guess we could come up with was that the plasma formed by combustion was somehow shock exciting something and causing it to radiate. We considered static discharges due to the rotating machinery, but we bonded *everything*, including finger stock on the crank and cam, and on the injection pump cam, and we put anti-static brushes on the clutch, all without making it go away. So I don't think that was it. It would sit there at idle in the shop and tear up every radio in the place with absolutely *no* electrical equipment operating on the vehicle. A real puzzle.

I use the Down East Microwave loop yagis. They work fine.
I've also tried a 4 foot dish with dipole and reflector
feed. That works pretty good too, but the wind load is
considerably higher.

If you don't need that much antenna gain, Comet makes a cute
little yagi for 1296 that can be just the trick for making
a path that a vertical won't hack.

Well if it's a sport utility that you want, the Jeep Cherokee or Jeep Comanche pickup are hard to beat. The ride and bucket seats are *much* better than the Blazer (I've got a Blazer too, and the seats suck, plus it pitches a lot on rough roads.) or Bronco (another rough rider). My Jeep is electrically quiet except for a bit of alternator whine that I fixed with a choke, and the computer puts out a spur on 145.01 MHz. A couple of suppression capacitors and a bit of shielding fixed that. Mine is an 87 with 108,000 miles on it. My only expenses have been a bad oxygen sensor, a bad ignition sensor, and tires, gas, and oil. It's been a rock solid vehicle with a *great* ride for a 4x4.

I run radios in the Blazer too, and haven't had any serious electrical interference problems with it either. It's got 135,000 miles on it, and besides gas, oil, and tires, I've had to replace the shocks, water pump, and the entire HEI ignition. Not bad really. But the springs in the seats are shot (not that they were ever great) and it'll kill your back on a trip. The 94s have *much* better seats with good lumbar and lateral support. I've been eyeing them lately.

The company has some Broncos and Explorers. They've been radio hell. Noisy in-tank fuel pumps, ignition noise, alternator whine, gas *gauge* noise, injector noise, etc, etc, etc. We've pretty much tamed them, but it was a major job. If Ford built them the way they build police grade Crown Victorias, there would have been no problem. We've got several of them too, and they're dead quiet.

I live in Northwestern Vermont and want to include my ITU zone
and CQ area on my QSL cards, but I don't know what they are?
Can someone tell me or point me to a place to look?

BTW...TNX to those who responded to my noise blanker query. The
blanker could do me some good. The 'static' I was refering to
was a popping caused by my downstairs TV. I thought at first it
was my computer as my wife generally has them on at the same time.
I need to check out the TV for shielding, etc...

>OK, since everyone else is dreaming of confusing calls, how about if I get:
>W5HSI
>
>Try sending that one in cw, with a paddle, especially at hi speed.

Actually, that is not a bad call at all, except may be for code tyros.
I think that:
calls ending in k
calls with solitary dits that may be easily lost in fading/qrn
are much worse as even seasoned operators get them confused. Examples
are k9xxk or wb9eee.

When I got aa9ch, I naively thought that I would have a lot of confusion
with aa9cs. Not at all. What has caused a problem is that aa8ch,
w9ch, k2ch, k6ch are all cw active. Try working a pile up with aa9ch
call and couple of other ch thrown in.

The 3-Hr Ap Indices for 12 MAR 94 are: 29 34 80 46 46 16 25 24
Greater than 2 MeV Electron Fluence for 13 MAR is: 1.6E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. No activity beyond a B4/SF
flare in Region 7690 (S15W68) occurred.

Solar activity forecast: solar activity is expected to be
very low to low. Region 7688 (N18E33) has the best chance for
C-class activity.

The geomagnetic field has been at unsettled to active
levels for the past 24 hours. High latitude stations reported
occassional minor storm levels. Energetic electron fluxes
(GT 2 MeV) have receded to moderate levels.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled for the entire forecast period.
High latitude stations may still experience active levels for
the next 24 hours.

Event probabilities 14 mar-16 mar

Class M 01/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 14 mar-16 mar

A. Middle Latitudes
Active 25/25/25
Minor Storm 25/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 20/35/25
Minor Storm 30/15/15
Major-Severe Storm 10/05/05

HF propagation conditions were below-normal, but slowly
improving over the high and polar latitude regions. Middle
latitude paths were returning to near-normal values today.
High and polar latitudes should return to near-normal values
(with sporadic periods of minor night-sector signal
degradation) by about 15 or 16 March.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the

x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

: lot of the so called experienced old timers here from edu sites.
: Often even the headers are qutoed. I think that there is room for all. The
: more access, the more information. If people don't follow good procedure
: then just inform them gently and most will change.
Actually, I think it is great the both AOL and Delphi are getting access,
I gave a presentation to our Radio club about internet access through the
major providers in the hopes of getting a few of our hams involved. There
are two reasons I am a bit apprehensive about "a million newbies in one
fell swoop" number one is that there is less of an opportunity for these
people to learn netiquette before posting and many of them don't lurk for
two or three months before jumping in with both feet, a side effect of
paying for your first account I suppose. The second reason is that as the
internet becomes more and more crowded it is possible that some of the
commercial sites that provide free services to many of us in exchange for
understanding that this is supposed to be experimental may be forced to
stop due to extremely high loads. I am not suggesting that it is bad to
get as many people connected and educated as possible I am just a little
apprehensive.

cheers,
Dan

It depends on what you are going to do with your radio....

If you are going to work SSB, then one of the loop antennas is probably a good bet. The other choice is to get one of the antennas from Diamond or Comet.

I have been using antennas from these companies for years. I have two 1.2 GHz repeaters and the Comet antennas have been in service on the mountains for years.

I especially like the 1218G for my repeaters. They are single section design and work great at 3600 feet. For home use, I like the Comet CX-903. It is a tri-band antenna (2M, 70cm, & 23cm). Feed it with low loss coax, either 9913 or hardline (I use 1/2 Andrew hardline at home, at the repeater sites, I use 7/8" Andrew hardline).

2943. PS/2 into Repeater Controller

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-14 16:34:12 UTC
From: a4q4@jupiter.sun.csd.unb.ca
Message-ID: <1994Mar14.163412.24670@jupiter.sun.csd.unb.ca>
Source record: 269595

I have a PS/2 Model 30 sitting idle on my desk.....I have no hard drive for
it, so I'm looking for a possible application for it. I'd like to know
if anyone has any information on how I might change this unit into a
repeater controller.

Well if it's a sport utility that you want, the Jeep Cherokee or Jeep Comanche pickup are hard to beat. . . .

Without commenting on their suitability for radio (and I know at least one person who has had a large HF station in a Jeep), in this part of the country (Northern New England) used Jeeps have been known as cars to avoid due to the amount of rust they develop. This is not an issue in the southwest, and I doubt they use much salt on the roads in the Atlanta area. Your mileage (sorry) may vary.

My '94 Chevy Lumina Euro seems OK for HF; I'd planted my Kenwood
TS-140 on the passenger seat the other day, and had NO problems.
75W out on 20M thru the cigarette lighter; OK, large capacitor and
ferrite torroid on power lines, left over from my '88 Grand Am whose
"Driver Information Center" didn't like the 20M band :-). Couldn't
even find the "birdies" from the Engine Control Module's uP!

The only discernable "noise" is a small bit of hash from the fuel pump,
and a lot of hash when raising/lowering the power windows. I suspect
a simple LCL Pi filter on the fuel pump harness (near the fuel pump)
would take out the noise, but so does the noise blanker on the radio.

BTW:
Not to make this a big sale pitch for GM, but we do a LOT of RFI
testing on our cars to make sure that they neither corrupt nor get
corrupted by ham rigs. Stop by the GM booth at the Dayton HamVention
and we can talk some more . . .

^^^^^^^^^^
! WRONG !

We've been building diesel engine controllers for many many years.

In fact, we've got an engine controller for LP-fueled fork-lifts!

And we've got a controller for marine applications; one of them even
got submerged (with the boat) in salt-water for 10 weeks, and after
they dredged-out the boat (and cleaned-up the engine) the engine
started on the 1st-crank with THAT controller. But I digress.

There are several diesel models with computers controlling the
electronically controlled transmissions!

And what about the instrument cluster, CD player/Radio, etc.?

A large part of the problem is that these services offer "free trial memberships" and allow posting - thus you get people who go out and buy a modem, get on-line, post a blatantly offensive advertisement to non-commercial groups, and then go away, having used up their free trial. Not much we can do about that person; he's gone.

We have a similar problem here at the University each year as freshmen get their new computer access. Luckily more and more of them have some experience with computer networks when they arrive, but even so, that experience was gained at the expense of someone somewhere.

AOL, Delphi, Prodigy, and so on are just the latest instances of the newbie problem. Perhaps because the users of those systems are PAYING for their access it's harder to say to them "no posting until you know what you're doing!".

Roger asks:

Greetings...you'll have to excuse my lack of knowledge when it comes to using FTP procedures....haven't been at this long....using FTP I login to FUNE.FI, no problem there...once I find a .ZIP file I want I ask it to GET the file... again no problem, the program is sent to my local mainframe...I log off of the FTP address and go to the local mainframe and ask to send...I receive the file as a .ZIP but cannot UNZip it...I ALWAYS get "WARNING!" file fails CRC check or "has bad table"....on the local mainframe we have to use KERMIT to transfer files...or at least that is what I was told....like I said, I'm new at this so please exucuse my lack of knowledge associated with using FTP procedures...I thank you in advance for any information I might receive. <snip>

You need to transfer the file as a binary, to do this, invoke the "bin" (binary) command before the "get" command. If you are transferring several binary files, you only need to issue the "bin" command before the first one, it is a toggle to binary mode. Otherwise, the default file transfer mode is ascii. That should fix your problem. You may also want to make sure you have pkunzip 2.04 rather than an earlier version, since you can not unzip a file zipped with 2.04 with an old unzip.

Actually it could be done. You'll need some sort of card that will allow
you to control relays, etc. They sell them in some of the engineering
magazines for roughly $200.

The software end wouldn't be too complicated either, and with a hard drive
it'd be one kick-butt controller. Hell.. think of the mods you could make!

This is sorta like the burst we've seen in amateur radio with the Technician license.

Big jump of new people and not enough "old guys" running around to do the introductions....what it means is that we get to find out if "netiquette" is up to the task. if it works well for most it will continue pretty much the way it is, if it's not, it will "change" and either improve or degrade.

It's like the rear guard still fighting the battles over the use of the word "destinated" - usually by replacing it with something a lot more wordy that means "arrived".

2959. HELP: Hallicrafters Model S-76. SSB no good!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-14 20:52:38 UTC
From: cropley@cbnewsf.cb.att.com
Message-ID: <CMo9zq.Jvo@cbfsb.cb.att.com>
Source record: 269611

This weekend my Brother-in-law "dug-out" (literally) a SW radio
Hallicrafters S-76. It is a 9 tube unit double conversion Superhetrodyne
receiver.

I threw on a single long wire (will improve this later) and turned it on
lo and behold it warmed and started to work. My B-in-L estimated that the
unit wasn't powered up for AT LEAST 15 years .

I jumped to the 80 meter band and recieved CW fine. however when I went up
in the band to do SSB I go lots of signals but they were all distorted/muffled

The unit has a switch for either CW or AM reception. The manual says that if
I use the narrowest (sharp) filter and tune in the station then switch to
the widest filter it will then be ok for SSB reception.

The afore mention switch engages a BFO when switched to CW mode, but I
didn't read anything about AM.

Has anyone used one of these old birds?? Has modern technology of todays
transmitters made this units SSB or Psuedo-SSB capabilities a thing for
the muesum shelf (although it work fine for CW!!)? Maybe something is lacking
due to age or lack of use??

Many thanks for reading

Andy Cropley

Anyone have experience running a rotator with a power inverter?

The specific question is will one of the smaller rotors work with the
$100/200W units? Primary interest is use a backup power supply (marine
battery) for emergency services. I know that some of the cheaper
inverters only put out square waves. Does this cause a problem?

Thanks in advance.

Message-ID: <reid.673.763681435@ucs.indiana.edu>
Source record: 269613

My VW Diesel (now long gone) was an excellent radio platform. It was almost noise-free (slight alternator whine), and had a huge battery. Using LORAN-C (which is very noise-sensitive) in the Diesel was no problem.

Almost everything in my '93 Toyota truck makes RFI, including the cruise control, heater fan and wipers. The major problem I've found with new cars (with the possible exception of vans) is that there's no place to mount radios.

Plug them into the parallel port. Optoisolation is a good idea, but
beyond that, control is pretty direct. The serial port control lines
are also handy.

How about some information on what the vanity callsign program is and what
stage of proposal or reality is it. Does that mean I could get back an
old call I held if it hasn't been reassigned??

Jeff

2964. Parts for Heathkit???

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-14 23:08:14 UTC
From: mladair@mtu.edu
Message-ID: <2m2qou$b1r@pace2.cts>
Source record: 269616

From my understanding of things, Heatkit as we knew is is out of business. Is there a source where I can pick up replacement parts for one of their kits? Specifically the 51-120 Audio Transformer.

Thanks!

Matt Adair
mladair@mtu.edu

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z MARCH 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 MARCH AND FORECAST UP TO 17 MARCH

No warning is current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 087/030

1B. SOLAR FORECAST
15 March 16 March 17 March
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 090/034

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth : unsettled to active

Estimated Indices : A K Observed A Index 13 March
Learmonth 20 3432 4434
Fredericksburg 18 21
Planetary 25 22

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Mar 15 Unsettled to active.
16 Mar 12 Unsettled.
17 Mar 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Mar normal normal fair-normal

PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Mar normal normal fair
16 Mar normal normal fair
17 Mar normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were slightly above predicted monthly values

Observed T index for 14 March: 45

Predicted Monthly T Index for March is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
15 Mar 35 Near predicted monthly values.
16 Mar 40 Near predicted monthly values.
17 Mar 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

My father uses a TS 50 and an IC901 in his taurus. only noise is slight alt whine on the 901. Only effect caused by xmitting is changing the speed of the key-in-ignition chime when xmitting on 440. He's happy with car.

Of course I hold onto my old 71 VW bus. Point ignition, generator, etc. all waay in the back, entire body grounded, lotsa room for rigs, etc. I'd hate to lose that car!

: I jumped to the 80 meter band and recieved CW fine. however when I went up
: in the band to do SSB I go lots of signals but they were all distorted/muffled

: The unit has a switch for either CW or AM reception. The manual says that if
: I use the narrowest (sharp) filter and tune in the station then switch to
: the widest filter it will then be ok for SSB reception.
:
: The afore mention switch engages a BFO when switched to CW mode, but I
: didn't read anything about AM. ...

You are probably overdriving the detector. With the BFO on, the AGC
doesn't work, so the incoming signal can easily overdrive the detector.
(It's not a problem on CW since distortion doesn't affect copyability.)
Try turning down the RF gain control.

I just took 3b and 4a this weekend. I went to look at the available exam prep books today (neat coincidence). Anyway the W5yi stuff was really nothing but the questions and answers with just a little bit about the reasons or process. The AMECO books were slightly more indepth with regard to the answers. The ARRL book was definitly the way to go. It is organized with all the theory and regs in the front of the books with the appropriate questions listed at the end of the section so you can look at the exact questions.

I bought the ARRL book. Can't give a recommendation for tapes though, I am trying to use Super Morse. Still haven't passed 1b or 1c yet.

cheers,
Dan

2970. TX Amp for 20 mtrs QRP rigs.

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-15 06:21:14 UTC
From: asirene@ntuvax.ntu.ac.sg
Message-ID: <1994Mar15.142114.1@ntuvax.ntu.ac.sg>
Source record: 269622
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

Hi,

Need recommendation for a small TX amp kit which takes about 4 watts output from my QRP rig and puts out 20-30 watts with
built in T-R switching (preferably solid-state T-R) and runs off 12-13.8v DC power supply. Must be small so I can fit it into my
existing rig's casing. Should be something similar to the QAMP-20 from Ramsey Hobby kits. BTW, this is for 20 meters. Tks.

73,
Daniel

2971. Re: 1x1 Callsigns?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-15 10:00:46 UTC
From: WOLF KOEHLER <WKOEHLER@ESOC.BITNET>
Message-ID: <94074.100046WKOEHLER@ESOC.BITNET>
Source record: 269623

The use of prefixes A0 and A1 would require an additional allocation
by the ITU of blocks A0A-A0Z and A1A-A1Z to the United States.
This is unlikely since it is a policy of the ITU not to allocate
callsign blocks containing figures 0 and 1.
There is an analogy:
While Germany has DAA-DRZ, we will never have D0 or D1 callsigns,
even thoughprefixes D2, D4 and D6 are in use (by other countries,
though).
So you can drop that idea. 1x1 callsignon the other hand are of course
possible; it's entirely in the hands of the national authorities.
So keep on pressing the FCC.

73, Wolf.

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu or the Australia/
Asian-Pacific mirror at grivel.une.edu.au.

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
8085sys.zip - 8085 system software, from QEX 11/93 and 12/93
alinco_180t_mod - Alinco 180T modification for a TNC connection
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
antique_radio_info - misc info about antique radio collecting
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
bbs_interface_specs - specifications for message passing protocol
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
dx_w2iol.dat - data for all country prefix, position, etc
dx_w2iol.doc - documentation for the above database
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_index - quick reference index of elmers
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_shortwave - frequently asked questions about shortwave
fcc_part_97_1 - text of the FCC part 97 amateur regulations (part 1)
```

fcc_part_97_2 - text of the FCC part 97 amateur regulations (part 2)

Questions about FTP mirroring and access to appropriate software should be directed to me, or do an Archie search on the keyword "mirror."

For those without FTP access (and only those without FTP access, please), there is an FTP mail server at ftpmail@decwrl.dec.com. Send the word "HELP" to this address for more information.

Additional documents on Usenet and other newsgroups may be obtained from rtfm.mit.edu via anonymous FTP or via mail server (send the word "HELP" to mail-server@rtfm.mit.edu).

The American Radio Relay League has recently made available a mail-server to distribute many of their informational documents in electronic form. Send E-mail to info@arrl.org with "HELP" in the message body for more information. These files are also mirrored on ftp.std.com.

Yet another mail-server has been made available by Steve Harding, KA6ETB. Send E-mail to ham-server@grafex.sbay.org with "HELP" in the message body for more information.

Changes: new mailing lists, .packet rmgroup, and .policy updates

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

2974. Info Req. OMEGA SYSTEM

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-15 12:25:06 UTC
From: mabboux@vcnam.cnam.fr
Message-ID: <2m49f2$j19@sheckley.cnam.fr>
Source record: 269626

Hi!

I need regular information on the OMEGA SYSTEM ,
(10 kHz world wild interferometric radio localization network).

Where can I obtain information, as like on/off station/channel activity
or power modification .

Thanks for advance .

Bruno Mabboux .

ARRL Bulletin 26 ARLB026
From ARRL Headquarters
Newington CT March 14, 1994
To all radio amateurs

SB QST ARL ARLB026
ARLB026 Phone interference survey

'Phone interference survey

The FCC has released the results of a telephone interference survey just completed. 35 FCC field offices each picked three random cases of telephone interference on record and then visited the scene. The transmitting stations included 47 Citizens Band; 27 Amateur; 23 AM broadcast; 10 FM broadcast; and one international broadcast station.

At the location experiencing interference, the FCC's Field Operations Bureau personnel would first test the telephones on site, and then test their own ''bulletproof'' telephones, as well as several commercially available filters. 241 different telephones were tested.

Among the FCC's conclusions was that transmitter power did not seem to be a significant factor; they said that 10 watts or less caused telephone interference in one-third of the cases.

The FCC also said that filters worked only one-third of the time. ''Manufacturers can design telephones to be interference free,'' the Commission said, citing its bulletproof telephones, which were immune from interference ''virtually all of the time.''

The FCC said that it hopes that the survey will encourage affected parties ''to productively address and resolve this problem.''

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ.

The shape factor is the ratio of the bandwidth at the 60 db points to the bandwidth at the 3 or 6 db points. Some people also use the 80 dB down point instead of the 60. In ham world the most often used defination is 60 dB to 6 db points as it gives the best numbers hihi.

Without dipping into that pot, the need for a noise blanker has nothing
to do with the rest of the RADIO! Occasionally, and fortunately for
only short periods, external pulsed noise appears and my noise blanker
is very effective. I thought you asked if they were of any use.
If you never needed one, consider yourself fortunate. If yours didn't
work, at least the rest of your RADIO works well.

Source record: 269632

Sunday night, the weekend nearly over, I finally found time to descend the cellar stairs into the shack. There's still a novelty in stepping into what is for me, after near 20 years of hamming, my first dedicated radio-room.

I sat down just about in time to hear the higher-frequency bands fade and die.

One of the treats of escaping condminium life is that even my temporary antenna, a fairly low random-length wire strung to a tree for the winter, is long enough for work down to 160 meters.

So, after demonstrating once again that the old Drake 7 line can work just about anything it can hear, and not struggle on the receiving end either, I was itching for something a little different.

It was then I spied on the shelf a somewhat shopworn HW8, which I picked up for $35 at a shop specializing in used boating gear. I set it on top of the 'big' rig, and hooked up the antenna. And I took being able to quickly lay my hands on the power cord as a good omen.

Plugged in the power supply and switched on. Hmmm. No dial light. What's wrong? Oh. It doesn't *have* a dial light.

Forty meters was the usual disaster (why do I even check?) of broadcasting carriers. So I headed for the 80-meter Novice band, to see what was around.

So I headed for the 80-meter Novice band, to see what was around. After figuring out which transmatch to use, and hooking the 'just wrong' length of wire thereto, and dipping the SWR flat, it became obvious that there was a good deal around.

Now, running a DC receiver requires that you operate it, unlike the infinite-dynamic-appliances upon which the transceiver was sitting. The stronger signals required lowering the RF gain, so that they didn't sound all ragged. And I remembered something about which side of a signal to tune on... ...check the manual, whose pages are rust-stained from the staples having rusted during the rig's life on a boat. Oh, yes, tune on the HIGH side of zero beat, otherwise you'll be a kHz or so away from the person you're calling.

Okay, here goes. A nice loud station calling CQ. Don't know how loud, 'cause there's no S-meter, but I have to turn the RF gain way down, so that must mean he's S9! And a VE3 at that!

A quick call, and by gosh he heard my 2.5 watt whistle! He's in North Bay, which is quite a bit farther north and quite a lot colder than where I am. Both of us hear our XYL's calling us after 10 minutes or so, seemingly simultaneously (how does that work?). I can't hear it as well through the high-impedence headphones, but it was definitely something. My VE3 appends /QRP to the end of my call sign, which strikes me as kind of neat. It's fun to have someone else do your bragging, even though basic physics is nothing to brag about.

The contact renewed my appreciation for a really good receiver, since the band was kind of crowded. Though it does my heart good, every one of those signals had not one but two images in the passband, and audio filtering only served to make those images narrower, not to eliminate the extra one! So the gentleman above me had no reason to realize that he was QRMing my contact, and had every right to be a kHz up from where my friend and I where talking. So, ironically, it was the QRP station that had the problem copying the QRO station this time!

After checking on the call (something about bringing the laundry up) from upstairs, I decided to try again.

Tuning up and down, I hear a loud QRL? I sometimes, working QRP, will camp on a frequency where I hear someone tuning up, or getting ready to transmit intelligence, as four out of five times, a CQ is the very next thing that happens. And this fellow was a true gentlemen, calling QRL? several times with a few seconds of listening in between.

Sure enough, the CQ followed. An N2, right in New Jersey. 80 meters offers something that the higher bands don't... ...it allows contact between people who are local enough to one another to make the occasional eyeball QSO possible. That's how friendships get made. It's a good band. There was a time, before VHF and repeaters, that it was the main place where such things happened.

Ed also had no problem hearing my night-light-sized signal. He had been sending CQ at about 18 WPM, so I answered him a tick slower. That's my usual habit in the Novice bands, knowing that many people send, especially their CQs, a bit faster than they can actually receive.

Well, he had no problem. He saw my 15WPM and raised me 5, and now I was pushing my own rusty code speed's limits. But I held on.

I even resisted the temptation to toss my key out the window when he said "I HVE BEEN A HAM FER ABT 5 WKS NW ES U R MY 1ST NJ CONTACT."

So here I was, engaged in an Extra-Class speed CW QSO with a five-week Novice! It was also obvious that he, like me, was pounding away on a straight key. Not because he did a bad job of it, but you can tell when someone is using a device where it is possible to produce other than a 3:1 ratio. And towards the end of the half-hour QSO I could hear the fatigue in his arm. That kind of endurance isn't something you get in five weeks.

I said "WOW! 5 WKS AND ALRDY 20 WPM. U MUST BE A NATURAL."

"NO NATURAL. BEEN PRACTICING FER GENERAL TEST," he says.

"GO TAKE THE TEST. UR READY," I told him.

He asked me not to tell his XYL that I had a $35 rig that worked, or his funds would be cut off. So I agreed.

When we parted, I told him "BCNU ON 75 OR 160 METER SSB VY SOON I THINK."

As I headed upstairs, I reflected on this gentleman's talent and interest, and decided there's hope for ham radio, even ham radio as we knew it, after all. Of the dozen or so QSOs I've had down in the Novice CW bands over the last couple of weeks, fully half of these guys actually knew how to rag-chew and to talk about more than "UR RST RST 579 579 HR IN HAMTOWN HAMTOWN. NAME IS JOE JOE. SO HW CPY ES 73 SK"

Perhaps the other half, once they get over being nervous, will also learn.

I think I'll be on 80 CW tonight.

We are approaching Sunspot minima and MUF during this period of time is
at his low. Now is a time of real DX hunting with endles time spining
the dial of RX to be rewarded with unexcpected new country.
With beam you may have better chances especialy in south to north direc.
however be pationed and perssistent - in another 2 to 3 years 10 will be
back in all his glory. Follow the sunspot # on WWV or beter observ by
yourself with appropriate equipment - sun filters - since you can get
blind without them.

FROM: Scott Ehrlich, Software Librarian

FOR FURTHER INFORMATION, CONTACT: Scott Ehrlich, WY1Z
Tel: (617) 373-4198

PLEASE DISTRIBUTE AS WIDELY AS POSSIBLE

MARCH 15, 1994

WORLD HAM RADIO ARCHIVES MOVES TO OAKLAND

Due to a recent policy change from Software Tool and Die's
Internet computer system, the World, the ham radio archives from
World have moved to the very well-known anonymous FTP site of
oak.oakland.edu (141.210.10.117).

The directory on Oakland where the files will be locate will remain:
/pub/hamradio.

The Oakland FTP site permits a maximum of 400 simultaneous
anonymous FTP connections, so there should be plenty of space for
everyone to access what they want, when they want.

The directory structure on Oakland will remain the same as it was
on World.

If you have any questions, please feel free to contact me.
My e-mail address is: wy1z@netcom.com.

Satellite, shortwave and other electronic media news from Radio Sweden.

This week's bulletin was written by George Wood.

Packet Radio BID SCDX2196

All times UTC unless otherwise noted.

NORDIC MEDIA NEWS:

STOCKHOLM INTERNATIONAL--When the new Radio Sweden schedule goes into effect on March 27th, Radio Sweden is also officially launching Stockholm International on our FM transmitter on 89.6 MHz. The head of the Radio Sweden English Service, Sarah Roxstrom, discussed Stockholm International in today's edition of "MediaScan". For those of you who missed the program...

The channel currently carries a motley collection of programming from Radio Sweden in various languages (English, German, Russian, Swedish, Estonian, and Latvian), the immigrant programs department in many languages (Finnish, Greek, Serbo-Croatian, Macedonian, Slovenian, Assyrian, Spanish, Turkish, Polish, Albanian, and Arabic), and from domestic radio. Sarah Roxstrom:

"The idea now is to give this channel a new profile, more as a service to foreign visitors. This would mean extending the English and probably German programming. At the moment we broadcast an hour of the BBC World Service every morning between 6:00 and 7:00 AM local time. That's half an hour of "Newshour" at the moment, and half an hour of "Europe Today".

"From the 27th of March we're going to be broadcasting an hour and a half of "Morning Edition" from National Public Radio every day between 13:00 and 14:30 local time. That will be followed by the regular half hour from Radio Sweden in English. Because we're a local station, concentrating on Sweden and the other Nordic countries, we want to give our listeners the chance to hear world news from the BBC and from NPR."

When Sweden introduces Digital Audio Broadcasting, scheduled for 1995, Stockholm International will be one of the national channels in the DAB stream.

WORLD RADIO NETWORK--We're getting National Public Radio through the World Radio Network, which provides satellite channels in Europe and North America for international broadcasters in English, including Radio Sweden. WRN's Karl Miosga was also in today's program, where he announced that WRN is changing its audio subcarrier on Astra. The transponder will remain MTV's transponder 22, but on April 1 the audio will officially shift from 7.74 to 7.38 MHz. Tests will begin on the new audio frequency on around March 25th. The change is because many older satellite receivers don't reach 7.74 MHz audio.

Besides Stockholm International, WRN programming is also carried over Radio Finland's Capital FM in Helsinki on 103.7 MHz. In addition to Radio Finland, Capital FM rebroadcasts NPR and Radio Australia from WRN, as well as VOA, Deutsche Welle, and Radio France International. Cable systems in Europe relaying WRN include one in Croydon in the UK, and systems in Amsterdam and Dublin will be adding WRN at the end of March.

In North America a number of public radios stations will be carrying WRN programming.

Back here in Europe, WRN is working on adding a German service.

RADIO SWEDEN--When our new Radio Sweden schedule goes into effect on March 27th, we'll be available via WRN in Europe on MTV's Astra transponder 22, audio soon to be 7.38 MHz, at 20:00 hrs UTC, and to North America on the ASC-1 satellite, on SCOLA's transponder 23, audio 6.2 MHz, at 20:00 and 00:00 hrs UTC.

We'll also continue to be available in Europe on our own Astra channel, on the Sky Movies Gold transponder number 26, audio 7.74 MHz, at 16:15, 17:30, 21:30, and 22:30 hrs UTC and weekends at 20:30 hrs.

For those of you listening on shortwave, we'll be on the air to Europe at those times on 1179 and 6065 kHz, along with 9655 and 15390 kHz at 17:30, and 9655 kHz at 21:30 hrs. The 17:30 and 20:30 hrs broadcasts should also be audible in parts of Africa and the Middle East.

Our North American schedule will be at 12:30 and 13:30 hrs on 15240 and 17870 kHz and at 02:30 and 03:30 hrs on 6040 and 9850 kHz.

Latin American listeners can tune in at midnight 30 hours on 6065 and 9850 kHz.

We'll be broadcasting to Asia and the Pacific at 11:30 hrs on 13775, 15120, and 15240 kHz, at 23:30 hrs on 11910 kHz, and at 01:30 hrs on 9695 and 11695 kHz.

SIRIUS--Sweden's new Sirius satellite has begun testing from its new position alongside the Tele-X satellite at 5 degrees East. Sweden's TV 4, which is regularly on Tele-X, is also being relayed, as a test, on Sirius, on 11.932 GHz. And the Tele-X sound carriers, including Radio Sweden, are along as well. There have been tests in PAL on 12.015 GHz, and now there's a D2-MAC test pattern on 12.092 GHz.

Speculation continues about what stations may appear on Sirius. Can the Swedish Space Corporation lure Scansat to move its various TV3 and TV1000

channels from Astra? (Which would undoubtedly anger many Scandinavian Astra dish owners.) Bertil Sundberg speculates in "Paa TV" magazine that Scansat's FilmMax might consider moving from its location on distant Intelsat 601.

The feared interference between Sirius and Norway's Thor, located nearby at 1 degree West, and using the same frequencies, has not appeared (at least on my 1.2 meter dish, there might be more of a problem on smaller dishes).

FINLAND--All local radio licences in Finland are up for renewal this year. There are plans to build networks, and the national commercial TV network MTV (NOT the American music video network) has applied for a national radio licence. Currently Finland has no national commercial radio. (Kauto Huopio and FNB)

EUROPEAN MEDIA NEWS:

RADIO--There's a proposal for a new instore radio service for McDonalds. So far there's no indication where it might appear. But a radio station scheduled to appear on the CMT transponder on Intelsat 601 on 7.38 MHz has been delayed until May. It could be for McDonalds. (James Robinson)

There's a new radio station called "Arabic Radio" on MBC's transponder on Eutelsat II-F1, on 7.38 and 7.56 MHz. (James Robinson)

A radio station called "N-joy" is scheduled to begin on Premiere's Astra transponder 17 on 7.38 and 7.56 Mhz on April 4th at 16:44 hrs local time. (James Robinson)

CNN--CNN has appeared with a strong signal at 21.5 degrees East on 11.095 GHz. (Spyros Abatielos, Greece) Very curious. Eutelsat I-F5 is in this position, in an inclined orbit. Anyone else find this transmission?

ARIANE--The failure of the Ariane 63 launch, carrying the Turksat 1 and Eutelsat II-F5 satellites, was due to cooling problems and a faulty bearing. Alterations to equipment are now underway to prevent the re-occurence of such a problem, but this will mean that this year's launch schedule will not resume until the beginning of June.

This means that Astra 1D will not launch until December this year as a result of the Airane problems. The satellite was originally set for a September launch, but this will now not happen, putting a spanner in the works of a number of broadcasters who were counting on a successful launch on-time.

It is reported that all available transponders on Astra 1D have already been booked, although further details are yet to emerge. ("Skyguide")

QVC--The home shopping channel QVC, having lost its bid to buy Paramount in the US, is now said to be planning to expand into European markets. Clarification of the legal situation would, however, be required from the European Union. The current position is that teleshopping channels are prohibited unless they broadcast to one member state only. ("Skyguide")

QVC is currently part of the Sky Multi-Channels package. There are those who wonder why on earth such a channel bothers to scramble its signals?

NO NICK--Unconfirmed reports suggest that Sky and Viacom have dropped plans to launch Nick At Nite, advertised as part of the Sky Multi-channels package. Earlier reports suggested that the channel had been delayed due to problems with program rights and acquisitions.

In the event that the channel is dropped, at least for 1994, it is likely that the Travel Channel, already broadcasting on Intelsat 601, will be offered time on Astra and will join the multi-channels package to replace Nick at Nite.

In this event, the only apparent spare time is the 6:00 AM to 7:00 PM British time on JSTV's transponder 24, or the currently vacant (and Sky-owned) Transponder 47, which could be a more likely option. (Transponder 24 is now showing a new Astra promo tape in several languages during the spare hours.)

The Travel Channel currently broadcasts midday to midnight on Intelsat, so while there is enough time available on transponder 24 to carry the channel in its entirety, the time-shift could be a problem for the channel. ("Skyguide")

CHINESE CHANNEL--The Chinese Channel has announced that it will launch its European service on Astra on March 18, although it refuses to tell anyone which transponder it will launch on. ("Skyguide")

SKY SPORTS--Sky has temporarily shelved plans for Sky Sports Two (again) by transferring football matches which clash with the current West Indies cricket coverage to Sky One. The move is partially for technical reasons, namely the difficulty in getting viewers to re-tune their receivers, but primarily for marketing reasons. The soccer matches on Sky One are achieving very respectable ratings, and is
likely to bring an increased number of new subscribers to Sky Sports. ("Skyguide")

SKY FREEBIES--While the soccer is screened on Sky One, all the Sky Multi-channels broadcast in soft videocrypt mode, so a viewing card is not required. Again, this is partially for technical reasons (there are some Sky Sports subscribers who do not take multichannels), but also with the marketing intention of capturing the die-hard viewers who have not taken up a subscription to multichannels. ("Skyguide")

SKY MOVIES FREEBIES--Sky's promised preview weekend for non-movie subscribers, delayed from its original date in February, has now been announced for the weekend of April 9 and 10. The previous attempt had to be cancelled due to the objections of several major movie distributors. Presumably these difficulties have been ironed out, since Sky intends to "give away" a number of major movies in the April weekend, including Wayne's World, Cape Fear, Lethal Weapon 3, Alien 3, Edward Scissorhands and Star Trek 6. Sky Movies Gold will apparently not be included in the promotion. ("Skyguide")

INTELSAT--United Artists, provider of a number of television channels for the cable television industry in the UK, has announced that it will cease its conventional PAL broadcasts of Wire TV and The Parliamentary Channel in May, in favor of a digitally compressed service.

The channels will share just one transponder on Intelsat 601, thus saving UA some GBP 1.2 million a year in transponder and uplink rental. While cable operators will have no trouble obtaining suitable digital decompression equipment, (UA would be able to afford to give it away since it is saving so much money on transponder rental) home viewers are likely to be very much left out in the cold. ("Skyguide") Wire TV is already broadcasting coded, using the SAVE system, and shares its current transponder with the Learning Channel.

EURONEWS--Euronews, the troubled pan-European news channel, is in danger of being closed down because of spiralling costs and dwindling viewer levels. The channel faces impending competition from a news service planned by TF1. TF1 is to launch its news channel on June 24th. Jean-Pierre Elkabbach, chairman of France Television, has held initial talks with ARD in Germany. France Television said that ARD should invest in the channel and provide German-language news material. Discussions have also been held with RAI in Italy to operate on a similar basis. ("Satnews")

EUROPEAN CABLE TV ALLIANCE--A major pan-European cable television joint venture has been formed by Philips Media and United International Holdings Inc. An agreement in principle has been made to operate pan-European cable television services.

Philips currently has cable TV interests in Germany, the Netherlands, Belgium, France and Austria, and United has interests in Norway, Sweden, Ireland, Hungary and Malta. Cable services belonging to United in Israel will also be brought into the venture.

Out of the combined cable services, more than 1.5 million of the 2.5 million homes that are passed for service are connected and paying monthly subscriptions. The joint venture will be the largest privately-owned, multi-channel subscription TV company in Europe.

The alliance, subject to regulatory approval, will be concluded by the autumn. ("Satnews")

UKRAINE--A weekly 50 minute program from the Ukraine will be carried every Friday via the Ghorizont at 11 degrees West. This has been monitored between 22:50 and 23:42 hrs following OITV programming from Ostankino Channel 1 TV from Moscow on C-band 3675 MHz. (BBC Monitoring)

NORTH AMERICAN MEDIA NEWS:

INTERACTIVE TV--A well-publicised trial of futuristic cable television services has been delayed by Time Warner for six months as the technology is still not ready.

A spokesman for Time Warner Cable said that a trial of interactive television will be delayed until October at the earliest in Orlando. The planned Full Service Network trial is delayed due to refinements within the set-top control box and network computer software. But the company believes that it will still be providing service to more than 4,000 homes by the year-end, and 80 percent of its 7.8 million customers by 1998.

While Time Warner delays its service, AT&T, TCI and US West are extending an existing trial of Viewer-Controlled Cable TV until the end of June, adding a range of new features in a bid to gauge user feedback. The companies said that a number of operational changes will be made to the pay-per-view and video-on-demand cable television
service.

One of the new services will be a personal intermission service, whereby a customer can halt a video programme for 15 minutes at a time, rejoining the programme on another channel later. New programming will also be added to the service to assess whether customers are influenced by greater programming and technology changes. Trials of the network have been ongoing since 1992. ("Satnews")

LATIN AMERICAN MEDIA NEWS:

RADIO--The first Christian radio network via satellite in Latin America, ALAS, will soon begin technical tests, using an Intelsat 6 satellite (presumeably C-band on Intelsat 601 at 27.5 degrees West or Intelsat 605 at 24.5 degrees West). (HCJB via BBC Monitoring) Previous reports have indicated ALAS would use digital encryption, unfortunately denying HCJB reception to TVRO owners in the Americas.

ASIAN MEDIA NEWS:

INDIA--All India Radio is planning to introduce 20 radio channels, via 5 transponders on Insat 2B. Twelve of these channels will be earmarked for regional languages. (BBC Monitoring)

PUBLICATIONS:

The new edition of Radio Sweden's booklet "Communciations in Space: The DXers Guide to the Galaxy" is now available free of charge. Just write to Radio Sweden, S-105 10 Stockholm, Sweden. You can also send a fax. After the international access code from your country, the number is: 468-667-6283.

Sweden Calling DXers is the world's oldest radio program about international broadcasting. Radio Sweden has presented this round-up of radio news, features, and interviews on Tuesdays since 1948. It's currently broadcast on the first and third Tuesdays of the month.

Radio Sweden broadcasts in English (beginning Mar. 27):

Europe and Africa:

16:15 hrs on 1179 and 6065 kHz
17:30 hrs on 1179, 6065, 9655, and 15390 kHz
20:30 hrs on 1179, 6065 and 9655 kHz
21:30 hrs on 1179 and 6065 kHz, and
22:30 hrs on 1179 and 6065 kHz

Middle East and Africa:

17:30 hrs on 6065, 9655, and 15390 kHz
20:30 hrs on 6065 and 9655 kHz

Asia and the Pacific:

11:30 hrs on 13775, 15120, and 15240 kHz
23:30 hrs on 11910 kHz and
01:30 hrs on 9695 and 11695 kHz

North America:

12:30 and 13:30 hrs on 15240 and 17870 kHz
02:30 and 03:30 hrs on 6040 and 9850 kHz

South America:

00:30 hrs on 6065 and 9850 kHz

The broadcasts at 16:15, 17:30, 21:30, and 22:30 hrs (and weekends at 20:30) are also relayed to Europe by satellite:

Astra 1B (19.2 degrees East) transponder 26 (Sky Movies Gold/TV Asia/Adult Channel) at 11.597 GHz, audio subcarrier at 7.74 MHz,

Tele-X (5 degrees East) (TV4 transponder) at 12.207 GHz, audio subcarrier 7.38 MHz.

Radio Sweden is also relayed to Europe via the World Radio Network on MTV's transponder 22 on Astra, audio 7.38 MHz, daily at 20:00 hrs UTC.

Radio Sweden can also be heard on WRN's North American service on ASC-1, on SCOLA's transponder 23, audio 6.20 MHz, daily at 00:00 and 20:00 hrs.

Contributions can be sent to DX Editor George Wood by fax to +468-667-6283, from MCI Mail or CompuServe to the CompuServe mailbox 70247,3516, from Internet to 70247.3516@compuserve.com, or to SM0IIN at the packet radio BBS SM0ETV.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

Our 1991 Toyota Corolla and 1992 Mercury Sable are clean on 2 mtrs.
I was advised by others to have the dealer install a filter available
on request at no charge from Ford (Mercury). I have not heard any
noise, so I guess they did it as requested.

(The Corolla is more fun to drive. The Sable is nice and comfortable
on the highway but you have to enjoy poor handling :-).)

> -Steve

Steve: static crashes caused by lightening are broadband noise and will
not be removed by a noise blanker. Noise blankers work well on repetitive
pulses. Try turning on an scr that's broadcasting pulses. The noise
blanker should attenuate it. When that kind of noise drowns out signals,
the noise blanker on my TS440 removes it so effectively that I have to
occasionally turn off the blanker to see if the noise is still there.
On the other hand, the blanker won't take out the spark generated noise
from an electric mixer. I believe that most of the noise sources I
hear come from neighboring homes and usually they only last a few minutes.
Usually, the blanker works like magic. Sometimes it doesn't help at all.

2994. Ham Radio FTP area on World

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-16 04:00:10 UTC
From: wy1z@netcom.com
Message-ID: <rec.radio.info-ham.radio.ftp_763790409@ve6mgs.ampr.ab.ca>
Source record: 269646
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info,rec.radio.scanner

This is a periodic reminder that the Boston Amateur Radio Club maintains an FTP area on world.std.com (192.74.137.5) in pub/hamradio.

This area is accessible via: anonymous ftp, gopher, and World Wide Web (and possibly other methods I'm not yet aware of). World is not *fsp*-able yet (I asked them).

Via Gopher, the easiest path to the area is by selecting the following from World's main menu:

18. Membership and Professional Associations

3. Boston Amateur Radio Club

And go from there...

Please feel free to browse through the area.

If anyone has any questions about it, please do not hesitate to e-mail me.

Also, up-to-date copies of the files on the ARRL's information server (info@arrl.org) are available in the directory pub/hamradio/ARRL/Server-files.

All text files are uncompressed, so they are both retrievable and viewable via Gopher and World Wide Web. (If you have any troubles with any text file, please e-mail me).

Source code for programs is always welcome. It can permit people to use those programs on other computers with other operating systems.

Scott

2995. Re: Info Req. Vintage Gear

Newsgroup: rec.radio.amateur.misc

>
>I am concerned about availabiliy of service info and not paying too much
>(I would not pay HRO-60 prices for a Knight Ocean-Hopper :-))
>
>Any direction and comments from like-interested people?

Kevin (and anyone else who might be interested): There is a newsgroup/
email reflector called `boatanchors' that is dedicated to amateur
tube gear. To subscribe send an email to boatanchors-request@gnu.ai.mit.edu
and ask to be placed on the list. You'll get from 20 to 30 articles
via email daily. To post an article just use the above address WITHOUT
the `-request' portion.
Lots of VERY knowledgable and friendly folks on there.

73,
Jeff NH6IL

2996. 2x0 callsigns? (was: 1x1 Callsigns?)

Hey, who ya talkin' about, Bob? AH6FU is a Hawaii call, and there's only
one Hawaii ham who posts on here.... (oh my God - is he referring to me?)

I guess Hawaii hams will be vying for 2x0 callsigns since we have to
have the mandatory `H6' in the prefix. Not much of a choice:
AH6, KH6, NH6, WH6. Phooey. [Hey, now there's a neat call: PH0OEY.]

2997. Re: Licensing in Japan

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-16 13:11:32 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CMrDz9.3I7@hpqmoea.sqf.hp.com>
Source record: 269649

Well, thanks for the posting. I'm just staggered that there are so many licencees given the synthetic obstacles. I guess Japan may not be alone though, some other countries have overwhelming burocracies. Anyone know the conditions in ,say, India ?

Massive fees and forms for any station change ought to make sure no-one wants to do homebrew, or is that the purpose of the "Guarantee" thing ?

Not planningto emigrate

> my 2 meter HT along. Anyone know anything about 1) licensing, and
> 2) frequencies. Any help? Thanks.
>
> Mike, N4PDY

well if you guys stopped funding the IRA, the airport would be a bit
safer....

Here's the latest band plan...

2 metre band plan for London - 144 - 146 MHz

144.000 - 144.150 Unlicensed Taxis

144.150 - 144.500 Wide Unsupressed Interference from QRO SSB rigs

144.500 - 144.700 Packet Data - mostly BBSs with illegal
adverts and people moaning about packet being too slow

144.700 - 145.000 RAINET - Radio Amateur's Interfering Network

145.000 - 145.175 Inputs to Music Broadcast Relays

145.200 - 145.575 Simplex channels for persons who can't ident
because they don't have a licence

145.600 - 145.775 Repeaters outputs - listen on these channels to
hear the Top 40, Raves, etc

145.800 - 146.000 Unlicensed Taxis

Enjoy.

73 G0PUB
Peter.

2999. 10 GHz EME question

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-16 14:49:45 UTC
From: MOWE%SLUMUS.BITNET@CUNYVM.CUNY.EDU
Message-ID: <16MAR94.10615803.0021.MUSIC@SLUMUS>
Source record: 269651

The Toronto VHF Society (VE3ONT) is beginning to make
plans for EME operations using the 46 m (150') dish at
Algonquin Park later this year.

We have been discussing the possibility of trying EME on
10 GHz. The dish is figured to at least 12 GHz, and is
adequately steerable. The question is this: is there any
point to using such a big dish at 10 GHz for EME? One
argument says "yes, the gain will be humungous." Another
argument says "no, the high gain of the dish will under-
illuminate the Moon so there is no *real* monster gain."

I subscribe to the latter point of view. It seems to me that
an antenna beamwidth of < the Moon's diameter doesn't benefit
the overall link budget. By this argument, 10GHz EME is
optimum with a dish about 4m in diameter (beamwidth about 0.5
degrees, the apparent width of the Moon). The 46 m dish will be
no better than a 4 m dish.

So... am I correct?

Hello folks,
Does anyone know where I can get information
on the L2 program used by Baycom. This is the TSR program that
is used to interface the Baycom terminal program with the hardware modem.
I am interested in cpu registers etc. that are used to communicate with
this L2 driver. Any info/sources would be appreciated.

Yaesu had problems with the VFO knob. It kept falling off. When mine did that, I drove to Cerritos, since I work about 30 minutes from Yaesu and gave them my FT-530 to fix the problem. The tech did not like the way the squelch was acting on the UHF side, so he noted to repair that also. When they were done, two days since it was under warentee, I had a new VFO knob, fixed squelch, and a world amateur map. The knob is a know problem.

This week on Spectrum we will talk about receivers. Our guest is a man who knows them from antenna jack to speaker. Larry Van Horn answers technical questions all day long on the Monitoring Times answerline. Larry has the opportunity to test almost everything that comes down the pike and with that unique position he can give a great overview of receivers. Bring your questions to Spectrum this weekend and get them answered from the expert.

Next week on Spectrum (Saturday March 26'th) Spectrum will feature a look back at radio and telecommunications history through the ears and eyes of Don Kimberlin. Don worked in all aspects of radio and tellecomm from the 1950's through today. He has an interesting perspective on the communications industry and is a living archive of high-tech history. The only way anyone can know and interpret the future is to see it after understanding and learning from the past. Don is a high-tech historian and you will see why on Spectrum.

As many on this newsgroup know, I'm a big TS-850 fan and have owned
more than one - my first being one of the first to arrive into the
local store.

Last weekend, at Phoenix's largest annual swap meet, I saw about
three or four TS-850's for sale, all for around $1250.00 each.

But, I didn't see any FT-990's for sale... Hmmmmm.

I still like my 850, but lot'sa folks really like the 990.

3005. Sorting the confusing between World and Oakland

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-16 20:47:45 UTC
From: wy1z@netcom.com
Message-ID: <wy1zCMrz3L.B6H@netcom.com>
Source record: 269657
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

I have received many questions about where the ham radio FTP files are -
World or Oakland?

When I posted the message about the switchover from World to Oakland, I'd
completely forgotten about the automated period reminder about the file
availability on World.

I have modified that periodic reminder, and will have it replace the one
mentioning World. It will, instead, mention Oakland.

Sorry for any confusion or inconvenience this may have caused.

Our local club had a presentation by one of the people at
the Big Dish in Areciebo and his comments on EME work was that
libration fading was much better □ with the smaller portion of
the moon being illuminated. (He quoted some ridiculously small
spot on the moon, I think I've misremembered it in the thousands
of meters wide (can't be that small, can it?) - but then it is a
spherical dish with 89 db of gain or so on 432 mhz...) Apparently
they use about 10 watts for EME on 432. (and have a big
transmitter in the Megawatt range, before antenna gain, for
radar mapping stuff.) Very interesting talk, wish I had written
some of it down.

Anyway, it seems his comments dovetail with Gary's.

Michael R. Owen sez:

>Another argument says "no, the high gain of the dish will under-
>illuminate the Moon so there is no *real* monster gain."

Can you explain the "real monster gain"? It seems to me that, since the
moon's surface is approximately spherical, most of the RF that hits
off-axis will be dispersed into space and not reflected back to the earth.

My seat-of-the-pants tells me to concentrate all RF at the center the moon.
[That is, if the dish has the precision to maintain the center of the moon.]

Yes, but at a mere 18,000 pounds not many can afford such a car. Practically, I found the Cavallier reasonable RF quiet. Fiat Uno, too noisy. Diesels are definately better, they have a bigger battery too.

>

As far as I remember from may days at the Nautical College Rotterdam (Radio
officer training) there really is an imposed standard.
Somewhere I must still have my "Handbook for use in the maritime mobile and
maritime mobile satellite service" being a subset of the Radio Regulations
from the ITU. There might be more info. From my memory:
Shipping: Fixed stations (coast stations): XXX(#(#)) meaning three
alpha's as main callsign, to be used on the general calling frequency's
whereas a numerical suffix (to the call) is allowed to identify different
frequencies in different bands.

Mobile stations (ships): XXXX or XX####(#). De XX####(#) version is often
used for yachts, and non-seagoing vessels. The XXXX is used (by tradition)
by large seaships (cargo vessels, passenger liners etc.)

NB: There is no such thing as prefix here. Just callsign and suffix.

>As I said before, I only heard about this system for amateur calls. There may
>possibly be some system for other calls, also, but I have not read of it
>anywhere that I know of...
>

>>British aircraft registrations and callsigns look like 'GBOAC'. I expect more
>>than a few D.C. area residents have seen that ....
>>
According to same source as above Aircraft use XXXXX as callsign. No
prefix, no suffix. Sometimes there also variations like X(X)#####(#)
probably just like shipping because of limited number of possible XXXXX
calls.
>>Oh - and where's the necessity to have a *number* to separate a prefix from
>>a suffix??? When you operate in another country, don't you (generally) take
>>the prefix (ITU assigned) and separate it from the suffix (your entire call)

Wasn't that the otherway around these days? <foreign prefix>/<your call>?
>
>I'm sorry to sound as if there must be a number between them; I meant there
>must be *something*. A prefix and suffix must have something to be the prefix
>and suffix of, and in this system it is always a number. This makes it easy
>to tell the prefix and suffix, even in the prefix has a number in it. The
>separator (or the mandatory number as I called it earlier--however misleading
>it was) is always the *last* number. (Thus our recurring A6#XX has # as the
>separaotr.)

According again to above source, I recall the imposed call-sign scheme for
amateur radio is : XX#XX(X). Because many callsigns go back way before these
regulations, old callsign are allowed, provided the prefix is according to
the current prefix allocation.
Country's are free to attach a meaning to the '#' (geographic location or
licence type or clubstation or repeater or whatever) and basically
two-letter suffixes should not be assigned anymore. They should die out of
old age, leaving only three-letter suffixes (but then - we're all going
that way).

I still have some ITU docs lying around somewhere or stashed in a box on
the attic from my sea-going period (stopped in `82). If someone doubt my
response (or rather a lot of someones) I might try to dig 'em up.

From: eckman@eos1.larc.nasa.gov
Message-ID: <2m9is3$b1q@reznor.larc.nasa.gov>
Source record: 269666

With regard to the apparent international regulations requiring a
specific format to an amateur callsign, could someone actually
dig up article 32 of the ITU regulations (which deal with amateur
radio communications) and let us know what it really says?
Drawing analogies with AM radio station callsigns, coast guard,
and airplane designators strikes me as entirely beside the point.
The fact that the Marshall Islands are not using a number following
their V7 prefix is not proof that a number isn't necessary. They
may just be ignoring or ignorant of ITU regs.
Could someone please quote the relevant ITU regs for us? Maybe
someone at ARRL HQ with easy access to the text.

ARLX013 HamVention award winners

HamVention award winners

For the fourth time in the past five years, an ARRL dignitary has been named the Dayton HamVention Ham of the Year.

Chosen this year was Perry Williams, W1UED, who retires at the end of April as ARRL Washington Area Coordinator, after 40 years of League service.

Perry is featured in a story about the League's Washington office that will appear in April QST.

Receiving the Technical Achievement Award is Dick Newell, AK1A, of Bolton, Massachusetts, the inventor of Packet Cluster. A QST story about Newell appeared in August 1990 QST on page 54.

The DARA Special Achievement Award goes to Russell Kroeker, N7HGE, of Kent, Washington, whom the DARA credits with conceiving the Evergreen Intertie, a system of interlinked repeaters stretching from California to British Columbia. A description of the system is in June 1991 QST, page 83.

Previous Dayton Hams of the Year include former ARRL President Harry Dannals, W2HD (1993); International Amateur Radio Union President and former ARRL General Manager Dick Baldwin, W1RU (1992); and ARRL Hudson Division Director Steve Mendelsohn, WA2DHF (1990).

The awards will be presented at the Dayton HamVention, April 29 to May 1, 1994.

I have had several QSOs with people on 10 meters who were using converted
CBs. I have a CB sitting in my junk box and was wondering if it could be put
to use in the 10 meter band. Is there some service center I can send it
to have it done? Is it something I can do myself? (The CB in question is
a Cobra Model 19 Plus, manufactured in 1988.) In general, how hard is it
to do this (ie maybe easier on older model CBs)?

Enquiring minds want to know. :-)

TNX and 73,
Erik

Back in the early days of radio, the US Navy was the primary user. As more and more Amateurs took to the airwaves, their interference to the Navy ops grew. It was during one particularly bad QRM experience that some Navy operator whose name is lost to history referred to the source of his QRM as "those hams!" He was not pleased and the reference was derrogatory, but the Amateurs thaought it was great and took it as their own. I guess that shows that Amateurs had "attitude" even back then! :)

Sandy: I have the new Heil Pro-Headset and an FT 1000D and their is a problem. The headphone jack in the 1000 is driven by a low level stero signal for seperation of the two rx. when in the dual mode. The normal speaker output is a both signals summed output at higher level. the Heil set appears to be a 4-8 ohm device looking for the kind of drive available from the speaker jack. The haedset works fine if I connect it to the speaker output but has far too low audio level if I connect it to my headphone jack. 73 Bill

What part are you taking offense at Iain, the bit about the IRA funding or the alledged bandplan for London? It's a bit unclear from the way you edited his posting.

There are more deaths from gang activities in Los Angeles County alone in one month then there are from IRA bombings for the whole year.

I'd almost rather be living in Ireland, except that it is *in* Ireland.

3025. Re: 1x1 Callsigns?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-17 17:33:52 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CMtKsI.8ty@hpqmoea.sqf.hp.com>
Source record: 269677

ITU regulations govern what sorts of radio transmissions a country may permit. The country is free to choose not to permit all of the things that it could.

All callsigns issued by a country must use the assigned initial characters, but the subsequent characters are chosen freely by that country, and assigned to permitted stations however that country wishes.

That's why there's so much variation in how countries handle regional and licence class differences.

The UK got G, M, and some things beginning with 2 when the alphabet got shared out and decided to use G, possibly a second letter, digit for amateurs, and all letter calls beginning with M for government stuff. As a 1-off special offer, M0RSE was issued for a limited period to an amateur group. The new novice licence uses the 2 series.

I've no idea who chose an allocation with such a memorable mnemonic for the US. T'wasn't me, I wasn't born then....

Cheers
david GM4ZNX

3026. Grounding and lightning protection--KE4ZV

Newsgroup: rec.radio.amateur.misc

Gary, you mentioned that a typical lightning strike has an energy
of about 20J. Is this really correct? I did a comparison to the energy
stored in a 50uF capacitor charged to 3kV (E=C*V**2), which is 450J,
and I was surprised that the charged cap stored almost 25 times
the energy of a typical lightning strike (not to say that a 50uF filter
cap in an amplifier is anything to sneeze at!). Have I miscalculated
something?

Mike N6MZ mikemr@microsoft.com

3027. qsl info

I worked 5B4ADA in the cw contest. I got his PO Box from
Dx Clusters but not his name. He's not in the 92 callbook.
Anyone know his name?
(Shees what a concept, you work a guy and all ya get is 599,
you don't even learn his name)

Shel Darack WA2UBK dara@physics.att.com

3028. Daily Summary of Solar Geophysical Activity for 16 March

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

16 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 16 MARCH, 1994

NOTE: Minor stratospheric warming is continuing over eastern Siberia, Alaska,
and the Canadian Arctic. Temperature gradient is reversed between 60N
and the pole in the middle and upper stratosphere from 30 HPA upwards.

NOTE: The Effective Sunspot Number for 15 MAR 94 was 36.5.
The Full Kp Indices for 15 MAR 94 are: 5o 6- 5+ 5o 5- 5- 4- 4-
The 3-Hr Ap Indices for 15 MAR 94 are: 45 63 59 48 43 39 23 21
Greater than 2 MeV Electron Fluence for 16 MAR is: 3.1E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. Regions 7688 (N19W06) and
7692 (N18E57) are the sole spot groups visible. Both have been
quiet.

Solar activity forecast: solar activity is expected to be
very low throughout the interval.

The geomagnetic field has been quiet to active at middle latitude sites. High latitudes experienced unsettled to active conditions. The greater than 2 MeV electron fluxes remained at levels comparable to those observed over the past week.

STD: Total daily electron fluence reached a maximum of 3.1E+09 electrons/cm^2-ster-day, surpassing the previous maximum of 2.4E+09 set on 12 March, about 3 days after this event began. Electrons today reach high to very high levels.

Geophysical activity forecast: the geomagnetic field is expected to be predominantly unsettled for the next three days. Episodes of active to minor storm conditions may occur during local nighttime hours.

Event probabilities 17 mar-19 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 17 mar-19 mar

A. Middle Latitudes
Active 30/25/15
Minor Storm 20/15/10
Major-Severe Storm 10/05/05

B. High Latitudes
Active 35/25/20
Minor Storm 25/20/15
Major-Severe Storm 10/05/05

HF propagation conditions improved over the last 24 hours, but were still somewhat degraded over the high and polar latitude paths. Most middle latitude paths are seeing near-normal conditions with sporadic night-sector instabilities. Periods of additional night-sector geomagnetic and auroral substorming should continue to produce occasional minor signal degradation from the middle to polar latitudes. Otherwise, gradual improvements should persist over the next 72 hours. Most regions should see near-normal propagation by about 18 March.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce

associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3031. QSL-Manager for JW1BJA/JW5VK

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-17 23:20:55 UTC
From: tomrune@mac_inge
Message-ID: <2maokn$pvn@ratatosk.uninett.no>
Source record: 269683

Hello everybody!
All is now ready for my little dx'pedition to Svalbard
Isl. We will go up there tomorrow, March 18, and we will
be there until Monday 21.
We will try to be as active as possible on all bands,
including WARC bands.
This is maybe the first time JW is activated on SSB on
the "new" WARC bands.

The QSL-MANAGER for both me (JW1BJA), and my father (JW5VK)
will be:

direct/bureau to LA5VK

73s and Good DX!

3032. Weekly Solar Terrestrial Forecast & Review for 18 March

SKYCOM Version 1.0
Ionospheric Signal Analyst

ONLY TWO WEEKS LEFT FOR THE SPECIAL LIMITED-TIME OFFER

MORE features to knaw on:

- Compute the Signal Quality between any two geographical locations, for
any date or time, and for any level of geomagnetic activity.
- Generate Broadcast Coverage Signal Quality Maps for any time of day or
level of activity.
- Generate Broadcast Coverage Multipath Range Maps showing regions of
high or low signal multipathing.
- Produce Global Maps of Critical F2-layer frequencies for any date and
time or level of geomagnetic activity.
- Using a Mouse, play with various signal paths and determine what paths
cross into the auroral zones, enter regions of sporadic-E, or cross the
sunrise/sunset terminator or grayline for any date/time, or level of
geomagnetic activity.

MUCH MORE . . . By far, one of the most elaborate propagation packages
available for amateurs and professionals.

For more information, contact "Oler@Rho.Uleth.CA", or
"COler@Solar.Stanford.Edu". Pricing information can be obtained from the
e-mail address above, by writing to us through postal mail, or by calling
the recorded message at: 403-756-2386 (approx. 3 min). A special offer
applies until 31 March 1994.

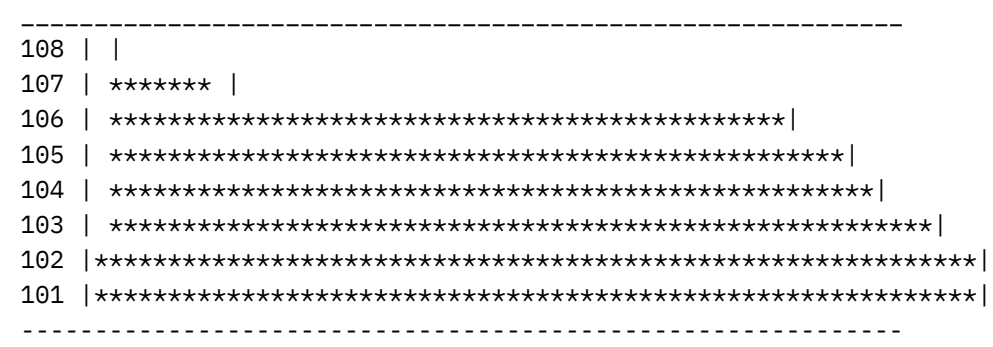
GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX



NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS

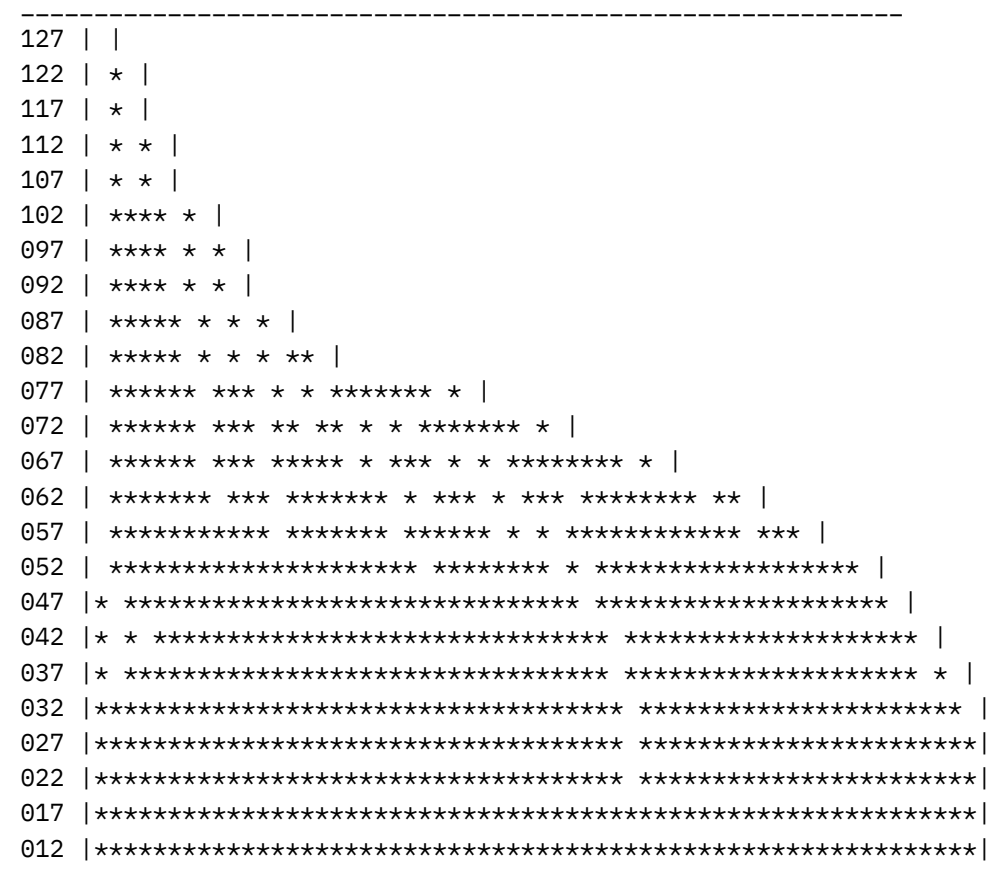


Chart Start: Day #016

NOTES:
The graphical chart of sunspot numbers is created from the
daily sunspot number counts as reported by the SESC.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

17 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 17 MARCH, 1994

SESC NOTICE: Planning for future solar optical and solar radio
observations is in progress. Consideration is being given to having
no regular solar activity patrol in the optical and radio wavelengths.
There is also a possibility of no synoptic images. Can you describe
to us any critical impacts such actions would have on your operations
or research? Please reply to SESC no later than 23 March 1994.
Contact by phone (303) 497-5127 or FAX (303) 497-7392

NOTE: The Effective Sunspot Number for 16 MAR 94 was 30.0.
The Full Kp Indices for 16 MAR 94 are: 4o 3+ 4- 3- 3+ 4- 3- 3o
The 3-Hr Ap Indices for 16 MAR 94 are: 30 17 21 12 18 24 13 15
Greater than 2 MeV Electron Fluence for 17 MAR is: 1.6E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. There are but two simple
active regions visible, 7688 (N19W20) and 7692 (N19E45).

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at unsettled to minor storm
levels with substorms persisting during nighttime. The greater
than 2 MeV electron flux remains elevated, in excess of 5.0E+04
at various times during the interval.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to active early, then calm to mostly
unsettled levels by the end of the period. Episodes of minor
storming may occur during local nighttimes.

Event probabilities 18 mar-20 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 18 mar-20 mar

A. Middle Latitudes
Active 30/25/15
Minor Storm 20/15/10
Major-Severe Storm 10/05/05

B. High Latitudes
Active 35/35/25
Minor Storm 20/20/15
Major-Severe Storm 10/10/05

HF propagation conditions continue to very slowly improve
over all regions, but are still mostly below normal for the
polar and high latitude paths. Middle latitude paths are
returning to normal and should be near-normal on 18 or 19
March. Near-normal propagation conditions are expected over
all regions by about 19 March (or 20 March for higher latitude
transauroral and/or transpolar paths).

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
16 Mar: 0722 0722 0729 SF 7688 N16E01 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep

Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Date: 1994-03-18 04:26:57 UTC
From: oler@rho.uleth.ca
Message-ID: <9403180427.AA04542@rho.uleth.ca>
Source record: 269688
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

POTENTIAL SATELLITE ANOMALY WARNING

UPDATED: 03:50 UT, 18 MARCH

/\

ATTENTION:

Energetic electrons at greater than 2 MeV continue to be elevated.
Highest fluence levels for this event were observed yesterday (16 March) at
3.1E+09 electrons/cm^2-ster-day. Electron densities dropped somewhat to
moderate to occasionally high levels today.

This event is expected to begin decaying back toward background levels
and finally end over the next 24 to 72 hours.

** End of Warning **

3037. QRZ CDROM Update Information

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-18 04:42:30 UTC
From: flloyd@pinyon.libre.com
Message-ID: <2mbbfm$4ee@pinyon.libre.com>
Source record: 269689

----Subject: QRZ CDROM Update
----From: Fred Lloyd, AA7BQ

I am currently in the process of gathering data for the third edition of the QRZ! Ham Radio CDROM and am actively looking for data and shareware submissions for it.

Some of the new features of the May edition will be: Native OS/2 support, native AIX support, and if I get time, some user callable Windows .DLL's to access the database.

The May edition will for the first time include the callsign database for Italy and Great Britian, and the Canadian listings are being updated. A fresh copy of the US Callsign database will also be included which we can expect to contain approximately 650,000 callsigns.

I'm especially interested in aquiring more International callsigns and will offer anyone a year's subscription to QRZ! in exchange for any countries that I do not yet have (which is most of them). I reserve the right to limit this offer to the first submitter of a given country, and to require that at least 1000 callsigns, total or aggregate if multiple countries, be submitted. If your country has less than 1000 callsigns, but is important, then send it to me anyway as I'll review them on a case by case basis.

In addition, any ham software or shareware authors are invited to submit their programs for inclusion on the CD - at no charge. QRZ is a great publicity vehicle for your product, or your club or ham related organization.

And finally, SEND ME YOUR CLUB CALLSIGN LISTINGS! If you're a member of a radio club which has its own callsign, please send me the following information so that I can place it into the database:

Callsign, Name, Address, License Class, Issue Date, Expiration Date

There is no charge for submitting these listings. We would get them from the FCC but they don't seem to keep them on their computer.

P.S. Please don't send me any data taken from the Buckmaster CDROM.

If you have questions or need more info contact:

flloyd@qrz.com

For an automatic e-mail reply about the QRZ! CDROM send a blank message to:

info@qrz.com

Thanks,

-fred

^^^^^^^^^^^^^^^^^^^^^^

I just wanted to make a comment on WWW here. I've been using Internet stuff for about 4 years, but last week a guy gave me a program called Mosaic that is a software interface to World Wide Web. All I can say is: WOW!! WWW allows a point and click interface to the Internet. Instead of cryptic unix commands you can see everything and click the mouse on what you want. You can click on a line and have a high resolution movie play on your computer with sound! You can navigate FTP like Program Manger in Windows. I clicked on a few lines and was reading the Dead Sea Scrolls which had pictures of the original manuscripts. It is amazing! All I'm saying here is that if you can get WWW access, get it. It is a full multimedia superhighway - who needs Al Gore!

Now we return to your regularly scheduled scanner discussions...

Ty:

How you doing.....I have a Heath HW-2036a and its manual,although
I am not willing to part with the manual,I may be talked into copying
parts of the manual,I assume that the radio is already put together
so he probably won't neet the assembly instructions,so if he thinks
I can help,just let me know,you can respond to me via freenet, the
address is KA4HPB@Freenet.SCRI.FSU.EDU.............see ya.........

```
This is a periodic reminder that the Boston Amateur Radio Club maintains an
FTP area on oak.oakland.edu (141.210.10.117) in /pub/hamradio.

Oakland is available via the following methods:

On most systems, the command needed is: ftp oak.oakland.edu
or: ftp 141.210.10.117
For Gopher: gopher gopher.oakland.edu 70
World Wide Web URL: http://www.acs.oakland.edu

Please feel free to browse through the area.

If anyone has any questions about it, please do not hesitate to e-mail
either of the co-moderators listed below.

Also, up-to-date copies of the files on the ARRL's information server
(info@arrl.org) are available in the directory /pub/hamradio/ARRL/Server-files

Source code for programs is always welcome. It can permit people to use
those programs on other computers with other operating systems.

3041. Lightning protection ...

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-18 11:33:32 UTC
From: Gary_Thorburn@UB.COM
Message-ID: <9403181859.AA0113@smtp.UB.com>
Source record: 269691

I've been following Gary Coffman's recent exchange about lightning.

I understand that small radii (sharp points) discharge at lower voltages.
Therefore,
if an instant in time occurs when a surface has an even and high potential, then
certainly the sharp point will be preferentially hit.

However, part of lightning rod theory as I understand it, is that lightning
will be LESS LIKELY to strike when properly installed lightning rods are
present.
This is precisely because the sharp points begin to discharge the surrounding
area
at relatively low voltages, making it less likely that the potential difference
required for a mondo-strike will ever build up.

I think this is the principal behind the multiple tiny sharp rods located along
a braid across the ridge of a barn or home.

Conjectures? Refutations? Anyone up for an experiment? ;-)

SB DX @ WW $RTDX0318
VK2SG RTTY DX Notes, 18 March
VK2SG RTTY DX Notes for week ending 18 March 1994 (BID RTDX0318)

Looking for new countries in RTTY? Well here is your chance to snag
'em. BARTG Spring RTTY Contest, sponsored by the British Amateur
Radio Teledata Group (BARTG) starts 19 March at 0200Z and ends 20
March at 0200Z. Exchange RST, serial number and UTC. For details,
QST and RTTY Digital Journal, February 1994.

Our information this week came from 9X5LJ, DJ3IW and the Central-
Europe DX Cluster Node DB0SPC, I5FLN, IK5AAX and the IK5PWJ Packet
Cluster, N2DBI, W2JGR and the NJ0M node of the Twin-Cities DX Packet
Cluster, W5KSI and ZS5S. Thank you all for your assistance.

Notes of Interest.

Nauru, C21. C21/MI and C21/YI are the callsigns issued to JF2MBF,
Mitsunobu Ichino and JI1NJC, Yasunori Iitsuka for their operation.
C21 with the portable designator consisting of their initials.
QSL JR2KDN.

Spratly Islands, 9M0. the next operation from Spratly Is scheduled
for sometime around April 2. Callsigns will be 9M0A, 9M0AG and 9M0BZ,
to be active on RTTY, AMTOR, Pactor and Packet. Look for them on RTTY
frequencies, 7030, 14085, 21085 and 28085.

DXAC Proposed March Schedule. DXAC Chairman W4VQ, Robert Beatty, announced a proposed vote. One of the topics is the deletion of Mount Athos. More on this later.

For next week's Bulletin, send your Bandpass and Notes of Interest to Jules, W2JGR @ W2TKU.#SRQ.FL.USA.NA

Remember, DX Don't Sleep.

SB DX ARL ARLD015
ARLD015 DX news

The items in this week's bulletin are courtesy of Jacques, F2YS/W2, Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral in QST. Thanks.

SPRATLY ISLANDS. The next operation is slated for April 2 to 5 by operators 9M6BZ, JA9AG, JQ1WSL, JS1QHO and G3NOM from Swallow Reef. Listen for 9M0A, 9M0AG and 9M0BZ on CW, SSB, FM, RTTY, AMTOR, PacTOR and packet. On CW try 1825, 3505, 7005, 10105, 14005, 18070, 21005, 24895 and 28005 kHz. On SSB try 3790, 7080, 14195, 18145, 21295, 24945 and 28495 kHz. FM will be on 29240 kHz. RTTY will be around 7030, 14085, 21085 and 28085 kHz.

SVALBARD ISLANDS. From March 18 through 21, Tom, LA1BJA, and Inge, LA5VK, will be signing JW1BJA and JW5VK, respectively. They will operate all bands, including WARC, mostly with SSB. Phone operation on 17 and 12 meters was authorized for Norwegian amateurs on January 1, 1994, so this may be the first JW voice activity on these bands. QSL to JW5VK, Inge Johan Lauknes, Oldersneia 10, N-9100 Kvaloysletta, Norway.

TRINDADE ISLAND. Mendonca, PY1UP, will be starting a four month visit in about three or four weeks. He now has a higher class license enabling him to operate on more bands. Listen for PY0TUP.

FERNANDO DE NORONHA ISLAND. Peter, PY5CC, will be active until April 1st, as PY0FM. He will be active on 160-2 meters, including WARC bands and on CW/SSB. Try 160 meters around 0415z, 80 meters around 0245z, and 40 meters around 2100z. He has also been heard on 30 meters, a rarity for a Brazilian station. QSL via PY5CC.

SOUTHERN SUDAN. John, PA3CXC, is signing /ST0, though his length of stay is unknown. Listen for him on 18072 kHz at 1745z and 24892 kHz

at 1830z.

COCOS ISLAND. TI2CF and TI2JJP have been very active as TI9CF and TI9JJP. Carlos operates both phone and CW. Jose prefers SSB. Try 1833 kHz at 0500z, 3795 at 0412, 7007 at 0415, 7052 at 0235, 10104 at 0130, 14024 at 0230, 14195 at 1725, 18145 at 0100, 21025 at 1712, 21295 at 1838, 28025 at 1905, and 28495 at 1916. QSL via TI2CF and TI2AOC respectively.

LORD HOWE ISLANDS. VK9LA has been on a net on 7084 kHz at around 1145z.

NORTHERN MARIANA ISLANDS. Tosy, JA5VZB will sign AH0T from Rota Island sometime this month. Activity will include a stint in the CQ WW WPX SSB contest. Outside the contest hours he will be on 160 through 10 meters, concentrating on 160 meters and RTTY. Check 1824 kHz. All non-JA stations QSL via JA6BSM, JAs via the bureau only.

JUAN DE NOVA. Listen for FR5ZQ/J between March 21 and April 25 operating SSB only. QSL his home call.

EUROPA. FR5ZU/E will be on from March 28 to April 25 with SSB and RTTY. QSL via VE2NW.

THAILAND/NEPAL. Rana, WB4NFO, will be on the air soon signing HS0ZBK. A trip to Nepal is planned and an effort will be made to obtain a license there.

JOHNSTON ISLAND. AH6IO will sign /KH3 May 4 to 9 with NH6UY. Operations will be 160 through 6 meters and satellites. QSL direct only to home calls.

UNITED ARAB EMIRATES, UAE. Don, WB2DND, will sign A61AD March 23 to 26, concentrating on the lower bands. QSL via WB2DND.

THIS WEEKEND ON THE RADIO. BARTG Spring RTTY Contest, sponsored by the British Amateur Radio Teledata Group, is from 0200z March 19 to 0200z March 20. Exchange signal report, serial number and UTC time.

Bermuda Contest, sponsored by the Radio Society of Bermuda, runs from 0000z March 19 to 2400z March 20. Work as many VP9 stations as possible exchanging signal report and serial number.

For more information on both events, check page 111 of February QST.

>making contact.

Jeff has a point about exotic contact methods. Certainly the QSO content of an EME contact is rather thin, but it's the fact of the contact itself that's the primary goal. A few milliwatts on HF isn't quite so exotic, its worked rather well for many years when the ionosphere cooperates, but it's still more of a challenge than making the same contact with 100 watts. However, the bulk of contacts made on HF, or VHF/UHF, aren't attempts to press the limits of propagation. It's that majority of contacts that we lament as contentless. There's little challenge to making the contact when both sides are running substantial power over well established paths (or certainly when through a repeater). The emphasis isn't on making the contact, that's trivial, the emphasis has to be on the content since that's the only novel aspect of the exchange.

What latitudes are in each of the LOW/MIDDLE/HIGH bands. Specifically,
int the UK, are we high or middle ?

David.

pull them from the ARRL server (this is only one place) they will get mailed to you. send mail to: info@arrl.org. Your message (text body of the message) should only include:

send q-signals
quit

Another way it to anonymous ftp them from one of the loactions out there that has the ham files.

>Ditto for the noise blanker on my TenTec OMNI VI.

I once found that the noise blanker on my Omni V actually worked on
some kind of impulsive noise. But it so rarely does anything useful
that I never bothered to figure out just when it does work and for
ages now, I have abandoned even trying it.

Ten-Tec can probably save us all a few bucks and not include their
noise blanker wannabe :-). That, and the zillions of birdies are
the weak spots of the Omni V.

Otherwise, Ten-Tec rigs are WONDERFUL.

In the book which accompanied a PBS special on Armstrong, Sarnoff and
DeForest, the term LID is described as originating withe the marking
L.I.D. (later in day) marked on low priority telegrams, which were
given
to poorer operators, while the urgent messaes were given to the good
opreators.

Hello Dave,

I'm not sure whether this is the first wireless telephone. I've got a copy
of the 10th ed. World Radio Handbook (1957) which was the predecessor of the
WRTH, in which Storno have an ad for a radiophone if I remember correctly.

Admittedly it's the size of a large suitcase with about a 4-foot whip, and
the guy carrying it (in trenchcoat and trilby) looks like the main actor in
a bad spy movie, but if I read it correctly, and it connects to the PSTN rather
than just a 2-way portable (haulable ? :-)), this would pre-date the above
claim by 22 years ! I'll check it out over the weekend ..

The same edition has the latest in VCR technology. This domestic wonder was
reel-to-reel, and looks to about the same size as a small automobile !

Source record: 269708

Hello.

I'm no where near home so I don't want to read through everything here to
see if this is a dumb question, so I'll just assume that it is (I don't
normally read this group either).

I'm not a ham (yet) but there is one in the Philippines that is looking
for crystals for an old transceiver (I don't don't know the make/model).
He needs crystals for the following frequencies

15620 KHz
15610
15970
15870

A mail order source would be real nice since that would then give everyone
in the Western Pacific a catalog to drool over. :-)

Thanks!
Bob

MEDIUM WAVE CIRCLE * MEDIUM WAVE CIRCLE *** MEDIUM WAVE CIRCLE ***

137A Hampton Road, Southport PR8 5DY, England

Dear Radio Enthusiast,

We would like to take this opportunity to introduce you to the only UK-based club specially for the radio enthusiast interested in Medium Wave and Long Wave radio.

HISTORY:
The Medium Wave Circle was founded in 1955 by Ken Brownless who ran affairs single handledly from his home in York until his death in 1984. Since 1984 the Circle has been run by an organising committee consisting of an Honorary President, Secretary, Treasurer and the General Editor of the club journal, Medium Wave News.

MEDIUM WAVE NEWS:
The prime activity of the Circle has been the publication of Medium Wave News. This started life as a single stencilled page appearing in December 1954 and grew to eight mimeographed pages by the 1970s. Over the past few years we have continued to improve and expand Medium Wave News. In 1987 we changed from the traditional loose leaf broadsheet style to a 16 page A5 size booklet. This doubled the amount

of information we could carry in each issue. In the following years we increased the number of issues from 8 per year, through 9 to the present level of 10 copies each year. In parallel, the size of the magazine increased from 16 to 20 pages per issue. Now we regularly produce 24 pages per issue which represents a full three fold increase of magazine contents since 1987! In 1993 the contents of Medium Wave News increased by 10% and we are planning a similar further expansion in 1994.So that you can appreciate the scope of Medium Wave News, the 1992-3 Annual Index is attached.

OTHER ACTIVITIES:
Although the prime activity of the club is still producing Medium Wave

News regularly for members in the UK and overseas, the club continues to develop its activities on several fronts. The club maintains a portfolio of Reprint Publications for the benefit of members. This year we are manning a stand at the Leicester Amateur Radio Show to promote the hobby of medium wave listening and DXing more widely. Members also stage regular DX-peditions in the search for new and elusive stations.

MEMBERSHIP:
Membership of the Circle is open to anyone with an interest in LW/MW radio, whether it be radio listening, technical development or enthusiastic DXing. Indeed we cover the ground between 100kHz and 1700kHz. Although we are a specialist radio club we welcome all listeners; neither age nor experience (or lack of it) are a barrier to

membership. In fact despite being UK-based, we always welcome our overseas friends.

JOINING:
The club works with a membership renewal system based on an April renewal for all members. If you join part way through the year membership fees are charged pro-rata unless you would like to receive back issues of Medium Wave News to the preceeding April. If you wish to join please carefully complete and return (by post) the attached form. If on the otherhand you would like to see a sample copy of Medium Wave News before joining please send the form with either 4 International Reply Coupons or US$3 bills (or equivalent in any major currency).

I trust you'll feel inclined to join the Medium Wave Circle. I look forward to hearing from you and I shall personally see that your name is immediately added to the members' register.

73s and good listening,

Steve Whitt
on behalf of the Medium Wave Circle

----------please cut and return completed form----
|
| To: Medium Wave Circle,
| I would like to subscribe to Medium Wave News as indicated
| below (please tick your choice):
|
| UK 2 years GBP21 ****save 10% now!****
| UK 1 year GBP12
| Europe (inc Eire) 1 year GBP15 (US$25, 35DM, 150FF)
| The Americas 1 year GBP18 (US$28 or equivalent)
| Rest of World 1 year GBP20 (US$30 or equivalent)
| One year membership expires in March 1995;
| Two year membership expires in March 1996
|
|
| Your Name:_____
|
| Your Address:_____
|
| Town/ City:_____
|
| Post (Zip) Code:_____ Country:_____

Please return this form with payment to Medium Wave Circle, 43 Atwood Drive, Bristol BS11 0SR, England. On joining the club you will receive

a membership number which will appear on the address label of Medium Wave News. It helps us if you use this number in all communications with the club. You will also receive a welcome pack containing some useful publications that we are sure you will appreciate.
All payments should be made to "Medium Wave Circle". In the UK a cheque or PO is preferred. All overseas non-cash payments (eg bank draft, International Postal Money Order, Eurocheque) must be in GBP Sterling. Cash payments can be in any major negotiable currency such as US $, German DM, French FF (but send no coins through the post). We

recommend using registered post for cash sent via the post. If you cannot transfer money we will accept International Reply Coupons at a rate of 2.5 per # (e.g. 25IRCS = #10)

For office use Date received: Member No: Payment method:

SB NEWS @ AMSAT $SPC0321
* SpaceNews 21-Mar-94 *

BID: $SPC0321

=========
SpaceNews
=========

MONDAY MARCH 21, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* SAREX FACT SHEET - STS-59 *
============================
WHO: Space Shuttle Endeavour crew

WHAT: Talk via Amateur Radio with students on earth.

WHERE: Earth Orbit. 57 degrees inclination. Altitude 220 kilometers.

WHEN: April 7, 1994 (9 day mission)

WHY: As part of the Shuttle Amateur Radio EXperiment (SAREX) component of the STS-59 mission.

LAUNCH: Scheduled for April 7, 1994 at 1207 UTC from the Kennedy Space Center, Cape Canaveral, Florida.

AMATEUR RADIO
LICENSED CREW
MEMBERS: Dr. Jay Apt, N5QWL, Mission Specialist
Dr. Linda Godwin, N5RAX, Payload Commander

PAYLOAD: Primary Payload--Shuttle Radar Laboratory 1 (SRL-1). Apt is the commander of the Blue Shift and will operate the shuttle systems during the "night" shift, while Godwin is responsible for overall operation of three large radars in the shuttle's cargo bay during the "day" shift.

Secondary Payload--Shuttle Amateur Radio EXperiment or SAREX, configuration C.

SPONSORS: The American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

SAREX RADIO
FREQUENCIES:Voice Downlink: (Worldwide) 145.55 MHz [Receive Only]
Voice Uplink: 144.91, 144.93, 144.95, 144.97,
144.99 MHz
Voice Uplink: (Europe only) 144.70, 144.75,
144.80 MHz
Packet Downlink: 145.55 MHz
Packet Uplink: 144.49 MHz

HAM RADIO FM Voice: call signs N5RAX and N5QWL
CALL SIGNS: FM Packet: call sign W5RRR-1

QSL VIA: Send reports and QSLs to ARRL EAD, STS-59 QSL, 225 Main Street, Newington, CT 06111, USA. Include the following information in your QSL or report: STS-59, date, time in UTC, frequency and mode (FM voice or packet). In addition, you must also include an SASE using a large, business-sized envelope if you wish to receive a card. The Orange Park Amateur Radio Club in Florida has generously volunteered to manage the cards for this mission.

INFORMATION:Goddard Amateur Radio Club (Greenbelt, MD) Amateur Radio station (call sign WA3NAN) news and retransmissions on Amateur Radio high frequency (HF) bands at 3.86, 7.185, 14.295, 21.395, and 28.65 megahertz (MHz) and on very high frequency (VHF) bands at 147.45 MHz.

Johnson Space Center Amateur Radio Club (Houston, TX) Amateur Radio station (call sign W5RRR) news bulletins on HF bands at 3.850, 7.227, 14.280, 21.350, and 28.400 MHz and VHF at 146.64 MHz.

ARRL (Newington, CT) Amateur Radio station (call sign W1AW) news bulletins (9:45 PM, 12:45 AM EST) on HF bands at 3.99, 7.29, 14.29, 18.16, 21.39, 28.59 and VHF at 147.555 MHz.

SHUTTLE
TRACKING: Current Keplerian elements to track the Shuttle are available from the NASA Spacelink computer information system BBS (205) 895-0028 and the ARRL BBS (203) 666-0578.

FOR FURTHER
INFORMATION:Tracy Bedlack, N1QDO, Educational Activities Department, American Radio Relay League 203-666-1541 email: ead@arrl.org

SAREX configuration C consists of the handheld transceiver, I/F module, PGSC, spare battery set, window antenna, packet module, SAREX headset assembly, personal recorder, and the required cable assemblies. The packet] module contains a power supply and packet TNC. The power supply provides power for the TNC and the handheld transceiver. The TNC interconnects with a radio transceiver so that data to and from the computer is transmitted to and received from other amateur radio stations.

Configuration C is capable of operating in either the voice or data mode in communications with amateur stations within LOS of the Orbiter. This

configuration can be operated in the attended mode for voice communication
and either the attended or automatic mode for data communications.

The payload control weights are as follows:
Configuration C 45 lb (20.41 kg)

3061. Is there any patch for HTX-202?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-18 18:33:53 UTC
From: lazarza@academ01.mty.itesm.mx
Message-ID: <lazarza.764015633@mtecv2>
Source record: 269712

I wonder if this is the right place to post this question.

Is there any patch available to expand the frequency range of the HTX-202?

If possible, replay to me directly, and if there is interest, i'll post the answers.

Thanks in advance

Luis Zarza

I remember seeing an article on constructing an
eggbeater style sat antenna on ..... in an issue of QST.

have torn the shack apart and no DICE!!!

anyone with a reference or an alt. source for an eggbeater sdesign?
i would be very interested.

thanks

Thanks for typing that in and posting, Dave. I found a couple of typos,
though:

Dave Bushong (dbushong@wang.com) wrote:

: Here is the 1994 contest calendar from CQ. Each of the fields is

: Contest Weekend/Month Hours
: ARRL VHF Sweepstakes 33
Should be: 4/Jan

: ARRL DX Contest 4/May 14
That should read: ARAL DX contest. (though I'm not sure who the ARAL
is, they gotta be crazy to hold a DX contest the same weekend as the WPX
CW!)

: CO WW WPX CW Contest last/May 48
Of course thats C*Q* not CO.

3064. Mounting Cushcraft R7 Vertical on Towers

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-18 19:30:29 UTC
From: CUNNINGHAM_A@whqvax.picker.com
Message-ID: <1994Mar18.193029.6834@picker.com>
Source record: 269714

SUMMARY : Comments on R7 on Towers

A few weeks ago Trevor Hilfer, WD8QBP, and myself asked if it was
advisable to mount the Cushcraft R7 vertical at the top of a tower.
We also were curious about the resulting DX performance. Nick, W8XD, advised
against tower mounting, as his R7 bent somewhat in our high Cleveland winds.
This is a summary of the (mixed opinion) comments received over the reflectors.

Al Cunningham N8AGU

++

From: Rick_Aldom-AYKA60@email.sps.mot.com

Hi,
Our club has a R7 mounted atop a 30' or so mast. The mast is a three section
with guys North, South, West and East Northeast. Each compass point goes to
the top and to the top of the second section. Just after we put it up we had a
front come through, and the R7 really leaned over. The mast took it OK, but
the R7 looked like we were going to find wadded up in a heap the next day.
However, the R7 did just fine, and so did the mast. We have been very happy
with the setup.

One more note...

Our club, MARCA (Motorola Amateur Radio Club of Arizona) set the mast for our
antenna on the top of our plant in Tempe. The roof is about 25'-30' up and
then we are another 30' from there. The mast and antenna see a fair amount of
un-disturbed wind up there and it takes it just fine.

I hope this information is of some use.

Rick Aldom
++

Skip it. Cushcraft recommends mounting the R4/R5/R7 between 5 and 10
feet off the ground.

Hi Al....a good friend of mine in Alabama, Eric/ WB4QNP, put an R7 at the top of his 110 ft 45G tower. The R7 is a pretty resilient antenna, except for the 30 meter coil, and Eric said it withstood some bad winds. I just re-installed this same antenna for a friend here in Greenville, SC, and can attest that I would have no concerns putting it on top of a tower. Matter of fact, Eric said it worked quite well on top of the tower...but of course it was mounted at 125 ft (110 ft of tower plus 15 ft mast extending out the top). 73 and gl!

From: levine@mc.com (Bob Levine)

I have had an R7 mounted on my chimney (a 3 flue job) with 3 custom stainless steel brackets I made for > 2 years now. It withstood 80mph winds last March while caked with ice. I have seen it bent at least 30 degrees from vertical. It is still as vertical (with no wind) now as it was when I installed it. It still works the same and I will never sell it, even though I have since constructed a tower. Although I have a G5RV, I still prefer it for WARC and 40m DX.

If anyone is considering buying one (R7) and wants to see it's SWR curves, send me a SASE and I'll send you the printout from my AEA HF SWR Analyzer. (I built the interface to the PC for that great thing!)

It wasn't designed for 80m either. R7 := 7 bands (10,12,15,17,20,30,40)

++

From: SMTP%"XMSJ29A@prodigy.com" 28-FEB-1994 11:44:14.32

The refelctor is great for sharing ideas...especially when someone else has
exactly the same question as you do!

After the ARRL CW weekend W1CW and I were discussing moving the R7 to the
top of the big tower, coincidence-I think not.

We currently have it up about 35 feet and it works OK...wondering if
putting it up at 135 would make it "hot"....

I too have wondered about wind load, etc...fortunately the tower is very HD
Rohn 55 and I think we could put a pickup truck up there with no problem...
but, I would like to hear what you get in the way of feedback. Seems like with
it it so "in the clear" it should perform without hinderance...mebbe there's
a down side. If you do not post your feedback to the general cq-contest
public please lemme know what you hear. Thanks.

HELP...

Any Extra Class hams out there who can help me complete some endorsements for the 75M WAS (aka GERATOL) net? Out of over two dozen various endorsements available, I have whittled my list down to only a state or two for certain ones; that is, if I can work stations having the call sign formats following for the states listed, I can finish off these endorsements. The call sign formats and states needed are:

Callsign #
Format Example Needed States

N 1x2 N2KK (2) AR, WV

A 2x1 AB3C (2) HI, ND

K 2x1 KC8X (1) WV

W 2x1 WA4X (3) AL, ID, UT

If any of you Extras out there having a call sign with the above format and state can schedule a quick contact with me (shouldn't take any more then a minute or so) in the 75M Extra Subband before it gets too noisy, pls send an email reply direct to me, and we'll work something out. Thanks in advance to anyone out there who can help me out!

>Please help, Maybe I can also prove to him that the Internet is worth more

I have heard somewhere that this is the proper origin. There was a magazine published named Home Amateur Mechanic, in this magazine an artice was posted on how to build an amateur radio. It was one of the first plans that was publically published. Therefore, as you can see, the nickname of this radio became a HAM radio. This may not be accurate since it just came through the grape vine, but that is where everything in this hobby comes from.

Hope I Helped,

3069. Packet, Internet & the FCC

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-18 22:16:00 UTC
From: jrimmer@netcom.com
Message-ID: <netnewsCMvvLn.964@netcom.com>
Source record: 269532

I've been seeing snippets of messages here and there about the Amateur rules and Packet, but've been unable to gleen a straight answer. What are the current rules for message forwarding? i.e. I want to set my computer up to recieve Internet mail, and then forward it over packet, is this kosher? According to a year old FAQ, it is as long as you "hand" forward the messages. I really don't want to do that... Furthermore, the FAQ specifies that the FCC sees Internet mail as third-party traffic, therefore must be screened by the control-op.
Do these rules still apply? Or has Internet Mail forwarding been given a blessing by the FCC? What's up?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z MARCH 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 MARCH AND FORECAST UP TO 21 MARCH

IPS Warning 09 was issued on 18 MAR and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 087/030

1B. SOLAR FORECAST
19 March 20 March 21 March
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 090/034

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth : unsettled to active

Estimated Indices : A K Observed A Index 17 March
Learmonth 19 3333 4434
Fredericksburg 18 25
Planetary 20 32

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Mar 15 Unsettled.
20 Mar 35 Active to minor storm.
21 Mar 25 Active.

2C. MAGNETIC COMMENT
Expected activity is due to a recurring coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Mar normal fair-normal fair-normal

PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Mar normal fair-normal fair-normal
20 Mar normal normal normal
21 Mar normal normal-fair fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were depressed 15-30% until 12UT and near normal
thereafter. Spread F conditions were observed during local night.

Observed T index for 18 March: -6

Predicted Monthly T Index for March is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
19 Mar 20 About 15% below predicted monthly values.
20 Mar 30 Near predicted monthly values.
21 Mar -10 20 to 30% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

: It all seemed so easy, there was so much open space up there for an
: antenna. I went out and bought an NMO mount and a 2-meter quarter-wave
: whip. Now I realize that I can't figure out how to get the headliner out to
: drill the hole.

You might check with the dealer, or even a cell phone installer for
tips, but I would suggest a nice diamond or comet gutter mount with
one of these ground independent gain antennas. I have had great luck
on my 93 Caravan using this same set-up. I hit all the repeaters that
I need to, plus great simplex range, and no holes in the roof!

To enable the extended receive on the DJ180, you'll have to reset the rig
in the process. Turn the rig off; hold the Func button and the Lamp button
down while turning the rig back on. Then reprogram all your memories.

How to Use the WB7TPY
Packet <-> Internet Gateway

First, some brief operational notes:

(1) Messages must not contain any foul language, or commercial purpose.
(2) Messages can only be sent to countries that the United States has
a third-party agreement. All others will be destroyed.
(3) Messages from the internet should be less then 5K in length.
No files should be sent.
(4) If you have questions, please do not hesitate to contact me either on
packet radio: WB7TPY@WB7TPY.AZ.USA.NA -or-
Internet : david@stat.com

(5) Have fun. Use the gateway as much as you like. That is what it is
there for.

From Internet to Packet

Send mail to the internet address of:

gate@wb7tpy.ampr.org

The first line of text must contain a full packet address, preceded with the
word "Packet:"

For example, mail to my packet address, would have the first line of text;

Packet: wb7tpy@wb7tpy.az.usa.na

** NOTE: this line MUST be left justified.

From Packet to Internet

Send as private mail (never a bulletin) to the packet address of:

gate@wb7tpy.az.usa.na

The first line of text must contain a full domained internet address,
proceeded with the word "Internet:"

For example, mail to my internet address, would have the first line of text;

Internet: david@stat.com

Editor, HICNet Medical Newsletter
Internet: david@stat.com FAX: +1 (602) 451-1165
Bitnet : ATW1H@ASUACAD

3074. Can you help me with this QRM question?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-19 05:04:11 UTC
From: auchd@acad2.alaska.edu
Message-ID: <1994Mar19.010411.1@acad2.alaska.edu>
Source record: 269722

I have had some problems with interference at my station for the past several years are so. Here are some characteristics of the interference:

The interference occurs slightly after sunset
The interference appears as hash up and down the spectrum from 1 to 30 mhz, although it is most intense in the 3.5 to 9.0 mhz range. It seems to follow a sporadic pattern, increasing in intensity for several seconds, followed by no interference. Then after a minute or two, the noise comes on again building in intensity until the next intermission.

Now, let me tell you what I've tried to do to get rid of it:

I've grounded the rig
I've tried ferrite cores on the power supply line and antenna lines
I've tried an AC line filter
I've tried operating the rig on D.C. power and still pick up the interference
With a dummy load on, I can still pick up the interference although it is less pronounced than on my dipole or vertical.
I've tried switching the main power supply off in my house to check if the source was in the house, the noise continued.

So, I went hunting in the backyard with a pocket radio. I traced the hash to the underground power transformer. I called the power company, they came out and looked at it, but I still had the problem. I then took the transformer out into the streets and traced it to the helium gas streetlights. It seemed to be most pronounced from two lights where the bulb pops off and then comes back on, But interestingly, this hash seems to be radiating into the powerlines in the neighborhood.

Has anyone had similar experience with this type of interference in their neighborhood? Any suggestions for how to deal with this "agonizing" interference would be greatly appreciated. It sure is difficult to deal with when your trying to get a positive ID!!

SYNOPSIS OF ACTIVITY

Solar activity was very low. Little of significance was
reported. A new spot group may be forming near N15W10.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to minor storm
levels over the past 24 hours. Nighttime substorming
continues, as does the prolonged greater than 2 MeV electron
enhancement.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled. Nighttime substorms should
persist for the next few days.

Event probabilities 19 mar-21 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 mar-21 mar

A. Middle Latitudes
Active 25/25/15
Minor Storm 15/15/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 40/25/25
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were improving to near-normal
over most regions today, including the polar and high latitude
regions. Near-normal propagation is expected over the next
three days at least, with only occasional minor signal
degradation for night-sector high-latitude transauroral paths.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event

Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3079. Information about Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-19 12:10:43 UTC
From: jrimmer@netcom.com
Message-ID: <jrimmer.1.0631570C@netcom.com>
Source record: 269727

I've searched a few FTP sites, but've been unable to find any information about the hardware, setup, etc. of repeaters. I asked an individual here who runs a local repeater group about such things, and he dodged the subject. I'm assuming this is because he operates a local "closed" repeater group and doesn't want any competition. Oh well...
Any information would be appreciated...

3080. DARA Hamfest CQ WPX Multi/Single Class station Impromptumeeting

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-19 14:39:43 UTC
From: apontej@dmapub.dma.org
Message-ID: <CMx229.A12@dmapub.dma.org>
Source record: 269528

Disclaimer Notice: This impromtu meeting is being set up by me KP4UY.
DARA and/or Hamfest are not sponsoring it, & it would probably be held
somewhere else I can get a room at no cost for it that fits the amount
of people that express an interest onthe subject. At present such a station
as described here doesnot exist to the best of my knowledge anyone who
knows of one please msg me.

My name is Jose Prieto Aponte (KP4UY), I will be working in the Forums/Speaker
Commitee which has a table to register the speakers last year it was outside
one of the conference room & it may be in the HARA Hamfest map (??) this year.
Anyone wishing to contact me during the show please leave a message at this table
since I will be at the various forums on the floor or message me here. If you
wish a temporary ID for internet email while you are attending the Hamfest
you can msg me or call this bbs which has full internet email access.. it cannot
be telnet into it (firewalled). There are other that are with local telephone &
telnet, ftp access to get an ID on either prior to comming to dayton msg me
here at apontej@dmapub.dma.org (free one) or at advisor@dayton.fsp.com (small fee but
telnet priviliges full internet). I will have a small portable terminal
a ti707 with me during the show.

that takes care of the communications...

regarding the subject of the meeting is to discuss a multi-single cq wpx
contest station operated by 5 or more concurrent operators remotely sharing the
transmitter resource, they are all in the same band and get a 3-15 second multiplex
slice of the transmitter while they listen from their remote receiver. the discussion
should focus on technical issues first then perhaps on contest rules issues as I
understand them the rule for cq wpx is that the transmitternneds to be physically
connected to the antenna. with this type of set up it is. another issue is
control of antennas direction, how far should the remote operator reciever
be, close enough to hear the station it is transmitting to but far enough
not to overload the receiver when it is transmiting in an adjoining freq. on hte
same band.anyone has experiemnted with this? then there are multiple issues
of real time digital control, what an effective transport to the remote pc
should be modems? tcp/ip.. packet is ou tof the question because of rules &
speed. ISDN? D channel not enough of them. I guess that about cover it
please msg me with expressionof interest to attend. here at
apontej@dmapub.dma.org or advisor@dayton.fsp.com
feel free to post or email elsewhere hope to see u at Hamfest

Don't get too excited :-), you both said the same thing!

I also run an FT-990, for over a year now, I think. Not a single
problem so far.

I use the Yaesu side by side with an Ten-Tec Omni V and actually
prefer the FT-990 over the Omni for all modes except CW. If you
know the Omni, that is saying a lot. Very sweet rig.

SPRATLY ISLANDS. The next operation is slated for April 2 to 5 by
operators 9M6BZ, JA9AG, JQ1WSL, JS1QHO and G3NOM from Swallow Reef.
Listen for 9M0A, 9M0AG and 9M0BZ on CW, SSB, FM, RTTY, AMTOR, PacTOR
and packet. On CW try 1825, 3505, 7005, 10105, 14005, 18070, 21005,
24895 and 28005 kHz. On SSB try 3790, 7080, 14195, 18145, 21295,
24945 and 28495 kHz. FM will be on 29240 kHz. RTTY will be around
7030, 14085, 21085 and 28085 kHz.

SVALBARD ISLANDS. From March 18 through 21, Tom, LA1BJA, and Inge,
LA5VK, will be signing JW1BJA and JW5VK, respectively. They will
operate all bands, including WARC, mostly with SSB. Phone operation
on 17 and 12 meters was authorized for Norwegian amateurs on January
1, 1994, so this may be the first JW voice activity on these bands.
QSL to JW5VK, Inge Johan Lauknes, Oldersneia 10, N-9100
Kvaloysletta, Norway.

TRINDADE ISLAND. Mendonca, PY1UP, will be starting a four month
visit in about three or four weeks. He now has a higher class
license enabling him to operate on more bands. Listen for PY0TUP.

FERNANDO DE NORONHA ISLAND. Peter, PY5CC, will be active until
April 1st, as PY0FM. He will be active on 160-2 meters, including
WARC bands and on CW/SSB. Try 160 meters around 0415z, 80 meters
```

around 0245z, and 40 meters around 2100z. He has also been heard on 30 meters, a rarity for a Brazilian station. QSL via PY5CC.

SOUTHERN SUDAN. John, PA3CXC, is signing /ST0, though his length of stay is unknown. Listen for him on 18072 kHz at 1745z and 24892 kHz at 1830z.

COCOS ISLAND. TI2CF and TI2JJP have been very active as TI9CF and TI9JJP. Carlos operates both phone and CW. Jose prefers SSB. Try 1833 kHz at 0500z, 3795 at 0412, 7007 at 0415, 7052 at 0235, 10104 at 0130, 14024 at 0230, 14195 at 1725, 18145 at 0100, 21025 at 1712, 21295 at 1838, 28025 at 1905, and 28495 at 1916. QSL via TI2CF and TI2AOC respectively.

LORD HOWE ISLANDS. VK9LA has been on a net on 7084 kHz at around 1145z.

NORTHERN MARIANA ISLANDS. Tosy, JA5VZB will sign AH0T from Rota Island sometime this month. Activity will include a stint in the CQ WW WPX SSB contest. Outside the contest hours he will be on 160 through 10 meters, concentrating on 160 meters and RTTY. Check 1824 kHz. All non-JA stations QSL via JA6BSM, JAs via the bureau only.

JUAN DE NOVA. Listen for FR5ZQ/J between March 21 and April 25 operating SSB only. QSL his home call.

EUROPA. FR5ZU/E will be on from March 28 to April 25 with SSB and RTTY. QSL via VE2NW.

THAILAND/NEPAL. Rana, WB4NFO, will be on the air soon signing HS0ZBK. A trip to Nepal is planned and an effort will be made to obtain a license there.

JOHNSTON ISLAND. AH6IO will sign /KH3 May 4 to 9 with NH6UY. Operations will be 160 through 6 meters and satellites. QSL direct only to home calls.

UNITED ARAB EMIRATES, UAE. Don, WB2DND, will sign A61AD March 23 to 26, concentrating on the lower bands. QSL via WB2DND.

THIS WEEKEND ON THE RADIO. BARTG Spring RTTY Contest, sponsored by the British Amateur Radio Teledata Group, is from 0200z March 19 to 0200z March 20. Exchange signal report, serial number and UTC time.

Bermuda Contest, sponsored by the Radio Society of Bermuda, runs from 0000z March 19 to 2400z March 20. Work as many VP9 stations as possible exchanging signal report and serial number.

For more information on both events, check page 111 of February QST.

Someone asked:

>I have a father-in-law who is a ham Chuck Kramer (KE4BWG) he asked where and
>when the word "HAM" came to be...

Regardless of the origin of the word "ham", several of us are on
a quest to discover why so many newcomers write ham as HAM. We
have asked several posters why they do this, and of the few who
bother to reply, most say "I thought that was how you were supposed
to write it".

The typical context is "I want to get into HAM and don't know how to
get started". Why "HAM" and not "ham radio"?

I can only think that since everyone has heard of CB and that is
always capitalized, they think that "ham" must stand for something
and therefore write it HAM. Just as one goes and buys a "CB" (radio),
perhaps they think that you can also buy a HAM [radio]?

Perhaps someone who used to think it is capitalized and now knows
better can tell me why they used to think this. It would clear up
a problem and make several people who have nothing better to worry
about much happier.

^^^^^^^^^^

I don't think one should pick a radio just on looks. I have an 850S-AT with the optional 1.8 SSB filter and enjoy a lot of low band work (160 and 75m) I tried a friend's Yeasu 890AT for two weeks, side by side, using a Daiwa switch in reverse and did a lot of *listening* (as opposed to *seeing*) switching rapidly from one radio to the next. The Kenwood 850 is a lot "noisier", i.e., the human voice is not clearly separated from the background noise, unless you cut back considerably on the RF gain. With the Yeasu, it is seldom necessary to play with the RF gain.

A friend has both the Yeasu 757 and a Kenwood 440AT and he confirms the same findings. The Yeasu is more pleasant to listen to and most of us do a lot more listening than talking. My next rig is likely to be a Yeasu.

The above impression is about SSB reception only. I have not tried anything else really. To be fair, the 850SAT is a little better at avoiding strong QRM, but in practice this was not very important, through the 2 weeks I tried both rigs. The 850SAT is also a quicker rig to utilize and its tuner is faster. My 2 year-old rig has not had a single problem since I bought it new.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z MARCH 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 MARCH AND FORECAST UP TO 22 MARCH

IPS Warning 09 was issued on 18 MAR and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 089/033

1B. SOLAR FORECAST
20 March 21 March 22 March
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 090/034

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth : quiet to unsettled

Estimated Indices : A K Observed A Index 18 March
Learmonth 11 2323 3322
Fredericksburg 13 18
Planetary 15 18

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Mar 35 Quiet to unsettled for the first half day, then
active to minor storm levels are expected.
21 Mar 25 Active.
22 Mar 15 Quiet to unsettled.

2C. MAGNETIC COMMENT
Expected activity is due to a recurring coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

19 Mar normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Mar normal normal normal
21 Mar normal normal-fair fair
22 Mar normal normal-fair fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values.

Observed T index for 19 March: 43

Predicted Monthly T Index for March is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
20 Mar 40 Near predicted monthly values.
21 Mar -10 15 to 30% below predicted monthly values.
22 Mar 10 15 to 20% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

I have an FT-990 that I bought about 2 months ago after a *lot* of
time spent soliciting opinions, reading reviews (if you're thinking
of buying a radio and haven't yet bought the two volumes of collected
QST reviews that the ARRL offers, you should!), and sitting in front
of the units I was considering at the local Ham Radio Outlet.

I'm _very_ pleased with the 990. I haven't tried transmitting anything
yet (I just took and passed my Novice, Tech, General and Advanced tests
about 5 weeks ago and am still waiting for my ticket) but have spent
a lot of time listening. I'll confirm that the the 990 is a very
pleasant radio to listen to. On CW, it's terrific. The built-in
audio filters allow you to zero right in on a signal.

No they're not but you must retain your CSCE along with your license
until you are ready for your general upgrade.

I have received some requests for VHF/UHF logging programs - preferably
public domain.

I don't believe K1EA works on the higher frequencies (above 50 Mhz).

If anyone can point me in the right direction, I'd really appreciate it.

Thanks much!

Scott

: assuming this is because he operates a local "closed" repeater group and
: doesn't want any competition. Oh well...
Competition? he he
he's probably trying to save you the heartache. If you are really
interested try asking someone at one of the local radio places or call
one of the mail order places. They make money doing this, they'll tell
you how. There was also an article in the QRZ CD of Nov. that described
modifying a moto. unit into mobile service. In short all you really need
is a radio, a duplexer and an antenna. The two hardest things to find
are a site (fairly difficult) and most difficult a frequency pair. The
former might be a matter of begging and the latter needs to be taken up
with your local coordinator.

Good luck,
Dan

Daniel, if you stumble upon a small CB ampflier, you might try using it
with your 20 meter QRP rig. Many of these amps are very broad banded, if
sometimes somwhat dirty. I know of a local ham who sometimes steps up
his 5 watt Ten Tec rig to about 50 watts on 40 meters, using a CB amp.

At this time of the year, when the power lines dry out in the country and after a relatively cold winter, I find that the power line noise starts back up. The noise blanker on the Argosy does kill the noise with very little degradation of the desired signal.

The power company is very good about coming out and fixing the problem(s) when I report them. Once you establish a communication link with someone in the power company, treat them with respect, and prove that you are not some bozo just causing trouble, they will listen to you. People who act like jerks get treated in the same manner.

PHASE-3D STATUS REPORT

HR AMSAT NEWS SERVICE BULLETIN 078.01 FROM AMSAT HQ
SILVER SPRING, MD MARCH 19, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-078.01

AMSAT PHASE 3-D INTERNATIONAL SATELLITE BUILDERS MEET IN
MARBURG--PROPELLANT TANKS DELIVERED

During the week of February 10-16, 1994, Dr. Karl Meinzer, DJ4ZC, AMSAT-DL President and Project Leader for the International AMSAT Phase-3D satellite, and Werner Haas, DJ5KQ, Vice-President of AMSAT-DL hosted a working meeting in Marburg, Germany to discuss recent progress on the project. Agenda items centered primarily around the spacecraft's electronic systems including the on-board computer (IHU) and RUDAK systems, as well as the progress now being made by team members on the spacecraft's other electronic modules.

Also during the meeting, the team took delivery of P3-D's main propellant tanks. The tanks were manufactured in Russia under contract from AMSAT-DL and in accordance with AMSAT specifications. Seven tanks were delivered, although one had been subjected to a destructive pressure test by its Russian manufacturer.

Not only have all the propellant tank specifications been fully achieved, but they've actually been significantly surpassed. Each tank can accommodate almost 50 liters of propellant. Favorable conditions for the purchase and delivery of these tanks was arranged through the efforts of AMSAT-UA (Russia). Following a brief inspection, the tanks were immediately shipped to Orlando, Florida, where integration of the satellite is now slated to begin this summer.

Dick Jansson, WD4FAB, AMSAT-NA Vice-President for Engineering, also attended the meeting, principally to discuss various aspects of the satellite's structure with Dr. Meinzer and Konrad Mueller, DG7FDQ. He reported on the good progress of the flight model structure's construc-tion, currently underway at Weber State University in Utah.

Also in attendance were Lyle Johnson, WA7GXD, Peter Guelzow, DB2OS, and Gerhard Metz, DG2CV. Lyle is known through his work with the Tucson Amateur Packet Radio (TAPR) group (which he co-founded) as well as for his work on the Microsats and on the P3-D GPS project. After much discussion, the team decided to again employ a cable wiring harness arrangement for Phase 3-D, similar to that used on AO-10 and AO-13,

rather than an AART-based LAN design. However, the team decided to also fly a CAN bus and DB2OS's experimental LAN controller as part of the spacecraft's digital (RUDAK) transponder.

In a related decision, the group concluded that the AO-10/AO-13 1802-based Internal Housekeeping Unit (IHU) computer design would still be adequate for P3-D with some minor modifications. Lyle Johnson announced his willingness to redesign the IHU and to construct a flight unit. His offer was greatfully accepted.

Other meeting items centered on P3-D's RUDAK work now being done by Peter Guelzow, Gerhard Metz, and Dr. Stefan Eckart, DL2MDL. This team has now decided to build two RUDAKs. The first will be a user-oriented digital communications module constructed by Lyle Johnson, in close cooperation with Peter Guelzow. This RUDAK, which has yet to be formally named, will be the one most P3-D satellite users will operate. A second, more experimental RUDAK (called RUDAK-E), will be built in Germany. It will promote experiments with advanced high speed modems, Digital Signal Processing (DSP) techniques, and new communications protocols.

In a host of other issues, Daniel Orban, ON4AOD, discussed details of the 24 GHz transmitter. Konrad Hupfer, DJ1EE, reported his progress in building the 250 watt U-Band (70 cm) final amplifier. Werner Haas displayed his first flight hardware consisting of two command receivers, a digital section, and the 70 cm exciter that will drive Konrad's 70 cm final amplifier. Freddy de Guchteneirie, ON6UG, reported his progress on the construction of dual V-Band and U-Band receiver "front-ends". Dr. Matjaz Vidmar, S51MV, reported he has now begun construction of the HF-Band, C-Band and S-Band receivers. He expects to deliver working prototypes in May.

While much work still remains to be done, Dr. Meinzer expressed his approval and sincere thanks to all participants for their superb work and close cooperation on this vitally important AMSAT international project. A complete text of this meeting's minutes has been prepared by Peter Guelzow, and has since been translated by Don Moe, DJ0HC/KE6MN. The text will be made available to the various international AMSAT Journals for possible inclusion in their upcoming editions.

[The AMSAT News Service (ANS) would like to thank Peter Guelzow, DB2OS, Don Moe, DJ0HC/KE6MN, Lyle Johnson, WA7GXD, and Keith Baker, KB1SF, for their assistance in writing, translating, and formatting the information contained in this bulletin item.]

ITAMSAT-OSCAR-26 (IO-26) Ground Team Discovers Problem

Starting last week the PSK modulation on the primary trasmitter became more and more difficult to decode. A residual carrier and lower output power seem to indicate a failure in the PSK balanced modulator, being worse at the current low power setting. Increasing the power level makes the de-modulation better but is not accetable due to power budget constraints. Ground controllers decided to switch to the secondary PSK trasmitter on 435.822 MHz. The first two passes over Italy confirmed the correct operation of the spacecraft and WOD are being taken to analize the per-formance of the satellite in this new configuration. BBS is working as usual and status bulletin will be uploaded in the next few days.

SILVER SPRING, MD MARCH 19, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-078.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

26-Mar-94 2130 B 084 WA5ZIB W5IU

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. If neither of the Net Control Stations show up, any participant is invited to act as the NCS.

AO-13 ZRO Tests For March 1994

The following schedule of Mode "B" tests were chosen for convenient operating times and favorable squint angles. The tests can be heard on 145.840 MHz. Andy McAlister (WA5ZIB) will conduct all the tests. Mode "JL" tests will no longer occur due to the failure of AO-13's 70CM trans-mitter.

Day Date (UTC) Time Areas covered

Saturday Mar. 26, 1994 2315 UTC NA, SA

Note that the dates and days are shown in "UTC". Any changes will be announced as soon as possible via the AMSAT HF and AO-13 Operations

Nets.

All listener reports with date of test and numbers copied should be sent to Andy McAllister (WA5ZIB), AMSAT V.P. User Operations, 14714 Knights Way Drive, Houston, TX 77083-5640. A report will be returned verifying the level of accurate reception. An S.A.S.E. is appreciated but not required.

SSTV ON OSCAR 13

Slow scanners are invited to join the SSTV sessions on AO-13. The frequency is 145.955 MHz. The net meets at 45 minutes before Mode S, and on Mode B following Mode S on Saturdays and Sundays. Join those sessions or convey your wishes for other skeds to wb6llo@amsat.org, and he will coordinate your efforts.

Date: 1994-03-20 19:47:13 UTC
From: cchris@charlie.usd.edu
Message-ID: <CMzAyp.9zn@sunfish.usd.edu>
Source record: 269552

I just read in 'THE DX BULLETIN" about subscribing to something called the DX reflector. The administrator's address was given as dx-REQUEST@unbc.edu but this does not appear to work. Does anyone know anything about this or how to get a message to the administrator? If so, I would appreciate some info via E-mail. Thanks.
Chris, AC0M

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

19 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 19 MARCH, 1994

NOTE: Minor stratospheric warming exists over eastern Siberia, Alaska,
Canada, the Canadian Arctic, Greenland, and southern Europe. The
temperature gradient is reversed between 60N and the pole at 10 HPA
and above.

NOTE: The Effective Sunspot Number for 18 MAR 94 was 28.0.
The Full Kp Indices for 18 MAR 94 are: 4o 4+ 4+ 2+ 3o 2+ 2o 3+
The 3-Hr Ap Indices for 18 MAR 94 are: 30 32 31 9 15 9 7 20
Greater than 2 MeV Electron Fluence for 19 MAR is: 4.0E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Just one simple spot group,
7692 (N19E19), remains. The northernmost 8 degrees of the large
diagonally-oriented filament in the western hemisphere
disappeared during the first part of the day. A prominence

located near N21E90 was seen to erupt at 0633Z.

Solar activity forecast: solar activity is expected to
persist at very low levels.

The geomagnetic field has been at quiet to active levels
for the past 24 hours. Nighttime substorms have weakened. The
greater than 2 MeV electron event is declining, with peak
values of near 1.0E+04 observed during the day.

Geophysical activity forecast: the geomagnetic field is
expected to be predominantly unsettled the first half of the
forecast period. A favorably positioned coronal hole should
send high speed solar wind this way the latter part of the
interval. Active to minor storm conditions are anticipated
then.

Event probabilities 20 mar-22 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 20 mar-22 mar

A. Middle Latitudes
Active 25/25/45
Minor Storm 15/15/25
Major-Severe Storm 05/05/10

B. High Latitudes
Active 25/25/40
Minor Storm 15/15/30
Major-Severe Storm 05/05/15

HF propagation conditions were near-normal over all
regions. Similar conditions are expected over the next 24 to
48 hours. However, another well-placed coronal hole could
give degraded propagation again on 22 March.

Uncorrellated: 1 0 0 0 0 0 0 0 001 (100.0)

Total Events: 001 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3110. WARNING: Potential Satellite Anomaly Warning Update - 20 March

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-20 20:13:11 UTC
From: oler@rho.uleth.ca
Message-ID: <9403202013.AA17232@rho.uleth.ca>
Source record: 269555
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

POTENTIAL SATELLITE ANOMALY WARNING

ENDED: 05:00 UT, 20 MARCH

/\

ATTENTION:

Energetic electrons at greater than 2 MeV are finally abating back
toward quieter levels. This disturbance lasted 11 days and is expected to
recur around 04 or 05 April when the coronal hole associated with this
activity returns to a geoeffective position.

** End of Warning **

3111. Desqview Aware CW learning Prog

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-20 20:59:06 UTC
From: dreamer@lhaven.UUmh.Ab.Ca
Message-ID: <Gu1wu*IDR@lhaven.UUmh.Ab.Ca>
Source record: 269558

I'm still trying to learn CW....I still want to try to upgrade before the 1 year mark.

Can somebody suggest a good learning program that will run under Desqview?

My IBM runs Desqview and is the full service Packet BBS (FBB) for the area....it also runs BPQ and JNOS

I tried SuperMorse...it runs, but due to timing...the dits and dahs sound the same.

SB DX @ ALLBBS $OPDX.152
Ohio/Penn DX Bulletin No. 152

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 152
BID: $OPDX.152
March 21, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, DL8AAM, VP2ML & The DX Bulletin, K4CEF & Southeastern Cluster Group, WB4IUX, KH6GMP, WB8LFO and N8BJQ for the following DX information.

1A0KM, SOV. MIL ORDER OF MALTA. "The DX Bulletin" reports that the 1A0KM operation has been postponed indefinitely due to restrictions imposed by the enclave's managers. This is more bad news for this DXCC country which is ranked 20th on the "OPDX/NODXA Most Wanted List".

4U1UN CARDS. Jerry, WB8LFO, reports the large backlog of QSL cards is beginning to get much smaller. Cards sent for contacts that are in the hand written logs should be answered up to March 1993. Cards sent for contacts that are in the computer logs, as of November 1993, should have a quick turn around. PLEASE DO NOT RE-SUBMIT QSLs for contacts made after March 1993. QSL via W8CZN.

A6, UNITED ARAB EMIRATES. Don, WB2DND, will be active as A61AD, from March 23-26. He will be active mostly on 160-40 meters. QSL to Don Greenbaum, WB2DND, 250 Standish St., Duxbury, MA 02332.

BV9P, PRATAS ISLAND. The following information are excerpts from a FAX sent to Ron, K6OZL, from Martti, OH2BH/VR2BH in Hong Kong: As a result of very intensive talks in Taipei during the past week, another brief operation from Pratas will take place from Monday 21 March to Friday 25 March. BV2VA, BV4AS, BV4OB & BV4TC will make touch-down at 12 noon BV-time (+16 hrs Calif. time) Monday. No foreign operators will accompany this trip. Callsign BV9P will again be activated using normal DX frequencies. This operation will be mostly SSB but some CW can be expected as well. Two transceivers will be used (Yaesu FT-1000 and FT-990) with FL7700 amplifiers into a create tribander and wire antennas. QSL via BV2TA.
All the operators are on their first DXpedition with their overall experience in amateur radio less than three years each. This operation

will provide the ultimate challenge to the DX community to behave and cooperate with the operators in such a manner so as to allow the maximum number of QSO's to be made. The operators were provided DXpedition guidelines by N7NG & OH2BH which have been translated into Chinese.

FK, NEW CALEDONIA. Rudi, DK7PE, is now active as FK8/DK7PE, but his length of stay is unknown. He plans to be active on 160 meters and has been heard so far on 1825 kHz at 1125z. Start checking the very low end of 40 meters for him around 1100z and again around 0620z. On 20 meters, check the lower end starting around 0530z. FK8CP also continues to be active on 160 meters every day on 1838 kHz around 1115z. Henri, FK1TK, was heard on AO-13, check around 145.904 kHz at 0600z.

IB0C, ITALY (This one is for the prefix hunters!). GianFederico, IK0AZG, informs OPDX that he will air this special callsign during the following contests: CQ WW WPX SSB (Mar. 26-27), ARI International DX (May 7-8), IARU (July 9-10) and CQ WW SSB (Oct. 29-30). QSL via IK0AZG.

KH3, JOHNSTON ATOLL. Richard, AH6IO, and Pat, NH6UY, are planning to be active from KH3-land from May 4 until May 9. Pat will operate as NH6UY/KH3 and will make satellite contacts only on Oscar 13. QSLs for Pat will be via her callbook address. Richard will operate as AH6IO/KH3 on the HF bands using the following frequenies: 1830, 3795, 7080, 7175, 14195, 14226, 18130, 21305, 24950, 28495 and 50110 kHz. He will operate some CW at times on the low end of the U.S. General Class band. He will try to be active during the night time hours on the lower bands if conditions allow. QSL direct only to AH6IO callbook address.

PA, AMELAND ISLAND (EU-038). Thomas, DL9OBQ, will be active from this Dutch island located in the North Sea Coast (North group). Activity will be from March 27th thru April 6th. He plans to be active CW and SSB. Look for him on the usual IOTA frequencies (.260's) and also on 30/40/80 meters. The callsign is unknown at this time, but a special QSL card will be printed for this operation.

TY, BENIN. Ken, WA4OBO, hopes to be active as TY8OBO again before the end of March, but a report indicates that it may not happen until sometime in April. During his 4 to 5 day operation, Ken will be using a Kenwood TS-50 and Heath SB200 amplifier. He will try to spend more on 80 and 40 meters during this trip. He states 40 meters is a mess there because of all the interference.

VS6, HONG KONG. Tim, KJ4VH, will be returning to VS6WO's QTH for a Multi/Multi effort in the upcoming WPX SSB contest. The contest team will consist of the following operators: VS6WO, VR2GO, 9V1YC, JE1CKA, DL5XX, K3WUW, etc. Their plans are to break the all-time Asian Multi/Multi record and they would appreciate your help! Please look for them in the contest. QSL VS6WO to K9EC. Also, Tim states he will be moderately active as VS6/KJ4VH, and that he may be on from HL and BV over the next couple weeks. Activity will be mostly CW. All his QSOs will be automatically confirmed via the bureau.

YI, IRAQ. YI9CW has been active on 12 and 17 meters this past weekend. He was heard on 18075 kHz between 1400 and 1600z; and also on 24900 kHz at 1344z. QSL to SP5AUC, Tom Rogowski, P.O. Box 11, Warsaw 93, Poland.

DX DINNER BANQUET (UPDATE). Just a reminder! The Southwest Ohio DX Association will be hosting the Ninth Annual DX Dinner which will be held on Friday, April 29th, 1994, at the Stouffer Center Plaza Hotel, Dayton, Ohio. There will be a cash bar at 6:30 with dinner at 7:15. Tickets must be purchased in advance, and are available from Scott Lehman, N9AG, PO Box 803, Greenville OH 45331. Tickets will be $27.00. Please make your check payable to SWODXA, and send an SASE for ticket return. Seating will be limited, so please order early. If you wish to sit as a group, it would be appreciated if you order as a group. All seats will be reserved. Ralph Fedor, K0IR, will be the keynote speaker. Ralph was the organizer of the 3Y0PI expedition and will show slides of the highly successful Peter I Island DXpedition. For further information contact Scott Lehman, N9AG, at (513) 548-6230 or Steve Bolia, N8BJQ, at (513) 429-9954 voice/fax.

SPECIAL NOTE FROM EDITOR: There will probably be no bulletin next week (March 28). I have some family obligations to attend. Please keep sending your DX information. (You never know, I may put one together if I receive enough information before the weekend.)

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

3114. HAM word origin!...

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-20 22:21:06 UTC
From: ve2cnd@CAM.ORG
Message-ID: <2mii8i$iek@altitude.HIP.CAM.ORG>
Source record: 269561

Hello everybody....

The origin of the word 'HAM' come from the first letters of the
first three guys to experiment radio. They were from the Harvard Radio
Club... Their names are Hyman, Almy and Murray.

Originally, they named their telegraph station
"HYMAN-ALMY-MURRAY" but it was too long, so they reduce it to "HY-AL-MU",
but there was a problem : a mexican boat was named "HYALMO", so there was
a little confusion... So, they finally named their station "HAM"...

Oh yeah... That was in 1908....

3116. BAYCOM <-> NOS, YES!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 00:08:54 UTC
From: acornwal@fox.nstn.ns.CA
Message-ID: <72543.acornwal@fox.nstn.ns.ca>
Source record: 269563

About 2 weeks ago I launched the following inquiry on Info-Hams Digest:

>Hello. If you have been able to use a Baycom (Baypac) type
>modem with KA9Q/NOS (for example NOS 1.10x15) I would like
>to know how it is done...

I received several responses and am pleased to report that I have succeeded in getting NOS to work with the Baycom modem. What I needed was an ax25 driver program (ax256drv.zip of January 3, 1993 downloaded from grivel.une.edu.au / 129.180.4.7) written by Pawel Jalocha, SP9VRC. The only glitch encountered was resolved by a simple change of driver software interrupt from the default of 60 to 63 to work with my i386SX laptop.

After more than a week's experience, I am finding that the Baycom (with ax25 driver) works as well as my MFJ 1278 and PacComm TNCs for 1200 bps. It is connected to a Yaesu FT-470 handheld through a 25 watt amplifier to a simple j-pole antenna. (For regular packet operation I have had no difficulty using the Baycom with the laptop running the Eskay SP and MUBAY software, but I am not able to make the modem work with the Baypac program that was bundled with it.)

The reports from other hams were generally very positive regarding use of the Baycom modem with NOS, although there was an instance of heavy packet loss noted in conjunction with an HTX-202 HT. Another ham expressed particular satisfaction with the Yaesu FT-470, which duplicates my experience.

I am grateful for the work of Pawel Jalocha in writing the ax25 driver, and, of course, the work of KA9Q, WG7J and other contributors for producing the NOS program.

My intention here is to set up a internet<->packet gateway. The catch is I want it to be automatic. Once I made that decision I have to deal with Part 97's rules about third-party traffic. That's where the issue greys... What are my troubles? I know vulgarities are a problem, but anything else? If it's just vulgarities, I can just write something to screen those out. What other issues need to be dealt with. Or has that already been done?

: If it's just vulgarities, I can just write something to screen those out.
: What other issues need to be dealt with. Or has that already been done?

I think (and I may be speaking way out of turn here) that the general way people around here have approached this issue is to ensure that email text hits the air (i.e. over packet) *ONLY* at the behest of an amateur, so that then the amateur is the one controlling the transmission (and I guess that means the one liable for any infraction, whether they could know that it would happen or not in advance). So, any email transversing the gateway can only be delivered to a land-based bbs, and must be read from there at the request of an amateur operator. With fine tuning, I believe they can tell that if I originated the message over the airwaves, then it can be delivered over the airwaves to it's destination.

3119. Ramsey Radio FAQs and info

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 02:09:42 UTC
From: ei938@cleveland.Freenet.Edu
Message-ID: <2mivl6$rje@usenet.INS.CWRU.Edu>
Source record: 269490

Ham Radio Folks,
This is my first try on this newsgroup. As the proud new owner of a Ramsey Radio FX-146 (2m) that just finally got working, I'd like to get more info on what can be done with the radio. It seems to work OK, but I'd sure like to add a few modifications. If there an FTP site available or a FAQ on all the neat modifications and upgrades for Ramsey Radios?

I understand from the radio club that there are a couple of bugs in the design that folks have developed fixes for

Please post info on Ramsey Radio, particularly the FX-146, or better yet, send email to me directly and I'll post a compilation of responses. Thanks In Advance for your help.

Andrew Lynch

ac408@dayton.wright.edu

Is there any where else I can find info on this topic? TIA!

That's true, but if I "know" what's not allowed to be transmitted over the air, then I can figure out a way to filter that out. i.e. A message comes from Internet and the destination is over packet. Once the message is received, a program jumps in, scans the message for obscenities (and whatever else needs to be caught), and either replaces the offending text, or deletes the message entirely. If the message is not deleted, then it forwards it over packet, otherwise it sends the message over packet to the addressee of the message stating that it was not able to be sent, due to obscenities, etc. Does that sound plausible?

3121. QSLing packet messages?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 02:18:40 UTC
From: cmoore@mothra.rose.hp.com
Message-ID: <2mj060$9bg@hpchase.rose.hp.com>
Source record: 269496

Hi,

I've recently received several messages via packet asking me to exchange QSL cards. How does one respond to these? Since there was no actual QSO, I can't see filling out QSO information. So what (if anything) does one put on a QSL card in response to a packet message? I'm also a little curios why someone would want a card from a station they didn't actually work.

73,
Chris Moore

>to have it done? Is it something I can do myself? (The CB in question is
>a Cobra Model 19 Plus, manufactured in 1988.) In general, how hard is it
>to do this (ie maybe easier on older model CBs)?

Eric: Check the ads in any QST magazine - there's a company that sells
11 to 10 meter conversion kits. Also, send an email to info@arrl.org
and only write:
HELP
INDEX
QUIT
- when you get the index (via email) look for a file titled something
like CB-10M - order it according to the instruction in the `HELP' file
you receive.

3124. Re: HAM Origin?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 04:57:02 UTC
From: adrandy@aol.com
Message-ID: <2mj9eu$4p4@search01.news.aol.com>
Source record: 269504

The source for "HAM" radio is a magazine called Home Amateur Mechanics popular in the US very early in the century. They popularized home radio, as well as home avionics, and home inventions. The magazine had "HAM aviation" and "HAM invention" columns too. Their column "HAM radio" was probably the first of its kind. No doubt young inventors like Hiram Maxim and others read the book. -- Randy Padawer, WA4FJF

3125. query about paging systems]

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 04:58:24 UTC
From: weisen@alw.nih.gov
Message-ID: <1994Mar21.045824.3633@alw.nih.gov>
Source record: 269501

Sorry for the off-topic question, but lacking a place to post, I figured that this was as good a place as any.

I'm taking a Communications Engineering course for which I need to do a short term paper. I was thinking about doing one on the technical challenges that were faced when implementing the radio-pager systems that are in place today. Can anyone suggest where I could obtain such information. Does such technical information only exist within the confines of Motorola? I'm an image processing person, so I'm not up on the communications journals.

Any help would be appreciated.

Regards and 73,
Neil

In an article T. F. Higginbotham, Ph. D. wrote:

> I am looking for an anonymous ftp site from which I can get the
> longitude and latitude of a fair number of places. It doesn't have
> to be a complete listing. I am mostly interested in places outside
> of the United States, especially Australia.

Try SimTel, e.g. OAK.Oakland.Edu, pub/msdos/graphics

geocity1.zip B 4115 910424 GEOCLOCK - List of World Cities with Lat/Long
geocity2.zip B 19063 910424 GEOCLOCK - MANY more cities with lat/long
geocitys.zip B 10620 910425 GEOCLOCK - more cities with lat/long
geoclk51.zip B 311044 931031 World map w/day-night terminator,times,EGA/VGA

The accuracy of these data is not very high, but it is sufficient for
most astronomical PC programs or satellite monitoring PC programs.

Befor you use the ..city.. files, try geoclk51.zip.

Attempting to get my network access pulled because I've disagreed with you and have ridiculed your more rabid postings? Congratulations fool, you have just gotten yourself the usenet net.nazi award.

You've gone beyond your basketweave wannabe cop fantasies. Now you're running around with your armband showing. What's next? Shall we round up the alledged no-coders, give them a pink triangle for identification and then have them shot?

It is time for a CFV for rec.radio.pendantic. This will give all the anal retentive control freaks a place to rant and feel sorry for themselves. Once the news group is created, they can set Distribution: to dev/null so on each site it is carried, only the posters own postings are shown. That way it not only keeps them from having to see any others comments but it will save a considerable amount of bandwidth.

You're really pathetic. Why don't you go back to your classroom and stay off the network if it offends you so deeply.

After you've finished adding this to your collection, and can get one of your hands free from your lap/nose/whatever, send the following command: "whois grendel.com" (To save you the bother I've included the results, but try it yourself in the event you think I've forged this.)

For those interested in the Volunteer Coastal Patrol, and for
those who work with small ships and have blind and/or
dyslectic persons operating with small ships, please note that
the Royal Blind Society of N.S.W. have available tapes
containing all pertinent information regarding frequencies and
all matters referring to small ship safety and traffic
handling.

These tapes may be obtained from the Royal Blind Society of
New South Wales for a small charge. Their address is 4
Mitchell Street Enfield, phone 334 3333, Fax 747 5993.

These tapes are available to anyone in the Australian area, or
who work small ships in that area.

submitted by VK2SG

RTTY gains another contest

Another RTTY contest will commence from this year. The total
is growing testifying to the popularity and usability of this
mode at any time of the sun-cycle.

This contest will be run by the Polish RTTY Society and will take place on the last full weekend in April in every second year. Mode will be Baudot only.

It is good to see new contests coming in, there have been several started in the last two or three years, and particularly good to have one established in what was a country restricted by previous governmental practices.

Perhaps more countries from that region will become interested in running contests in the HF digital modes, we hope so.

The rules will be published in April so keep watching and please support this new contest -- give them a good start.

Information and rules supplied by VK2SG.

ANARTS April meeting

Please note that, because of Easter, the meeting will be put back a week until Friday 8th April. This is normal practice when the meeting clashes with a public holiday, and the 1st April is Good Friday.

Hope to see some of you there. Time is 7.30 pm and takes place at the QTH of Keith VK2ZZO. For further information contact Col VK2CTD, Jim VK2BQS, or Pat VK2JPA (work 230 3722). Supper supplied.

IPS weekly report

---

11 MARCH - 17 MARCH 1994

Issue No 11
Date of issue: 18 March, 1994

INDICES:
Date 11 12 13 14 15 16 17
10cm 088 093 090 087 087 086 085
A 29 27 21 24 31 19 (22 estimated)
T 25 06 -02 45 23 09 08

SUMMARY OF ACTIVITY

Solar activity was very low 11th, and 13th-17th March, and low on 12th.

The geomagnetic field at Learmonth (WA) was active to minor storm on 11th, then unsettled to active until 15th when the field returned to active to minor storm levels. The field was at unsettled to active levels 16th-17th.

Ionospheric F2 critical frequencies at Sydney were depressed by up to 40 per cent for most of the week during local daylight, returning to near normal during local night, except for 14th-15th when frequencies were near normal all day. Spread F conditions were present during local night on 16th-17th March.

FORECAST FOR THE NEXT WEEK (18 -24 MARCH)

SOLAR: very low

GEOMAGNETIC: active to minor storm levels expected 20-22 March, due to a coronal hole.

IONOSPHERIC MUFs are expected to be 15-30 per cent depressed on 18 March, 21-23 March.

Courtesy of IPS Radio and Space Services

Paper for Teleprinters

Please, PLEASE, does anyone want some teleprinter paper, I have boxes of it. It is triplex paper (three sheets of paper, two sheets of carbon paper), you can have it for the cost of freight (you pay the freight). This paper will work in any pressure machine, or even typewriters, no good for tractor machines. When you unroll it you finish up with three rolls of paper and two rolls of carbon paper. The paper you can use, the carbon -- well you can give it to the children to mess up the house. Don't worry about the amount you want, I have enough.

Contact Syd VK2SG, phone 02-631 2576 or ok in the call book.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI.

Email address for the Broadcast Officer is :

patl@conmusic.pitt.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast footprint. We know we reach ZL and many South Pacific islands. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

That concludes ANARTS NEWS801, 20/03/94.

I think cellular phone is something like the repeater-aided communication
in amateur radio.
so, what is the uplink/downlink frequency (or what the magic is that)?

and one more question:
In cellular phone, I can hear his or her voice as well as mine,
What makes it possible?

: > >>didn't give me a single problem, nor to anybody of my
: > >>friends, who seeing my 990 chose to buy similar rig
: > ^^^^^^^
: > I don't think one should pick a radio just on looks.

: Come on, don't you really understand, that "seeing" in the
: context meant they tested it in all the modes they wanted?

: If it was a joke - I apologize.

: (:-).

Hmm this takes me back a couple of years, the first TS850 I saw was on a stand at a rally. There was a large crowd around it, fighting to spin its knobs and poke its buttons. It seemed rather futile, really, as none of the stands had any electrical power, and the set was consequently unpowered. They must have really liked the feel of those knobs because some people were offering to buy it there and then, untried. One individual in my hearing offered the stall holder a premium over the list price just to get that one, said to be the first in the area. To fully understand the meaning of this, readers in the US must note that in the UK, list price is strictly selling price, although you might get them to throw in an accessory worth a few percent of the deal. UK list price is about double the US prices seen in QST.

I was somewhat stunned by this, and have watched for the effect recurring, which it did at another rally when the TS50 showed up.

I have witnessed people buying radios by appearance !

I just can't decide whether it is a joke or not, although P T Barnum would have found it funny....

Cheers
David GM4ZNX

3132. Re: Looking for Long. and Lat. information

>of the United States, especially Australia.

There are several places that have this information. They are
called libraries and bookstores. Ask for atlas's and gazeteers. A good
gazateer has every four pub town in the country mentioned with lat,
long, pop etc.

3133. What is (and how do I make) a diplexer?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 11:48:23 UTC
From: dtock@nyx.cs.du.edu
Message-ID: <1994Mar21.114823.19200@mnemosyne.cs.du.edu>
Source record: 269577

I know I could go and buy a diplexer (to drive a VHF and a UHF antenna from the single output of my dual bander) but they seem very expensive for what should only be a couple of coils and a couple of capacitors (OK a few of each).

I have checked all my antenna and radio books, and all those I can find in the library, but none of them even mentions diplexers.

Can someone please point me towards or provide design details, or a circuit description, or ANYTHING. Maybe even a different (i.e.correct) name so I can find them in the index. I don't believe there is nothing written about them.

Incidentally, I am UK based, so UK magazines (i.e. RadCom or PW) would do...

Thanks

David (GM0SYA)

3134. Re: Mobile Server

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 12:21:05 UTC

The following is a QST

Los Angeles hams are praised for their work following the January 14th earthquake, Dayton announces this years award winners and the FCC extends an important reply comment deadline. These stories and more on Newsline report number 866.

*****
FIRE COMMISSIONER PRAISES HAMS IN QUAKE COMMUNICATIONS

Ham radio has been praised by the City of Los Angeles for jumping in when hospital communications failed after the January 14th Northridge earthquake. According to Fire Department Chief Alan Cowan, the hams were called on to take the place of the regular hospital dispatch services when the hospital to fire department interconnect failed following the quake.
According to Chief Cowan, communications breakdowns following the quake left ambulance drivers confused about where to take the injured. Speaking a recent Seismic Safety Conference in Burbank, California, Cowan noted that the breakdown was so severe that fire captains had to be dispatched to area hospitals to assess their status and determine where ambulance drivers could take victims. Cowan said the fire department finally reestablished communications when ham radio stations were set up at each hospital. But he added that he felt the existing hospital radio dispatch systems were inadequate for communications between field paramedics and base hospitals.
A hospital association spokesman acknowledged that 12 hospitals declared internal disasters requiring paramedic ambulances to pass them by. The spokesman declined comment on the charges of inadequate communications following the 6.8 tremor. But Seismic Safety Commission members said they were gravely concerned by the performance of hospitals in the hard-hit San Fernando Valley. They say that they were glad that radio amateurs were available to step in when needed.

*****
NEW COMMENTARY DEADLINE ON EMI EXPOSURE

The FCC has extended the reply comment deadline in its proposal to adopt new standards for exposure to RF radiation. The Notice of Proposed Rule Making, in ET Docket 93-62 will adopt strict standards already observed by the American National Standards Institute and the Institute of Electrical and Electronic Engineers in 1992. It is opposed by the ARRL.

The League already has told the FCC that the proceeding should be terminated and has cited a number of reasons for its stand. Key among them is the ARRL view that this is not really an NPRM since it doesn't actually propose to change anything. As such, it should not even apply to the average amateur radio station installation. The League notes that those amateurs even remotely to be affected by new standards are those who are forced to use indoor antennas because of restrictions against outside installations.
The FCC notes that it is extending the deadline in response to the petition of an industry group. The Telecommunications Industry Association says that more than 1200 pages of comments had been filed with the Commission and that not enough time had been allowed for evaluation of that much material.
The FCC now says that it recognizes the complexity of the issues raised by its proposal. As a result the reply comment deadline has been extended to April 25th. A full story on the League's comments in this matter will appear in April issue of QST magazine.

*****
LATEST NUMBERS

The FCC has tallied some numbers on the VE system since its 1984 debut and from their perspective things are looking real good. According to the commission through late 1993 the total number of VE testing sessions held 56,485. The number of people attending these test sessions was 640,453 and volunteer examiners administered 1,052,269 test elements to these applicants. There were no numbers given for the amount of exam cheating taking place but its believed very small in comparison to the overall success of the all volunteer testing system. The latest testing scandal involving at least thirty California volunteer examiners is still under investigation by federal authorities.

*****
FCC DUMPS CHICAGO FINE

In a deal that will permit it to issue new guidelines dealing with indecency on the public airwaves, the FCC is dropping a Notice of Apparent Liability to Monetary Forfeiture in the amount of $39,750 that it issued against a Chicago radio station. When the proceeding first started the station ran under the call WLUP AM but has since changed call to WMVP. The fines were for broadcasts in 1989, 1991 and 1992.
In return, the stations owner Evergreen Media Corporation says that it is dismissing a counterclaim challenging the constitutionality of FCC enforcement of indecency standards, and paying $10,000 to the government without admitting wrongdoing.
The agreement clears the way for the Federal Communications Commission to issue new guidelines explaining the ban on

indecency in all radio and television broadcasts. These new procedures are expected to be released within the next few weeks and could impact on the users of all radio services including Amateur Radio.

*****
DAYTON WINNERS

The Dayton Amateur Radio Association has announced the winners of this years Radio Amateur of the Year, Specific Achievement and Technical Achievement award winners. There are some major surprises this year.
This year's award recognizes a man known for pushing. Pushing for the rights of amateur radio operators. Perry Williams, W1UED, the longtime Washington liaison for the American Radio Relay League.
How does Williams feel to be selected? "Pretty surprised!" commented Perry Williams, W1UED.
In fact, Williams admits he's flabbergasted!
"It's quite a honor. It's coming from the grass roots so to speak cause it seems like a very important honor." Perry Williams, W1UED.
Williams has represented amateur radio on Capitol Hill since 1980. In his 14 years as Washington liaison, Williams has fought many battles on behalf of the amateur service. He has helped oversee creation of the Volunteer Examiner Program. He worked for legislation recognizing amateur radio's need for spectrum. He has helped exempt amateur radio operators from being charged government administration fees. Being named Radio Amateur of The Year is an honor Williams won't forget anytime soon.
"How often does anybody call you up and tell you've won a national honor. Hasn't happened to me before." Perry Williams, W1UED, Radio Amateur of the Year.
The Awards Committee names Russ Kroeker, N7HGE, of Kent, Washington as winner of its Special Achievement Award. Kroeker helped design the Evergreen Intertie. That's a repeater system linking the northwest US with Canada. The Committee's Technical Achievement Award goes to Dick Newell, AK1A, of Bolton, Massachusetts. Newell is recognized for his work in designing packet radio clusters, which are popular in contesting and DXing. All three winners will be honored in Dayton April 30th.
That's just one day after Perry Williams retires from his post with the ARRL. Williams had not been planning on going to Dayton this year. But, he says: "Now I am!" Perry Williams, W1UED.

*****
DAYTON CONTEST GATHERING

Contest operators once again will have the chance to swap lies about their QSO rates at the 2nd Annual Dayton Contest Dinner.

It's slated for Saturday evening, April 30th at 6:30 PM at the Stouffer Center Plaza Hotel. The reservation deadline is April 10th. For more information please send a self addressed stamped envelope to the North Coast Contesters Dayton Dinner, POB 59, New Bedford, PA 16140. This contest dinner is one of many unofficial functions being held in conjunction with Hamvention '94.

*****
CHINESE HAMS ARRESTED?

The Ohio-Penn DX Bulletin reports that rumors are circulating saying all mainland Chinese hams have been arrested for listening to unauthorized frequencies. OPDX says that the story is supposed to have originated on Voice of America.
But the information is now being disputed by Fred Laun, K3ZO. Fred recently returned from Thailand where he operated as HS0ZAR. Fred says that he has doubts about the Voice of America report that claimed all BY hams have been rounded up and sent to labor camps. Fred says that he heard and worked plenty of BAs, BYs and BZs while in Thailand.

*****
UoSAT ANNIVERSARY

Now a ham radio space anniversary. At 17:59 UTC on March 1st 1984 the second satellite designed and built by the University of Surrey called UoSAT-2 was launched on a Delta rocket from the Western Test Range at Vandenberg Air Force Base, California. Among its many experiments, UoSAT-2 carried the Digital Communications Experiment, which was one of the first non-military use of store-and-forward techniques with Low Earth Orbiting Satellites. UoSAT-2 was the test-bed for the packet radio satellites as we know them today. To all those who wonder how long these satellites last, it should be noted that UoSAT-2 is still operational, ten years after launch.

*****
FISHER OBIT

The electronics industry pioneer and philanthropist for whom a New York City concert hall was named has died at the age of 87. Avery Fisher was an influential figure in New York music circles, sitting on the boards of the New York Philharmonic, the Chamber Music Society of Lincoln Center and the Marlboro Festival. Fisher was an amateur violinist whose love of music prompted him to build his own radios and phonographs in the 1930s. From those beginnings, his electronics business was born. Lincoln Center's Philharmonic Hall was renamed Avery Fisher Hall in 1973 after Fisher donated more than ten million dollars to its support foundation. Electronics pioneer Avery Fisher dead at age 87.

*****
OLDEST U.S. HAM DIES

Amateur Radio has lost a very long time member of its fraternity. Reports on packet radio say that Ernest Wheatley, W1UHI of Richmond, Vermont has died. Ernie as friends called him was known as the oldest Amateur Radio operator in the United States. He was active on 2 meter repeaters right up to his death giving cheerful greetings to all. Wheatley was a retired civil engineer. He was only 7 years old when Gugliarmo Marconi invented the wireless telegraph. Amateur Radio operator Ernest Wheatley, W1UHI was 106 years old!

*****
YOUNG HAM of the YEAR

A reminder that the Westlink Report ham radio newsletter that the nominating period for its annual Young Ham of the Year Award closes on Saturday April the 30th. The Westlink Report Young Ham of the Year award was conceived to honor the younger members of the Amateur Radio Community. Hams aged 18 and younger who have used Amateur Radio to significantly contribute to the benefit of the service, to their community or the nation are eligible. With corporate underwriting from Yaesu USA Corporation, the 1994 winner will receive a trip to the Sea Pac convention, a piece of ham radio equipment and a special plaque denoting his or her accomplishments.
All nominations must be submitted on an official application available for a self addressed stamped envelope to the Westlink Report Young Ham of the Year, 28197 Robin Avenue, Saugus, CA 91350. The winner will be announced in early May.

*****
NAB HAM RADIO GATHERING

If you will be attending this weeks National Association of Broadcasters convention in Las Vegas, Nevada, be advised that the annual NAB Ham Radio Reception is on! According to convention planners, this years ham radio gathering will take place on Wednesday, March the 23rd in Ballroom C of the Las Vegas Hilton Hotel. The party will begin at 6 PM and run until at least 8 PM. About 65,000 people attend the NAB show every year. Of these, almost two thousand are licensed radio amateurs. Most make their living in the broadcasting, teleproduction and telecommunications industries and also show up at the ham radio get together. Newsline will also be represented at this gathering. We hope to see you there as well.

*****

For this week, that's all from the Amateur Radio Newsline.

The rules have not changed. I run a internet-packet gateway, and still
look as the mail as being third party traffic from the internet ->
packet direction.

Now let us not forget third-party treaties and business traffic rules.

When In doubt I find that a good course is to follow the more restrictive of
the rulings that apply.

The may not really be an "on point answer" but it is my 2 cents/2 agarot worth.

Shalom and 73's from Jerusalem,
Azriel 4X1PI/W7SI

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

20 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 20 MARCH, 1994

NOTE: Minor stratospheric warming exists over southeastern Europe and western
Siberia, and over eastern Siberia, Alaska, and Canada with the adjacent
Arctic. The temperature gradient is reversed between 60N and the pole
above 10 HPA.

The 3-Hr Ap Indices for 19 MAR 94 are: 24 24 17 21 16 7 9 13
Greater than 2 MeV Electron Fluence for 20 MAR is: 8.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7692 (N18E06)
is the only region visible. No activity of any type was
reported.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet to unsettled. The greater than
2 MeV electron fluxes continue to hover near 1.0E+04.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to mildly active over the next 24
hours. High speed solar wind from a well-located coronal
hole is due early on 22 March. This disturbance should slowly
weaken by the end of the interval.

Event probabilities 21 mar-23 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 21 mar-23 mar

A. Middle Latitudes
Active 25/45/40
Minor Storm 15/25/20
Major-Severe Storm 05/10/10

B. High Latitudes
Active 25/40/35
Minor Storm 15/30/25
Major-Severe Storm 05/15/15

HF propagation conditions were normal over all regions.
Similar conditions are expected over the next 72 hours. Minor
signal degradation is expected at times for high and polar
latitude night-sector paths.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

: definately better, they have a bigger battery too.

: Mike

18,000 ho ho, you've been reading the brochures ! Just decide on a
few creature comforts, a radio other than the one that comes standard
(unbelievably nasty) and you are talking a lot more dosh still. I managed
to resist the temptation of the central heating boiler and freezer, but
occasionally wonder about adding a winch. The headlamps are a bit
lacking (remember Spike Milligan's landladies' light-bulb jokes?) so a
pair of decent lamps is essential, and the lamp bracket needed is #200+
bull-bar shaped... these things are not much diffeerent to range-rover
prices when you get to decent levels of equipment...

With a heavy trailer behind and a pair of large horses, it's true
class shows.

The local RIS man has been given a Discovery with a pneumatic mast
through the roof. He's as happy as the proverbial dog with 2 tails.
they've bolted a 240v generator where the airconditioner pump would go.

Note for US readers, see lower photo on Feb QST cover to see one of
these vehicles out for a little fun....

Cheers
David

Landline BBS Open to All: 916-262-1657
RACESBUL.318 RELEASE DATE: March 21, 1994

Subject: MGT - Participant classification

Question: How are participants in a communications reserve program, such as RACES, classified; and if so, why?

Response: In its communications reserve program plan, such as the RACES plan, a jurisdiction identifies the program participants based on their level of activity and screening required.

Typically a Level 1 participant is one that is screened by a local law enforcement agency before acceptance into the program (i.e., there is a record check as a minimum).

Level 1 participants are active, trained and involved, typically putting in from 2-20 hours a week in service. Level 2 is a person who is not screened and is NOT a regular participant, but signed on for a particular incident. They are normally not screened as their access to facilities is usually very limited. As temporary responders, level 2, if utilized at all, are listed on a incident roster, rather than the normal roster. To put it differently, the Level 1 is that which can be relied upon, while Level 2 is for a possible, or past use. Sometimes people start out on one level and find it appropriate to change to the other one as their time, experience and interests vary.

From Tad Cook, KT7H
Seattle, WA March 18, 1994
To all radio amateurs

SB PROP ARL ARLP011
ARLP011 Propagation de KT7H
Solar flux was down this past week, but geomagnetic disturbances
remained frequent. The average daily Boulder A index was over 25
throughout the week. This made HF communication spotty, but it
enhanced north-south propagation on the higher frequencies.

Look for solar flux to rise to about 110 around the end of the
month. After April 4 the geomagnetic field is likely to become
quite disturbed again if the same active solar regions from four
weeks earlier again rotate into view.

Sunspot Numbers from March 10 through 16 were 56, 66, 78, 60, 35, 41
and 31, with a mean of 52.4. 10.7 cm flux was 88, 88.1, 92.8, 90.1,
87.2, 87.4 and 86.2, with a mean of 88.5.

The path projection for this week is from Springfield, Illinois to
Japan.

80 meters should be open from 0930z to 1200z, and 40 meters from
0800z to 1300z. Check 30 meters around 0730z and again from 1230z
to 1430z. On some days 20 meters should be open from 1400z to
1530z. Check it again from 2100z to 0030z. 17 meters looks good
from 2130z to 0030z. 15 meters may be open some days from 2200z to
2330z. 12 and 10 meters do not look good over this path at this
time, unless the solar flux takes a sudden jump of 40 points or
more.

I just invested $8 at a swap meet for two mobile VHF tranceivers. They are set for the 150-151 Mhz range, and I would like to see if I can get them set up for repeater/packet use. The manufacturer is 'General Aviation Electronics' and the model is 'Genave Mobiline I'. The seller (of course) claims they work and put out about 20W. I can probably get crystals from Jan, but I would appreciate any info I can get on converting these. Thanks...

Indeed. I bagged ZK1AT (N. Cook Island) on 10m phone just yesterday
afternoon (solar flux in the high 80s or low 90s, I believe).
40 watts into a 13 foot vertical with a 6 foot counterpoise from
a third floor apartment. Nothing fancy.

>With beam you may have better chances especialy in south to north direc.

>blind without them.

Even better, project the sun onto a piece of cardboard using a long
focal length lens, or use "eyepiece-projection" with a telescope.
That way, you never have to look directly at the sun.

I still think the WWV method is superior. It is perfectly safe and
it works even when it is cloudy. Your tax dollars paid for it
already, anyway :-).

Amusing, but ultimately a highly-speculative urban legend (along with
many of the other semi-plausible explanations offered). I tend to
believe the land-line telegraphy story (with their "hammy" operators)
offered by "200 Meters and Down," among other historical references.

I'm currently working on a researched entry for the FAQ to summarize all
of these, hopefully with some historical documentation. Watch for
results soon.

Looks like either CQ misprinted this or someone somewhere made an assumption that the ARRL June VHF QSO Party is on its traditional second weekend of June date. As it stands now, the ARRL June VHF QSO Party is on the FIRST weekend of June in 1994.

I've already written letters to several ARRL people to complain about the date change. Dave Sumner at ARRL HQ replied to tell me he is passing it off to the ARRL Membership Services Department. I don't think there's much chance of the date being moved back to its traditional second weekend of June.

3157. Ramsey P-IBM Packet Modem Help

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 19:11:20 UTC
From: prg@theborg.ssd.ray.com
Message-ID: <1994Mar21.191120.3519@theborg.ssd.ray.com>
Source record: 269502

HELP????

Well, maybe it's not so urgent, but...

I recently completed my Ramsey FX146, which seems to be working
just fine, so I figured I'd tackle the P-IBM Packet Modem.

Well, it only took a couple of hours to get put together, BUT
I can't seem to get anything out of it.

After looking through the schematic, and also looking at the serial
port signals, I've got a feeling something's wrong here.

The schematic (and artwork) show that the Packet RXD signal (from
the modem) is wired to pin 8 of the DB-9 computer serial port
connector, BUT, as far as I can recall (and the table on page 15
confirms), pin 2 is supposed to be RD for the computer. TXD is
wired to pin 4, but the table says it should be 3. RTS is wired
to the PTT signal (which seems ok, I guess). In fact, the packet
modem has pin 2 not connected to anything...

I quit the Baycom software and brought up a term program, which
showed no data when connected as instructed... but I DID get "activity"
on the display when I jumpered pin 8 (modem) to 2(computer) through
a break-out box... (Even with this jumper connection, the Baycom
software just sits there...).

I called Ramsey and was told to just simply connect the modem 9-pin to
the computer 9-pin 1-for-1.... but I just don't get it...

Has anyone else gotten this thing to work with a PC/AT style 9-pin
(or otherwise) connector as instructed, or in any way at all..??

Has anyone used the BayCom software with this unit, and am I
missing something big here??

The kit design is several years old.... I'd like to think that SOMEONE
has messed with this before....

Thanks in advance, and 73's all around...

Kok & Will: A number is appended following the prefix if and only if
the country in question has divided itself into districts. Thus, because
the Marshall Islands are so small in land area (lots of islands, though)
the Marshallese government has chosen not to partition the islands
into different radio districts.

3162. Using a cell phone transmitter ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 19:53:15 UTC
From: edward@cs.ualberta.ca
Message-ID: <2mktvb$9e9@scapa.cs.ualberta.ca>
Source record: 269507

Has anybody here experimented with using the transmitter section
of a cell phone. Can the xmitter section be effectively isolated
from the rest of the phone or is the typical cell unit highly
integrated. I've never opened one up (yet :) so I'm interested
in any comments, speculations, experiences etc.

Thanks

edward@cs.ualberta.ca

3163. Info on Dayton Hamvention Please

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 19:59:34 UTC
From: mcraek@mailserv.nbnet.nb.ca
Message-ID: <mcraek.31.0013FEC6@mailserv.nbnet.nb.ca>
Source record: 269526

A co-worker and his dad are driving to Dayton to take in this event, and asked me to post requesting any information available. They are most interested in an agenda or schedule of events, local attractions, accomodations, and so on. This may be his dad's last hurrah due to cancer, and his son (both life-long amateurs) hopes to make it a good trip for both. They also recently lost their mother/wife to cancer as well.

Any input appreciated. Email to mcraek@nbnet.nb.ca. Thank you.

Source record: 269508

I am thinking about buying a 2m HT. I have read the glossy ads,
in CQ and 73 but I can not come to any conclusions.

Which do you use ? What are its good / bad points ?

Is power important or is battery life more critical ?

What features are important DTMF, CTCSS, pageing, ...

I am looking at models from Kenwood, Yeasu, and I-COM. I am
leaning toward the Kenwood TH-28A. I am also looking at the
Yeasu F-11R and 411 as well as a few models from I-COM.

I would appreciated any recomendations or info on these or
other 2m HTs before I take the plunge and buy one.

I do plan on carring it with me once and a while but moslty I
will use it in my car or at home.

Thanks,
Harland

S'right. The first is likely to be the replacement West London machine, which
is likely to be installed about an hour after I remove it from the bench
where it's being soak-tested (since October ...)

I am hard put to recall more than two 2M repeaters ('PI and 'KN) in the Home
Counties area which currently use CTCSS. 70CMs is a different story ...

> QSO Party is on the FIRST weekend of June in 1994.

While you may think this is a bit of a bummer, it *does* coincide with the IARU Region 1 50MHz event (run for the first time in 1994).

Last year, the RSGB 50MHz Trophy contest was run on the same weekend as the ARRL June VHF QSO Party. Although our contest was 8 hours only on the Sunday, I was set up and ready by 1600z on the Saturday. With nothing better to do during the evening, I sat back from my (relatively elevated) position in grid IO82jj listening to the Es QSOs from central / southern Europe rolling past. For a few minutes, the band opened to W4-land, and there were a few surprised ops saying things like 'GW0RDI/P what was that grid again???'

This year, the contest will be 24 hours (1400z-1400z) and you can expect all of the European big guns (this is a relative term - current UK licence restricts *ERP* on 50MHz to 100W) to be active. You may just pick up a few extra grids on 6M this way. It's worth looking ...

I have what most Europeans would describe as a 'good' station on 50MHz - 2 x 7el Create long Yagis plus 1 x 8el Create long Yagi, both fed from a single TX, and feeding separate ICOM 726 xcvrs for receive. If / when the UK authorities see sense, I have a Henry 6N2 .....

What hours (GMT) does your contest run?

3171. Sonobuoys

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-21 23:14:50 UTC
From: Kenneth.E.Harker@Dartmouth.Edu
Message-ID: <2ml9pa$el4@dartvax.dartmouth.edu>
Source record: 269514
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

(Warning: This is somewhat random...)

Last night, three of my fraternity brothers and I were playing poker on the first floor of the house when another brother came back from a weekend at home, and promptly unloaded, among other things, three old sonobuoys. It seems that his brother is an oceanographer, and they were just laying around the basement. Apparently they were used for mapping ocean currents (rather than ASW for example.) His dad wanted to throw them out as they wer etaking up space, but said brother decided maybe someone at school would be interested in them, so he threw them in the trunk and hauled them up here.

So, today we got them out and examined them. Two of them have been opened before. One is small with a propellor-like assembly that evidently flips out and acts to slow down the buoy on its descent into the water. The other one (and the third one, which looks just like it) has a plastic parachute in it. We didn't take either one of them apart completely, but I think I have a basic idea of where the radio units must be in them.

I imagine that the two buoys that have been opened are probably "dead" as there is probably no way to turn them off once the two "buttons" on the bottom of the thing have been triggered. I am curious though - if we were to somehow activate the third, sealed buoy, and it's battery still functioned, what sort of signal does it put out, and is there any way we could monitor it? Alternatively, does anyone know what sort of radios these things have in them? Are they useful for anything other than sonobuoys? What would they be worth?

Also, are there things I haven't considered about these (like safety issues, illegal transmission issues, etc...) that we should be considering while we play around with these? We're over 225km from the ocean here, but we have a large pond nearby, and there's always the Connecticut River :-). If anybody knows anything about these, I can probably find all sorts of numbers and marking to help identify the things.

Thanks in advance and 73's,

: the same findings. The Yeasu is more pleasant to listen to and most
: of us do a lot more listening than talking. My next rig is likely to
: be a Yeasu.

This seems to be a popular pair of radios. There've been several postings over the last months asking for comparisons between these rigs. I've also narrowed my choices down to these two if (when?) I ever replace my Drake rigs. One thing that almost never seems to get mentioned however...

How do these rigs sound on the air! At the risk of starting a flame war, I'll venture the opinion that, in general, I find Kenwoods putting out among the best sounding signals on the air. I've got to admit that I enjoy hearing the reports of superior audio quality that my Drakes seem to get on sideband, and I'd hate to give that up. I like putting out a good pleasing signal! If it weren't for that factor, I'd probably lean towards the Yaesu. As it is, I'm not sure.

Any thoughts or comments on the transmitting audio qualities of the major brands on sideband, particularly these two radios?

BZZZZZZZZZTTTTT !!!!

Potentially wrong answer :-)

Lotsa countries use the number(s) for other things. F'rinstance, in the UK
it denotes a licence *class*. The 'regional' identifier is a letter. Of
course, it can be said that the UK is a collection of countries, and therefore
the additional letter not a regional identifier at all.

Regardless of all that, your statement doesn't square in countries which have
numbers in their calls which are not regionally related.

If *either* of the things I've said above are true, you'll need to rethink
your views on the matter :-)

Saturday nite, March 19th, I was at a St. Patricks
Day party for tall people. Stayed until after midnight -
I was not drinking alcholic beverages, thank you. :-)

I got home to the ranch about 1:30am and decided to
check the TV for possible late news. I don't have
cable, but do have a small yagi for TV/FM in the
attic and it's pointed to the south. I was able
to pick up signals on most channels up to 56, i.e. there was
a signal of pretty good quality on most.

I was getting stations from Houston, Baytown (near
Houston), and other places to the south. Did
anyone happen to be on VHF? Had similar, but not
as good, reception last night. I'm located 35
miles north of Dallas on I-35. Denton County -
are rare one on CW. :-)

Just checking to see if you guys/girls were up
late. Only the OFs, huh? :-)

dit dit

p.s. the only VHF/UHF rig I have is the TV. :-)

Greater than 2 MeV Electron Fluence for 21 MAR is: 7.5E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. The majority of today's
occasional subflare-level activity came from a newly emerging
active Region 7693 (N09W43). This group showed steady growth
and development throughout the day.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field ranged from quiet to minor storm
levels, with some brief major storm periods at high latitudes.
An initially quiet to unsettled field became disturbed after
0300Z and continued at mostly active to minor storm levels for
the remainder of the day. The source is not certain but could
be the result of a coronal hole which should be in a favorable
position at this time.

Geophysical activity forecast: the geomagnetic field is
expected to be at active to minor storm levels for the next
24 hours as coronal hole effects continue. Activity is expect-
ed to gradually decrease over the second and third days.

Event probabilities 22 mar-24 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 22 mar-24 mar

A. Middle Latitudes
Active 35/30/30
Minor Storm 30/15/20
Major-Severe Storm 10/05/05

B. High Latitudes
Active 35/30/35
Minor Storm 35/20/20
Major-Severe Storm 15/05/05

HF propagation conditions were near-normal over the low
and middle latitudes. Periods of active to minor geomagnetic
storming resulted in periods of poor propagation over the high
and polar latitude paths, particularly on transauroral
night-sector circuits. Similar conditions are expected over
the next 24 to 48 hours before settling back to more stable
levels on 24 March.

COPIES OF JOINT USAF/NOAA SESC SOLAR GEOPHYSICAL REPORTS

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep

IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Greetings all...I will be travelling from Saskatoon, Saskatchewan to
Victoria, BC via North Dakota, Montanna, Idaho, Washington. I would like
to use my 2m Handheld along the way.

If anyone has 2m repeater listings for these states, I would appreciate
hearing from you.

thanks a bunch and 73's,
Zennon Slowski (VE5 ZCS)

This is one of a host of "authoritative" versions of the origin of the
word. If it were as clear-cut as you suggest, then all the different
origins wouldn't float around in the mythology. Much of the language of
the early hams was adopted from land-line telegraphy, which had been around
since 'way back in the mid-19th century, and tracking down real origins of
words at that remove is virtually impossible. No objection to your posting
your version, but I'm concerned that it's _not_ labelled as mythology.
This is a very powerful medium, and some researcher a century from now may
find a record of your posting and cry, "Eureka!"

>me was finding the three ait dielectric trim caps. By the time I
>have paid for those at about US$8.00 each (small lot cost) I have
>paid for half of one already built and tested.

I opened up a commercially available diplexer, and they don't use the caps mentioned in the article, they use two to four ceramic disc caps in parallel and air wound inductors. I duplicated what was in the article with cer disc substitutions, and it works BETTER than the commercial version. My layout was a lot tighter than the comm one, since they used a circuit board that could be machine stuffed.
The commercial version has about 1dB loss, mine has about 0.5dB and at least five fewer inches of conductor length, and I used tails for in/out.

In addition to that, I noticed that all of the VHF/UHF spring sprint dates are wrong. They've all been moved out by a week. This move IS for the better. Now the 2m sprint doesn't coincide with the NCAA basketball championship game and the 432 sprint isn't the Wednesday evening preceeding the Dayton hamfest, etc..

As I remember from the 850 review in QST sometime back they didn't like
the 850 at near full output on SSB. They claimed it got a bit dirty (wide)
I think. Maybe someone with the article handy can give the exact quote.

3189. RF and AF speech processors. Was: FT-990 vs TS-850

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-22 15:28:45 UTC
From: ignacy@ux2.cso.uiuc.edu
Message-ID: <2mn2rd$ol0@vixen.cso.uiuc.edu>
Source record: 269389
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

It seems that the SSB quality depends on 3 factors:
1. Passband characteristics of the AF chain (including the microphone),
2. IMD of the PA,
3. Type of processing, audio or RF?

I am wondering why the QST reviews do not mention the type of processing,
which has a large effect on signal quality. Signals with audio processing
have higher content of AF harmonics, and are subsequently less efficient
(3db?) and more difficult to tune. All cheaper rigs such as IC 725-737,
FT 747-757, TS 430-450 use AF processing. IC 751-, FT990-, TS 830-
use RF processing. I am not sure about the rest.

> The origin of the word 'HAM' come from the first letters of the
>first three guys to experiment radio. They were from the Harvard Radio
>Club... Their names are Hyman, Almy and Murray.

This story is (or so I've heard) reported in the Congressional Record... these three were instrumental in retaining spectrum for amateur operators. According to the story, people began referring to their H.A.M. station... and thus the word became popularized... if this is true, there should be some print documentation in the newspapers and media of the day.

I'd be interested in what you come up with. :)

ARLB027 Haller to head task force

ZCZC AG91
QST de W1AW
ARRL Bulletin 27 ARLB027
From ARRL Headquarters
Newington CT March 22, 1994
To all radio amateurs

SB QST ARL ARLB027
ARLB027 Haller to head task force

FCC Private Radio Bureau Chief Ralph Haller has been named to head a Commission task force on personal communications services (PCS).

The Commission said that the task force would provide ''a focal point for all of the PCS issues currently before'' it. The task force would work with all of the FCC's bureaus and offices that are involved in PCS issues, and would be responsible ''for assuring consistency between policies and rules for narrow-band and wide-band PCS.''

FCC Chairman Reed Hundt said that ''I am confident that under the leadership of Ralph Haller, the PCS task force will lead the Commission in the timely development of a comprehensive regulatory framework for PCS.''

Other members of the task force include Tom Stanley, Chief Engineer; Robert Pepper, Chief, Office of Plans and Policy; Donald Gips, Deputy Chief, Office of Plans and Policy; and Michael Katz, Chief Economist.

3195. DTMF generator for Sound Blaster/repeater controller in development

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-22 23:35:42 UTC
From: wkinning@nyx10.cs.du.edu
Message-ID: <1994Mar22.233542.8566@mnemosyne.cs.du.edu>
Source record: 269397

```
Here is a DTMF Tone Generator for the Sound Blaster written in Pascal.
Jim is working on a repeater controller based around a PC/XT system with
advanced features like voice mail and macro programming via 1200 baud ASCII.

Please reply to : jjacobse@siucvmb.siu.edu
-------------------------------------------------------------

(*
To All hams interested.

I said a long time ago that I would release this source code. Well, here
it is! It does work rather well, and in fact, better than the phone!
I am currently developing a ** FREE ** repeater controller package
around this idea, along with voice mail and the like, but, I am in
need of some more assistance. Is anyone interested in helping me out with
some ideas? I just need a jump start, and I would prefer to have some
source assembler code for another repeater controller.

Not too long ago, I saw such a program, but lost it (and the BBS is down!)
Please, if you can help me out, drop me a line via the internet address
given below (It is hard for me to read this newsgroup; just send me a note).

Thanks,
Jim (N9IEO)
internet: jjacobse@siucvmb.siu.edu

Message-ID: <22653.553.uupcb@brent.uucp>
Source record: 269398

randyh@gvgadg.gvg.tek.com (Randy Hall) writes

>1. Without the separation kit for the front panel, does the panel just pop
>off for security concerns, or do you need a screwdriver to remove it from
>the front of the radio?
>2. With the separation kit, panel remoted, does the front panel just pop
>off from bracket?
The front panel pops off the radio and the remote bracket without
any tools. The cord for the remote bracket screws onto the front of
the radio. Screwdriver is required for that operation only.

>3. What does the bracket that holds the front panel consist of? How
>much freedom of mounting and angle adjustments are there?
The bracket is hinged, and allows the panel to rotate up and down.

>4. Where does the external speaker plug into to, the radio or remoted panel?
There are 2 speaker jacks on the back of the radio. One for the
primary band, one for the secondary band.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z MARCH 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 MARCH AND FORECAST UP TO 25 MARCH

No warning is current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 091/036

1B. SOLAR FORECAST
23 March 24 March 25 March
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 090/034

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with brief
minor storm period 12-15UT.

Estimated Indices : A K Observed A Index 21 March
Learmonth 21 4333 5423
Fredericksburg 17 22
Planetary 20 27

Observed Kp for 21 March: 3644 4443

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Mar 20 Unsettled, with possible active periods.
24 Mar 15 Quiet to unsettled.
25 Mar 15 Quiet to unsettled.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Mar normal fair-normal fair-normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND

These things used to be popular in the beginning days of 2 Meter FM;
there was an article published somewhere called the "sonobaby" that
showed how to convert one to the 2 M FM ham band.

The one I had had a saltwater activated battery that put out something
like 15 VDC and transmitted somewhere around 150 Mhz FM. There was no
effort made by the designer to miniaturize the circuitry, and it ran
something like 1 watt. There was also a timer circuit that melted a
fuseplug that sent the thing to the bottom after X hours of transmitting.
The body of the sonobuoy had about 100 feet of what looked like miniature
twinlead connecting the hydrophone to the FM transmitter.

I doubt seriously if the sonobuoy is worth anything other than a cur-
iosity point.

> issues, illegal transmission issues, etc...) that we should be

You can always take it apart, put in a ham band crystal and retune it.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

22 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 22 MARCH, 1994

NOTE: A large region of stratospheric warming exists from southern to eastern
Europe and southwestern Siberia, and is strengthening. Warm air is
spreading north and northeastwards.

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7693 (N08W56) showed
some growth early in the period but was quiet and stable. A
hedge-row prominence was visible on east limb throughout the
day.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field ranged from quiet to minor storm levels.
The more disturbed periods were 0000-0300Z and 0900-1800Z, and
the other times were typically quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to active for the next 24 hours. Con-
ditions should be predominantly unsettled for the second and
third days although there may be occasional brief periods of
active levels.

Event probabilities 23 mar-25 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 23 mar-25 mar

A. Middle Latitudes
Active 25/25/10
Minor Storm 25/10/05
Major-Severe Storm 10/05/01

B. High Latitudes
Active 25/25/10
Minor Storm 30/10/05
Major-Severe Storm 10/05/01

HF propagation conditions were slightly below normal over
the high and polar latitude regions for the first half of the
UTC day, but improved to near normal by the end of the day.
Near-normal propagation conditions are expected over all
regions during the next 72 hours through 25 March inclusive
although a few periods of night-sector high-latitude minor
signal degradation will remain possible.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Please forgive the cross posting if you will.

I need a room for two for Thursday, Friday and Saturday night at Dayton.
We have one room at the Hampton House with the FRC, and want one more
closeby if possible.

CU at contest forum and dinner, FRC suite, hamfest etc.

Tnx Bob

Probably best to go for 'low-tech' solutions if you are after a radio-quiet environment; the fewer microprocessors etc. you have, the less likely you are to get hit by clock oscillator harmonics etc. Count the number of microprocessors in use; the more there are, the greater the risk of problems!

Many auto companies produce 'special pack' models for use by the Police etc; these often come fitted with radio-desirable options [like a bigger alternator, larger battery, proper interference-filtering and pre-installed power take-off terminals] as well as uprated brakes and suspension; you may find a lower level of trim finish, and fewer 'gizmos' though. I used to have an ex-Police Range Rover [the 'Fleetline' model] which had a 120-amp alternator, twin batteries etc. but only rubber mats on the floor.

Even Diesels have their problems; apart from being pitifully slow, they may have electronics to control turbos, injection timing, transmission shift, anti-lock brakes etc etc.

Certainly true about the voice characteristics, but when a rig
changes locations and starts getting poor audio complaints,
one might want to be sure there is no "RF in the mike" syndrome
present. Major RF levels will be obvious, but low levels
might not. SSB is especially sneaky since the distortion
only occurs on voice peaks, not the whole signal.

If it is anything like a standard Navy buoy, it broadcasts VHF-FM on one
of 99 channels, ranging in frequency from 136.00 - 173.5 MHz.

If you can supply the channel number (it might be printed on the buoy, or
selectable by a little switch on it), I can give you the frequency.

Hope this helps,
Tom Leber

: >But I think if I can get some info about something my prof has not hear
: >of it will help. So is there anyone out there with info or know how I can get
: >some.

: We're talking about the constant rain of micrometeoroids here, not the
: big visible ones. Individual "pings" are short, but there's a constant
: source of them. Hams who work meteor scatter tend to wait for the big
: meteor storms and use the longer, and rarer, pings off the larger trails,
: but that's not necessary. Only if you use analog voice or hand keyed
: Morse are the longer pings needed. If you use digital burst communications,

Long bursts are also needed for AX.25 packet. I don't believe amateurs
have actually developed an optimized data system to take advantage of
meteor scatter. I'd estimate that there are approximately 0 data
links in the amateur service that rely on meteor scatter right now.
I suspect that amateurs are still busy working on other options that
seem offer more capability.

: and good FEC, you can take advantage of the constant supply of short pings
: available from micrometeoriods.

CAMATEUR RADIO EXAMINATION OPPORTUNITIES
C
C
C
C*****************************************************************
C
CSpecial Note: Amateur Radio licenses usually arrive between 8 and
C 10 weeks after the test session. The FCC considers their
C processing time to be 90 days--from the date they receive the
C application. The FCC usually receives the application one
C to two weeks after the test session (once the VE Team and the
C coordinating VEC have completed their processing).
C
C
CNote: Codeless Technician to Technician w/HF upgraders (who pass a
C Morse code test) will not receive a new license from the FCC.
C The existing Technician license plus the CSCE conveying the Morse
C code test credit is the only documentation issued for use of
C the additional HF privileges.
C
C*****************************************************************
C
CThe following test session information is provided by the
CARRL/VEC for the upcoming six to eight week period. For
Cfurther information, please contact the test session CONTACT
CPERSON at the telephone number provided. If necessary, you
Cmay contact the ARRL/VEC at 203-666-1541 x282 for additional
Cinformation. Electronic mail may be forwarded to the ARRL/VEC
Cvia USENET at "bjahnke@arrl.org" or via MCI Mail to
CMCI ID: 653-2312 or 215-5052.
C
CAlthough the test session information presented here does
Cnot indicate whether walk-ins are accepted or not, most test
Csessions do allow walk-ins. We encourage you, however, to
Calways contact the CONTACT PERSON at the telephone number
Cprovided so that the VE Team is aware that you be attending
Cthe test session.
C
C
CSTILL NEED TO PREPARE FOR YOUR EXAM?
C
CIf you would like information on how to become licensed; or
Chow to locate Amateur Radio clubs, instructors, licensing
Cclasses and/or Novice examiners in your area; please contact
```

Cthe ARRL Educational Activities Department (EAD) at 203-666-
C1541 x219. The EAD can also provide information on
Crecommended study materials. Electronic mail may be forwarded
Cto the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
CMCI ID: 215-5052.
C
C
CAFTER THE EXAM - HOW LONG WILL IT BE BEFORE MY LICENSE ARRIVES?

CIf you've recently passed your initial examination for an
CAmateur Radio license, or if you've just upgraded, please
Caccept our warmest congratulations! Now that you've
Cpassed the test, receiving your license in the mail is the
Cnext step.
C The FCCs current license processing time is at
C90 days. In addition, there will be extra time required
Cwithin the volunteer examiner system of two weeks
Cor so allowing your VE Team and VEC (if for Technician class
Cor higher) time to process your application, your license
Cmight not arrive for up to 12 to 14 weeks.
C To keep your wait for that new license or upgrade as
Cshort as possible, we are taking the following steps to give
Cyou the fastest possible service.
C We have begun providing our VE Teams with express OVERNIGHT
Cmailers for the return of applications from ARRL/VEC exam
Csessions to us at the VEC--and we at the VEC have begun
Csending our daily packages to the FCCs Licensing Facility
Cvia an express OVERNIGHT service.
C We are also encouraging our VEs, and imposing
Cthe same emphasis upon ourselves, to process examination
Cpackages as quickly as possible to expedite your license.
C Having implemented the above procedures, the ARRL/VEC
Cwants your wait for your new license to be as short as
Cpossible.
C If you have any other suggestions about the program, or
Cservices we provide, please feel free to contact us.
C You can help keep the processing time as short as possible
Cby ALWAYS bringing all ORIGINAL CSCEs (plus copies of them) and
Cyour ORIGINAL FCC license (and a copy), plus your identification
Cdocuments (photo-ID emphasized), to every test session you attend.
C
C
CTHINGS TO BRING TO THE EXAMINATION
C
CBe prepared to bring the following items with you to VEC
Cexaminations: Your original current FCC-issued Amateur
CRadio license (and a copy of it)--if you are licensed; Any
Coriginal Written or Code Element credit documents (CSCEs)
Cwhich are currently valid; Two forms of identification
C(e.g., a photo-ID or drivers license and another item

```
Cindicating your current name and address); A calculator (if
Cnecessary); A pen and two pencils; and, the applicable
Cexamination test fee ($5.75 for 1994 test sessions).
C
C
CTECHNICIAN CLASS GRANDFATHER CREDIT
C
CIf you hold a Technician class license which was issued
Cprior to 3/21/87, you are not required to take the Element
C3B (General class written) examination if you can provide a
Ccopy of your FCC-license dated before that date. If your
Clicensed has since been renewed, and if you don't have a
Ccopy of the pre-3/21/87 license, you must seek a
Cverification letter from the FCC.
C
CTo do so, write to FCC, 1270 Fairfield Rd, Gettysburg PA
C17325-7245 and request a letter of "Verification of Technician
CLicense Held Prior to 3/21/87"--verifying that you were licensed
Cas a Technician class licensee before that date (the date the
CTechnician Question Pool was split off from the General class
CQuestion Pool -- March 21, 1987). After you receive that letter
Cfrom the FCC, bring it to the test session with you in order
Cto claim your deserved credit.
C
C
CLOST LICENSES
C
CIf you have lost your license, be aware that VECs are not
Cpermitted to submit any upgrades to the FCC without a copy of your
Ccurrent license attached to the 610 form. In order to
Cexpedite your upgrade, you must write the FCC and request a
Creplacement license. Since that can take several weeks to
Carrive, we recommend that you also request a Form 1010-B
Cverification letter from the FCC which will arrive in a
Ccouple of weeks--and is legally binding license document.
CYou may use that form as a license until your Form-660
Clicense arrives. The original and a copy of Form 1010-B
Cmust be brought to the test session verifying that you are
Ccurrently licensed--the copy of which will be attached to
Cyour upgrade application (in lieu of an actual Form-660
Clicense copy). To request the Form 1010-B Verification
CLetter, write to: FCC, 1270 Fairfield Rd, Gettysburg PA
C17325-7245; indicating that you lost your license and that
Cyou are requesting that a replacement license be issued to
Cyou--also be sure to request that they send you a Form 1010-
CB Verification Letter verifying that you are licensed.
C
C
CACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED
C
```

```
CThe FCC requires that the administering VEs must accommodate
Can examinee whose physical disabilities require a special
Cexamination procedure. To do so, the administering VEs may
Crequire a physician's statement indicating the nature of the
Cdisability before determining which, if any, special
Caccommodative procedures must be used.
C
CThe VEs may accommodate handicapped/disabled examinees by
Cadministering the examination at a place convenient and
Ccomfortable for the examinee--even at bedside; for the
Chearing impaired the Morse code may be sent using flashing
Clights or a vibrating surface; for the visually impaired,
CVEs may read or write for the examinee; where warranted, the
CVEs may pause the Morse code message after each
Csentence/phrase, or each word, or even after each character
Cto allow the examinee additional time to absorb and
Cinterpret what was sent--also the VEs may substitute a
Csending test for a receiving test where the examinee's
Chandicap warrants.
C
CVE Teams may need advanced notice in order to provide the
Cnecessary accommodations to examinees who require them. If
Cyou will require accommodations, please contact the VE Team in
Cadvance to advise them of your needs.
C
C
CEXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS
C
CIf you are a severely handicapped or disabled individual and
Chave already passed at least a 5 WPM Morse code examination
C(or hold a license which meets that requirement), you may be
Celigible for exemption from the 13/20 WPM Morse code
Cexamination requirements. For information and applicable
Cforms, send a SASE to the ARRL/VEC, 225 Main St, Newington
CCT 06111, and request our Handicapped Information Package.
C
C
C
CEXAM LISTINGS - DEFINITION OF FIELDS
C
CSTATE
CTest Date,VEC,City,,Contact Phone,Contact Person
C
CThe SECOND field in the following listing specifies the VEC
Cwhich is coordinating this examination. This single-character
Cdesignator denotes the VEC as defined below. An "A" (for example)
Cindicates that this examination is coordinated by the ARRL/VEC.
C
CFor further information on any examinations listed, or if you do not
Cfind any examinations listed for your area, you may contact
```

```
Cany of the coordinating VECs below.
C

No, Inidiana was recently purchased by Illinois for future expansion. Your
program correctly shows the recent changes.

Jim, WA6SDM

>> than sonobuoys? What would they be worth?
>

Please be *extremely careful* with this device. The main battery is
seawater activated, and there is a inflatable collar float that inflates
and an antenna that is extended when it enters the water (actually, when
two pins on the body of the sonobuoy are shorted). You don't want to
be holding the device when this happens!

The signal is 1W, VHF-FM, transmit only. Old ones had a single channel,
newer ones can select one of 99 channels (synthesized).

Be careful! And don't transmit out of band for whatever services you
are licensed for.....

Well, the World Almanac says the coordinates for Indianapolis are

39.7678 N
86.1628 W

So I'd say that, gadget or no gadget, your Lat/Long figures are wrong.

>Besides, who appointed you the moderator for the news group?

Now I say:

Perhaps someone should explain to Jeff who Brian is, what Brian stands
for, and why, if Brian decides it should be so, almost no one will be
able to hear him. I'd do it, but it might be more fun to watch Jeff
squirm a little...

3218. Voice mail on a repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-24 05:48:54 UTC
From: bote@access.digex.net
Message-ID: <bote.764487800@access3>
Source record: 269420

wkinning@nyx10.cs.du.edu (Warren Kinninger) writes:
>Here is a DTMF Tone Generator for the Sound Blaster written in Pascal.
>Jim is working on a repeater controller based around a PC/XT system with
>advanced features like voice mail and macro programming via 1200 baud ASCII.

I have only heard voice mailboxes on the ACC garbage.
I know that other repeater controllers have voice mailboxes.

How does voice mail on a ham repeater perform? I am curious
about actual users' experiences.

If each member has an assigned voice mailbox, then that
might be useful, but it would definitely drive up the volume
of traffic on the repeater as people check in
for messages. Even if the repeater announces that
messages are waiting, that increase in noise itself
could become annoying after a while.

On the other hand, I have begged for certain stations
to reach their destinations or change frequencies
while they incessantly called over and over and
over again for someone to no avail.

Is voice mail something that many hams want on their
favorite repeater?

Comments welcome.

The 3-Hr Ap Indices for 22 MAR 94 are: 34 12 7 12 46 12 12 12
Greater than 2 MeV Electron Fluence for 23 MAR is: 2.7E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Only a few small flares were
observed during the day. Region 7692 (N18W32) showed some
development and Region 7693 (N08W70) was decaying. There were
indications of some small erupting flux regions near day's end
at N08E62 and at S10E45.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field ranged from quiet to active levels
with some brief minor storm periods at high latitudes.
The higher levels of activity were limited to the 0300-
1500Z time window.

Geophysical activity forecast: the geomagnetic field is
expected to be predominantly unsettled for the next three days.

Event probabilities 24 mar-26 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 24 mar-26 mar

A. Middle Latitudes
Active 25/10/10
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 25/10/10
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

Near-normal HF propagation conditions dominated over most
regions today. High latitude regions (transauroral paths)
experienced some minor signal degradation during the night, but
were otherwise near-normal. Similar conditions are expected
over the next 72 hours. Near-normal propagation should
dominate.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep

3220. Need info on Icom (delta)1A HT

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-24 07:31:12 UTC
From: jdwhite@iastate.edu
Message-ID: <2mrfk0$o76@news.iastate.edu>
Source record: 269422
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am considering purchasing this tri-band HT and was wondering what kind of experiences people have had with it. I'm very curious as to how far out of band it will receive on the three bands and also in any mods there are for it.

Thanks, in advance, for any information you can provide.

I was wondering if other 5200 owners could receive Air band transmissions.
I'm not even sure if the radio will switch to an AM receive mode in those
bands. I have performed the extended TX mod.

You can use DSP; it is not that hard to write the appropriate
software that will perform a passable attempt at processing,
but the really tricky thing [read: needs lots of instructions and
a well-specified DSP system] is to get a consistent group-delay
characteristic across the audio passband.
Without consistent group delay, the phase relationship between the
input and output of the filter is frequency-dependent, which sounds
horrible [like someone talking in a tunnel?] and will also cause some
strange effects when used for data-modes that depend on consistent group
delay characteristics.

Its also necessary to maintain consistent amplitude response
across the audio spectrum; if you fail to do this, then for a given
level of processed signal at the output, some input frequencies will
have been more heavily processed than others. Ideally, you need
some form of frequency equalisation before the processor, which
has to be tailored to suit the particular users voice, and the
response characteristics of the microphone in use.

Cheap AF processors use AF clippers. DSP-based processors are not only
novelties now, but they are more xepnsive to built than RF processors.
Why AF clippers are worse than RF (IF) clippers? Consider a 500Hz
tone test. With AF processor you will get extra 1000,1500,2000,2500
Hz tones. With RF (SSB and DSB) processor 500Hz will be the only
output. Please note that some older rigs have "implicit" RF
processors. For instance, SWAN 500 has 7360, a beam deflection tube,
as a DSB modulator. By clipping peaks, it acts with the following XTAL
filter as a DSP processor.

Check out my article in Feb. 93 QST "Everything You Always Wanted To Know About Computer-Controlling Modern Radios" (I didn't pick the title :). It has plans for a Kenwood interface that is opto-isolated and implements the handshaking lines as well as the data for complete compatibility.

I also still offer the parts kits listed at the end of the article. Prices are the same, ($47 for Kenwood kit, $44 for Icom/Yaesu/Ten-Tec) but the address is now:

CW Technology
7328 Timbercreek Court
Reynoldsburg, OH 43068-1181

COD Orders Only (add $5) at 800-547-7479

The kits include PCB and all board mounted parts. You provide case and 8-15V supply.

NOTE: ARRL has the PCB layouts and the parts are readily available - you do not have to buy anything from me.

E-mail if you need more info

>service, an answering machine, or a substitute for a cellular phone.

Bravo, Gary!

There are two extremes: typical of one is the 146.85 machine in Derry, NH, which says "Good morning. The time is xx:xx" every ten minutes or so, has a cute beep when someone lets up, *mutes* the ham talking if he dares to talk while the CW ID is in progress (it IDs about every three minutes), announces "control operator changeover", "net tonite at 7 o clock", and does a bunch of other hi-tech crap, including speed dial of everything in the world on its phone patch. It has an incredible location, and because of all the funny stuff it does, is a prime candidate for unlicensed or future unlicensed people jamming and trying out random TT sequences.

The other extreme is in Nashua, NH, on 147.045. This repeater retransmits what I do. If I happen to be talking when it needs to ID, at about 9.5 minute cycles, the tone is muted 10 db or so, so that while it complies with part 97, it doesn't interfere with the human who is using it. It also seems to have a speech compressor so that everyone is about the same loudness on the output.

I think the latter is properly called a "repeater"; the former might be better described as a "game boy" or something like that.

No. Take a peek at my reply to the last post for a pointer to my article in 2/93 QST. As you hint, the Icom CI-V system is a single wire bus run against ground. A number of computers and radios can sit on this CSMA/CD bus. I won't bore everyone with the details. The article goes into it.

The interface I described for Icom (as well as Ten-Tec's Omni-VI and Argosy II) is pretty simple. It is not optoisolated, but does use a 7407/7417 buffer for some protection.

>Canadian QTHs but HAMCALL has many other countries. I keep saying *my*
>version as there may be updated versions by now.
>Russell Lee G6GL george@golflima.demon.co.uk

I have the QRZ! CDROM, and bought it specifically because the callsign
databases inside were not encrypted in any way.
The callsign databases are simply comma-separated one-line-per-call
text records.

I liked this because I'm using the call database on a UNIX (Sun)
system, and can easily write database massaging code in Perl.

Oh, and yes, QRZ! was significantly cheaper. I got mine mailorder
for $15 + shipping.
$50? I guess the Buck$master name is appropriate.

Can anyone comment regarding pros/cons of the HamCall product?

73 de Ken N2TIA

Perhaps this may sway your decision one way or another.

3235. Motorola GPS engine group purchase update

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-24 21:58:41 UTC
From: bonomo@specxn.enet.dec.com
Message-ID: <1994Mar24.215841.28632@nntpd2.cxo.dec.com>
Source record: 269437

Status on the Motorola GPS engine group purchase:

Greetings, all!

This is a quick note to let all of you who have responded to me that I am actively pursuing this venture. Two weeks ago, I telephoned Motorola and spoke with a woman who indicated she would send out information. Said information has not yet arrived.

This morning, I spoke with the Sales Manager for the GPS core product, Oncore. She is sending me a price quote for the 100+ unit order, along with specs. As soon as it arrives, I will post to these newsgroups. I will also be obtaining price quotes for the software which accompanies these units, which is to be used for DGPS and other things.

As of the writing of this memo, there are "orders" for 67 units, with "possibles" for ten others. I have several requests from overseas, which is not expected to be a problem. The sales manager is sending me information as to which areas have export restrictions, which I will also include along with the specifications. She also said some recent military evaluations indicated that this engine is the only one they found acceptable, and is sending that report information, as well.

For those of you who are reading about this for the first time, I am coordinating a group purchase of Motorola GPS core engines, collecting names for those who would like to participate in said activity. The rumor going around was that these $450 (single quantity) engines could be had for $150 in 100-unit lots. I have no idea as to the actual price, but it is "in the Mail", according to Motorola.

If you are interested, send mail with the quantity in which you are interested. When "critical mass" has been reached, I will inform all parties which have submitted their names of this fact, as well as post it to the newsgroups. At this time, monies will be deposited in an account, which will be used to pay for the purchase. When all monies have been deposited, the order will then be placed.

Again, I'll post any information on this when it becomes available.

Regards,

Tommy

3239. Hamfest Listing

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 01:35:26 UTC
From: cps@access.digex.net
Message-ID: <2mtf4u$2iv@access3.digex.net>
Source record: 269441

I've been searching around for a listing of upcoming hamfests, and have been unable to find one. So, I've decided to do the next best thing - create my own.

My goal is to periodically post a comprehensive listing of upcoming hamfests, for the entire US (if the list gets too large, it could be broken up into regions).

This is where you all come in - I need for people to email me with details of upcoming hamfests that they are aware of. The information I need is:

The name of the hamfest, the location, the date/times, And anything else pertinent (cost, name of contact, etc).

Please send the information to me at: cps@access.digex.net

Thanks,

Chris

3240. Regency Radio

I couldn't find a netnews group for commercial radio questions so... I'm looking for someone with a schematic on a Regency(Realm) H256B 16 Channel Scan VHF Transvr. I have a transistor Q105 in the control panel bad, it is marked Motorola but the number must be for Realm only...

Thanx for the help ....reach me e-mail

3241. Re: QSLing packet messages?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 01:51:22 UTC
From: Gerry_Jurrens@walnut.prs.k12.nj.us
Message-ID: <1994Mar24.215122.813379@walnut.prs.k12.nj.us>
Source record: 269443

I agree that it seems a little silly to exchange QSL cards for an exchange of packet messages, yet the PBBS is full of solicitations (CQs, etc.) imploring certain states to come forth with replies! I guess if you're an apartment dweller with a no-code tech and a rubber duckie a block from the nearest packet board, it's a way of getting your jollies!

One thing is sure: in ham radio, there's something for everyone!

3242. Re: Desperately looking for logging program for Mac

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 03:31:48 UTC
From: slay@netcom.com
Message-ID: <slayCn7B51.M76@netcom.com>
Source record: 269444

: What I am looking for is a logging program
: for the Macintosh which can help me printing QSL-labels,
: help me count how many different DXCC countries I have,
: and do other "smart" things.

: I think it is very boring writing QSL cards, but it has
: to be done. hi.

Congratulations on your operation.
First of all, I personally have used only TWO logging programs written for the Macintosh - neither of which will totally satisfy you.

The first is QLOG - a general purpose logging program which was written using Fox-Base and is painfully slow and I do not know if it is even being supported. Last I heard, it was still be offered by:

ZCo. Corporation
P.O. Box 3720
Nashua, NH 03061-3720 USA

Please be aware that I have repeatedly tried to contact these people and even sent an SASE - but without response. However, recently another ham in that area called them and was told that they still sell QLOG, but are not actively marketing it.

My personal favorite is the Marathon contest logging program for the Macintosh written by Kevin Krueger N0IOS. If he would put a "DXpedition" mode in it and possibly a utility to print QSL labels, we would be in "fat city". ;-)

For more information on Marathon (and I am a very staunch supporter of this s/w - but have no financial interest), contact:

Kevin Krueger N0IOS
1780 Ruth Street
Sain Paul, MN 55109 USA

I suggest that you also send along your e-mail address since he "may" be able to respond quicker.

Good luck & 73

Well, if by no longer employed by them you mean unemployed, then you have
plenty of time to hop on a plane and get here in time for this weekend.
It won't be as if you have someplace to be.

Hi,

Here's a design question. I am looking at the front-end RF amp
which uses a 2N3904 and asking myself if I were to replace this with a
transistor with a lower noise figure, say a 2N5179 or BF689, will I see
any improvement? Is this mod worth pursuing? How much improvement can I
expect to see here?

Tks.

Daniel

3246. Re: Why no 10 meter activity??

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 12:26:09 UTC
From: "Simon Browne"
Message-ID: <2mul91$6vo@hawk.eng.warwick.ac.uk>
Source record: 269448

There's certainly a lot to be said for plenty of CQ calls and
monitoring of 10m beacons, even at what would be considered
unusual times of day. There are several 'unusual' propagation
modes, affecting high-, middle- and low-latitudes, which
are game for exploitation, especially TEP (Transequatorial
Propagation) and sporadic-E. TEP uses the large F-region
densities at about 15 degrees dip angle north and south of the
magnetic equator, allowing a 2F mode without an intermediate
ground reflection in a 'tilt' like fashion, giving propagation
at higher frequencies than usually expected over distances s
of 4000 miles or so on north-south low-latitude paths crossing
the equator.
Sporadic-E exists at most latitudes for an amount of time
depending on time of of year. At low latitudes, it may exist
for most of the daylight hours throughout the year, so
lots of 10m possibilities as the MUFs tend to be high
on medium-long range paths. At middle latitudes it's mainly a
summer activity, and again during daytime, with a peak of
activity around local mid-late morning. June last year saw
mid-latitude Es on at least half the days of the month
in europe, and no doubt the US too.
At high-latitudes Es is more of a night time phenomenon. The
highest MUFs occur late evening, with frequencies up to, and
possibly above, 100 MHz being supported. This doesn't seem to be a
seasonal effect, and certainly gives high-latitude stations
possibilities for 10 and even 6m activity on a regular basis.

So, at low and high latitudes there's no excuse for avoiding
10m. At mid-latitudes it's worth bearing in mind that such modes
do exist, although with low solar activity little may be seen
except summer Es. There ar possibilities for summer Es combinig
with TEP for a bit of DX, as has been seen on 6m on occasions
when EU stations have worked southern Africa.
It's also worth bearing in mind that there's still a lot to
be understood in this field, and amateur observations do play
an extremely important role, at the same time doing no harm to
the amateur cause.

Simon G0GWA.

3248. Re: Voice mail on a repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 13:42:16 UTC
From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.94Mar25134216@rinhp750.gmr.com>
Source record: 269464

In article <bote.764487800@access3> bote@access.digex.net (John Boteler) writes:

I have only heard voice mailboxes on the ACC garbage.
I know that other repeater controllers have voice mailboxes.

How does voice mail on a ham repeater perform? I am curious
about actual users' experiences.

The USECA repeater serves the metropolitan Detroit area with two to three (don't ask) satellite receivers and a central transmitter. It is a very busy repeater and the communual watering hole for a lot of very sociable people. It is equipped with a voice mailbox but the users do not have private mail boxes. When recording a message, the user is prompted "Who is your message for?" and then "Please leave your message". Periodically, or on command, the repeater will announce "There are messages for" and then play back the message that was left after the first prompt. A user can play back a specific message by it's order in the list. Ie: The first, second, third ... message. All users have create, list, play and delete privileges. Although the repeater is heavily used, the voice mail box is seldom used. It *NEVER* gets in the way and often is quite a useful communicatios tool.

An example:

(U=user, R=Repeater)

U: "N8ABC for the mailbox" <-- Let control ops know who and what
(enters access code)

R: "Who is your message for?"

U: "N8BCD" <-- Message identification

R: "Please leave your message"

U: "Jim, I'll be out of town for a few days but my wife
can give you the radio. Please call her and make
arrangements to pick it up."
(enters code to end recording)

R: "Your message has been stored."

U: "N8ABC Clear of the mailbox" <-- Let other ops know rptr available

------time passes------

R: "There are messages for" <-- Announced ~3 times per hour
"RACES and ARES members" when idle.
"N8BCD"

"Fox hunt rescheduled"

U: "KB8ABC for the mailbox" <-- Alert the control ops again
(enters access code for message 3)

R: "Fox hunt rescheduled" <-- Recite message id and message
"Saturday's fox hunt has been postponed
until next Saturday at the same time."

U: "KB8ABC clear of the mailbox" <-- Repeater available again

I've used it for person-to-person stuff a few times myself, but
would rather use the telephone. It can't be beat though for the
general information kind of messages (Eg: "Fox hunt rescheduled").
We have had one or two inappropriate messages over the past few
years but with universal message delete authority they don't stay
on the air very long.

To all radio amateurs

SB DX ARL ARLD017
ARLD017 DX news

The items in this week's bulletin are courtesy of Joe, NJ1Q; the Ohio/Penn DX Bulletin; and the Yankee Clipper Contest Club PacketCluster network. Thanks.

PRATAS ISLAND. BV9P is active on 40, 20, 15 and 10 meters. The operation was worked from Illinois on 7024 kHz at 1445z today. Check 7060, 14195 and 21295 kHz too. They will go QRT about 0700z on March 25.

SPRATLY ISLANDS. 9M0A will be an all-band multi-op starting April 2 and run for 5 days.

SOUTHERN SUDAN. PA3CXC/ST0 has been worked on 18070 kHz between 1700 and 1800z.

IRAQ. YI9CW was busy on 17 and 12 meters last weekend. Check 18075 kHz between 1400 and 1600z. Also try 24900 kHz at 1344z. QSL to SP5AUC, Tom Rogowski, PO Box 11, Warsaw 93, Poland.

HONG KONG. VS6WO will host a multi/multi effort in the WPX SSB contest. The team consists of VS6WO, VR2GO, 9V1YC, JE1CKA, DL5XX, K3WUW, and KJ4VH. Their goal is to break the all-time Asian multi/multi record. QSL VS6WO via K9EC. Outside of contest hours, Tim, KJ4VH, will also be on as VS6/KJ4VH with mostly CW. He hopes to be active from HL and BV over the next couple weeks.

UNITED ARAB EMIRATES, UAE. Don, WB2DND, should be active as A61AD through the weekend, concentrating on 160, 80 and 40 meters. QSL via Don Greenbaum, WB2DND, 250 Standish St., Duxbury, MA 02332.

BENIN. Ken, WA4OBO, hopes to sign TY8OBO before the end of March, but this may not occur until April. He will try to spend more time on 80 and 40 meters on this trip, though 40 meters is difficult due

to interference.

TRINDADE ISLAND. PY0TUP is expected to start a four month operation starting early in May.

JOHNSTON ISLAND. Richard, AH6IO, and Pat, NH6UY, plan a five day operation to start on May 4. Pat will operate as NH6UY/KH3 and will make satellite contacts on Oscar 13. QSL via NH6UY CBA. Richard will operate as AH6IO/KH3 on HF around 1830, 3795, 7080, 7175, 14195, 14226, 18130, 21305, 24950, 28495 and 50110 kHz. He will also operate some CW on the low end of the General Class band. Some low band nighttime operation is planned. QSL direct only via AH6IO CBA.

WALLIS ISLAND. Rudi, DK7PE, is on as FW/DK7PE, though his length of stay is unknown.

SAINT MARTIN ISLAND. FS5PL has been quite active on the lower end of 40 meter CW at around 0400z. QSL via FG5BG.

QSL CLARIFICATION. W Leslie Clarke, GI0KAN/EI5HC, continues to receive cards for EI7M. The correct QSL Manager is EI5FT.

THIS WEEKEND ON THE RADIO. The phone portion of the annual CQ World Wide WPX Contest starts at 0000z March 26 and runs through 2400z March 27. Exchange signal report and progressive serial number starting with 001. Details appear on page 112 of February QST.

SB DX ARL ARLD016
ARLD016 Pratas Question on Hold

ARRL DX Advisory Committee Chairman Robert Beatty, W4VQ, has
announced that the question of new country status for Pratas Island,
BV9, has been removed from the DXAC agenda pending receipt of
further information from the petitioner. A vote had never been
scheduled on the petition.

Upon receipt of the requested information, the matter will be placed
on the agenda, and a vote scheduled.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
March 25 to April 03, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

SKYCOM Version 1.0
Ionospheric Signal Analyst

** THIS IS THE LAST WEEK OF THE SPECIAL OFFER **

Can your propagation software do this? See previous weekly reports for additional features:

- Generate Broadcast Coverage Maps showing regions of high or low ionospheric focusing or defocusing.
- Produce contoured global maps of the maximum height of the F2 layer, ionospheric M-factors, or even critical frequencies of the E and F2 layers, for any date, time, or level of geomagnetic activity.
- Produce global monthly median maps of ionospheric quantities (MUFs, foF2, hmF2, etc) in complete agreement with the International Reference Ionosphere, for any date, time of day, or sunspot/solar flux number.
- Display cross-sections of the ionosphere between any two geographical points, showing you the internal structure of the ionospheric layers, ionospheric layer tilts, effects of the Equatorial Anomaly, etc.
- Show fully contoured maps of magnetic latitude and longitude, magnetic inclination angles, and even the total magnetic field strength.
- Include effects of polar cap absorption (PCA) and solar flares in signal quality computations.
- Determine propagation conditions during any time of day, while including effects from sporadic-E, PCA, solar flares, and geomagnetic and auroral storming.
- Rigorously compute maximum usable frequencies (MUFs) and optimum working frequencies (FOT) between any two geographical locations using ray-tracing results, for any date, time, or level of geomagnetic activity.

MUCH MUCH MORE . . . Bar none, one of the most elaborate propagation packages available for amateurs and professionals.

ALL ORDERS TAKING ADVANTAGE OF THE SPECIAL OFFER MUST BE *POST-MARKED* NO LATER THAN 31 MARCH 1994.

For more information, contact "Oler@Rho.Uleth.CA", or
"COler@Solar.Stanford.Edu". Pricing information can be obtained from the
e-mail address above, by writing to us through postal mail, or by calling
the recorded message at: 403-756-2386 (approx. 3 min). A special offer
applies until 31 March 1994.

Geomagnetic Field	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Anomaly
Conditions	Given in 8-hour UT intervals	Intensity
_____

CONFIDENCE LEVEL: 70%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

3255. EM Spectrum Allocations

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 16:50:02 UTC
From: danois@montrouge.sinet.slb.com
Message-ID: <danois-250394114207@smr201.montrouge.smr.slb.com>
Source record: 269456

Could anyone point me to a file which would have latest frequency
allocations,
for the complete spectrum, by countries? (Not only amateur frequencies,
such
as ftp-able from arrl.org)?

-- E. Danois --

3256. ATV transmitter components

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 16:59:54 UTC
From: hersman@iri.tudelft.nl
Message-ID: <1994Mar25.165954.1@iri.tudelft.nl>
Source record: 269457

Hello ,

Recently in Holland a magazine published an ATV transmitter, designed
by G4WIM .
The problem is that some components are'nt available in holland,
the
MC145151P2 (Motorola) and
M67715 (Mutsubishi).

Maybe someone knows how to get these components ?
Please email and thanks in advance.

Addy Hersman

ARLP012 Propagation de KT7H

ZCZC AP26
QST de W1AW
Propagation Forecast Bulletin 12 ARLP012
From Tad Cook, KT7H
Seattle, WA March 25, 1994
To all radio amateurs

SB PROP ARL ARLP012
ARLP012 Propagation de KT7H

Solar activity remained very low last week. Geomagnetic conditions ranged from unsettled to active, with a few quiet periods. The most disturbed days were March 17 and 21 when the A index was above 20. March 20 was the most stable day, with the A index at 8 and the K index dropping all the way to zero during one period.

For the SSB WPX contest this weekend look for a slightly rising solar flux, possibly reaching 100, with fairly stable geomagnetic conditions. 20 meters should be the best all around band for worldwide DX during the daylight hours and into the early evening.

Unfortunately, the short term rise in solar flux should reach a maximum of only about 100 early in the week, and then drop back to around 90 by April 5, when a recurring coronal hole is expected to raise some havoc. April 4 through 7 could be very disturbed, if conditions from the last solar rotation four weeks earlier are any guide. After the drop in solar flux it should increase again to around 105 by the middle of April.

Sunspot Numbers from March 17 through 23 were 30, 24, 11, 11, 26, 35 and 32, with a mean of 24.1. 10.7 cm flux was 85.1, 87, 89.1, 88.6, 90.7, 91.1 and 91.8, with a mean of 89.1.

The path projection for this week is from Sweetwater, Tennessee, which is between Chattanooga and Knoxville, and United Arab Emirates.

80 meters should be open from 0030 to 0230z, and 40 meters from 2330 to 0300. 30 meters looks good from 2300 to 0330, and 20 meters from 2000 to 0030, with the best time from 2230 to 2330. 17 meters should be open from 1430 to 1930. 15 meters does not look very promising, but check from 1700 to 1830. 12 and 10 meters do not look good at this time, but there is a very slight chance of a 12

meter opening from 1600 to 1900, and on 10 meters around 1800 to
1830.

3258. Re: QSLing packet messages?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 18:05:30 UTC
From: JAY@medicine.dmed.iupui.edu
Message-ID: <JAY.15.2D9327EA@medicine.dmed.iupui.edu>
Source record: 269459

A QSO is "A conversation between two radio amateurs". A QSL card is "A postcard that serves as a confirmation of communication between two hams."

(These are quoted from "Now You're Talking" Copyright 1993 by ARRL.

When you look at these definitions, QSL cards for exchange of packet messages makes sense. Email messages are conversation between two radio amateurs, so that makes it a QSO. If email messages are a QSO, then a QSL card would be approriate. Using these definitions, a QSL card would be acceptable as a confirmation of a phone call or a person to person conversation.

I'm not "an apartment dweller with a no-code tech and a rubber duckie a block from the nearest packet board" but I don't see any reason why a person that meets this description would be treated any different from other hams.

I'll have to look in my copy of Part 97 to see if an apartment dweller with a no-code tech and a rubber duckie a block from the nearest packet board has less rights to enjoy ham radio.

Jay
KA9OKT

>I agree that it seems a little silly to exchange QSL cards for an exchange of packet messages, yet the PBBS is full of solicitations (CQs, etc.) >imploring certain states to come forth with replies! I guess if you're an >apartment dweller with a no-code tech and a rubber duckie a block from the >nearest packet board, it's a way of getting your jollies!

>One thing is sure: in ham radio, there's something for everyone!

KA5WTO

3260. Re: FT-530 and FT-41R

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 19:51:56 UTC
From: paulc@fc.hp.com
Message-ID: <Cn8KIK.HI1@fc.hp.com>
Source record: 269461

On FT530 voltmeter error:

I have a different problem. Mine reads about .5 volt low at about 7 volts, progressing to 1 volt low at 13 volts. Don't know if this can be tweaked up or not. It's still a useful thing to have.

-Paul C.

3261. 2N2222 vs 2N2222A (was HAMS and hams)

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-25 21:32:09 UTC
From: William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM
Message-ID: <9402257646.AA764631129@smtpgty.anatcp.rockwell.com>
Source record: 269462

In article <2mfo8e$c69@geraldo.cc.utexas.edu> oo7@astro.as.utexas.edu (Derek Will s) writes:

[stuff about the capitalization of ham deleted]
>
> Perhaps someone who used to think it is capitalized and now knows > better can tell me why they used to think this. It would clear up > a problem and make several people who have nothing better to worry > about much happier.

I say: I suppose it depends on which legend re: the origin of the term "ham" as it applies to amateur radio comes from. Several of the legends indicate the term is from either initials or an acronym, and both would be properly capitalized.

Jeff NH6IL writes:

Here's more to worry about: why capitalize

MF, HF, VHF, UHF, CW, AM, FM, SSB, D-layer, E-layer, F1-layer, F2-layer (and why no A- B- or C-layers?), ...

I say: In the above examples, the capitalized letters are initials

Any difference in specs between a 2N2222 and a 2N2222A xsistor? (And why did I capitalize the N and A?) An xmtr I'm building calls for 2N2222A's but all I have are dozens of 2N2222's (from dumpster diving behind the Engineering Department's building - amazing what they throw out).

I imagine the `A' version is the new and improved model.

I say (now on the real subject): The "A" devices have a different gain characteristic, (hFE @ 10v 10ma 50-325 for the 2222, 75-325 for the "A"), higher minimum breakdown voltages, lower VCE sat voltage. In most cases, it won't matter which you use. The chips are the same and the manufacturer screens for part type selection. Since the 2N2222 minimums are lower than those for the 2N2222A, A 2N2222A can always sub for a 2N2222, a 2N2222 may not always work for a 2N2222A. Both devices were registered at the same time, so it is not a matter of "new and improved". Check a Motorola small signal spec book or MIL-S-19500/255 if you really need to know the finer points.

>would give you a neat CW xcvr.

A mighty poor one, though. First, an AM detector usually makes a lousy
product detector (hey even if it's just beeps, it should sound good); second,
you have a 6Kc bandpass instead of 3Kc, for twice the noise.

3263. Re: Voice mail on a repeater?

Newsgroup: rec.radio.amateur.misc

Are there any repeaters left in this country that just repeat, including no musical tones or beeps when you drop your carrier? I miss the old days when all one heard was a nice solid kurchunk of the repeater receiver's squelch tail quickly followed by a second squelch tail from my receiver (the repeater carrier would drop off after 1-2 seconds). This seemed to be the way most of the public safety repeaters were also set up (particulary the California Division of Forestry repeaters back when I was a fireman in the early 70s).

Gary: I'll be disappointed if your repeater beeps.

: 1.5 kHz and 1.5 kHz (receiver output)? ...

Clipping a full-carrier DSB (AM) signal is equivalent to clipping the positive peaks of the baseband audio. I believe that symmetrical clipping of a suppressed-carrier DSB signal is equivalent to clipping both + and - peaks of the baseband audio. If you want to get the full benefits of RF speech clipping, you have to do it on the SSB signal.

In general, low noise transistors have the most beneficial effect at higher frequencies. If your RF amp is working at about 10 MHz or less, you probably won't notice much improvement. Above that, a simple test is to listen to the noise with the antenna connected, but no signal present. Disconnect the antenna and see if the noise drops. If it does, then the limiting factor is the noise from the antenna, and not the noise generated in the front end transistor. If it DOESN'T drop, then a lower-noise transistor is called for.

You can get real fancy with noise figure measurements if you want, but for ordinary ham purposes, this test will tell you what you want to know.

How were you able to find when your callsign was issued? I'm anxiously
awaiting my very first Novice + HF callsign, and would love to know
what it is before it arrives. I know I can't XMIT without the paper, but
I could get a jump on my personalized license plate! ;-)

Hello there everyone,

Well this is my first post to the wonderful world of Internet so if I have done something wrong please let me know.

I am looking for an extended transmit mods for the IC-2410H from Icom. I have already cut D8/D9/D10 diodes. I have a mod for the extended VHF TX but will that also work for the UHF? If not does someone have the correct procedure?

Any help would be appericated. Please mail responses to:

hallock@matt.ksu.ksu.edu

Thanks for your help,
Chris N0SGL

uk.radio.amateur Frequently Asked Questions
===========================================

This will be a periodic posting to uk.radio.amateur and rec.radio.info of
UK-specific questions and answers on amateur radio. It is not intended to
be exhaustive, but to point you towards sources of further information
where necessary. I would welcome any constructive views on this FAQ to
ukfaq@topsy.demon.co.uk .

For ease of distribution, the edition of this FAQ posted to Usenet has been
cut into 2 parts.

The latest version of this FAQ is available for anonymous FTP from
ftp.demon.co.uk

Part 1 of 2
-----------

Questions
---------

Obtaining a licence:

1. Is a licence necessary ?
2. How do I get a licence ?
3. What are the types of licence ?
4. What is the Radio Amateur's Exam ?
5. What is the Novice Course and Exam ?
6. Where can I take these exams ?
7. What if I fail ?
8. I passed the exams, now what ?

Initial Operating:

9. What is a callsign ?
10. What frequencies am I allowed to use ?
11. What can I transmit ?
12. How do I know what to do ?
13. Where can I buy a radio ?
14. Can I build a radio ?
15. Can I modify a radio ?

International:
```

16. I have a UK licence, can I use it abroad ?
17. What is a CEPT licence ?
18. I hold a CEPT licence, how do I sign in the UK ?
19. I want to operate in the UK, I don't have a CEPT licence.

Morse:

20. What is morse ?
21. Where do I learn morse ?
22. Do I need to learn morse ?

Repeaters:

23. What is a repeater ?
24. How do I use a repeater ?
25. What is CTCSS (Tone squelch) ?

Packet-Radio:

[Editor's note: the following section is necessarily brief but I will consider including better explanations of packet if they are offered, would anyone care to supply an explanation of ATV ?]

26. What is packet radio ?
27. What equipment do I need for packet radio ?
28. What are the limitations of packet radio in the UK ?
29. Can I leave my packet station unattended ?
30. Can I use packet to exchange messages with Internet users ?
31. How do I obtain a .ampr.org IP address ?

Licence Regulations:

32. UK Band Plans.
33. Can anyone use my radio ?
34. I have a dual-band rig, can I use it as a repeater ?
35. My neighbour complains that he can hear my voice on his television.
36. I want to take my radio to sea / in an aircraft.

Further Advice:

37. The Radio Society of Great Britain
38. The Radiocommunications Agency
39. Local clubs
40. Specialist clubs
41. Commercial magazines
42. Internet news-groups
43. Other FAQs

Misc:

44. Is the UK callbook available on disc/CD-ROM ?

73:

45. Caveat
46. Credits

---

1. Is a licence necessary ?

A licence for amateur frequencies is only required if you intend to transmit on those frequencies. A listener's licence does not exist. The requirement to hold a licence is in the Wireless Telegraphy Act 1949. You do not need a licence to purchase or own an amateur transceiver, only to transmit with it. No licence is required to receive any amateur transmission.

2. How do I get a licence ?

Unless you already hold a licence issued by another country (see below) then you must satisfy the licencing authority (the Radiocommunications Agency (RA) currently) that you are technically competent to use an amateur transmitter. The DTI lays out the minimum standards and the City & Guilds Institute holds examinations to test licence applicants. You must obtain a pass in the examination(s) before submitting the licence application form to the RA. A useful publication from the RA is 'How to Become A Radio Amateur' obtainable free from the RA at Waterloo Bridge House, Waterloo Bridge Road, London SE1 8UA. Telephone 071 215 2150 (+44 71 215 2150). This publication includes an application form.

3. What are the types of licence ?

The primary licence type is the Amateur Radio Licence. This licence has 'A' and 'B' variants. Holders of the 'A' licence are permitted to transmit on all the amateur frequency bands allocated in the UK. The 'B' licence holder is restricted to transmitting on those frequency bands above 30MHz. Obtaining either variant of licence requires a Pass in the Radio Amateur's Examination. The second licence type is the Amateur Radio Novice Licence. Holders of Novice licence are restricted to transmitting on a small number of the frequency bands available to holders of an Amateur Radio Licence, and to which portions of those bands they may use. There are 'A' and 'B' variants with holders of the 'B' licence restricted to transmitting on bands over 30MHz. Obtaining a Novice licence requires a Pass on an organised Novice Course and a Pass in the Novice Examination. In the case of either a Novice or a Radio Amateur Licence, the licence issued is a Class 'B' licence unless the applicant has passed a Morse code test in which case a Class 'A' licence is issued.

4. What is the Radio Amateur's Examination (RAE) ?

The RAE is a two paper multiple-choice examination held twice yearly at City & Guilds Examination Centres. It tests electronic theory, licence conditions, interference & operating procedures. The C&G reference is 765. The C&G charge GBP16.50 (1993 level) for each paper, a Pass on both is required. The Examination Centre may also make a charge. Several books exist for self-teaching of the necessary subjects to pass the RAE and these are available from the RSGB, amongst others (see below).

5. What is the Novice Course and Exam (NRAE) ?

The Novice Course is a 30 hour training course organised by the Radio Society of Great Britain and run at local radio clubs and schools. The course typically lasts 12 to 16 weeks. The courses will normally be timed to finish a few weeks before one of the four Novice RAE's held each year. The C&G reference is 773. The Novice Course Instructors will prepare a candidate for the NRAE. The Exam is one paper testing a wide range of subjects learnt on the Novice Course. A Pass on both the Course and the NRAE is required.

6. Where can I take these exams ?

Both the RAE and NRAE can be held at any City & Guilds exam centres, but it is up to each centre to decide whether to hold the examinations and local centres should be contacted direct. Some radio clubs and schools have registered themselves as C&G centres. There is a list of the participating C&G centres in the 'Callbook and Information Directory' published annually by the Radio Society of Great Britain (RSGB). The Novice Course is run locally but the RSGB has a register of courses and can advise you of the nearest one. Their telephone number is 0707 659015 (+44 707 659015).

7. What if I fail ?

If you fail one of the papers of the RAE then you can re-take only that paper at the next examination. If you fail both papers then you can re-take the RAE. There is no limit on the number of times you may take the RAE, but the fee will be charged each time. Similarly for the Novice Course and NRAE, either element can be re-taken.

8. I passed the exams, now what ?

Complete the application form (Novice Instructors have forms for Novice applicants) and send it with the RAE/NRAE Pass slip (and Novice Course Pass slip if for a Novice licence) to Subscription Services Ltd (SSL), together with the fee. See Q38. The fee is currently GBP15 for all classes of licence, but Novice licence holders under 21 years old are not required to pay the fee. The licence can take 4 to six weeks to be delivered. The licence will show your callsign. You also receive a booklet giving information about what your licence permits you to do.

9. What is a callsign ?

A callsign is a unique identifier for you whilst transmitting. Callsigns are issued to an individual radio amateur with their first licence document. A callsign consists of a mixture of letters and numbers from 3 characters long. In the UK, the shortest callsigns are 4 characters long. Holders of the Radio Amateur Licence in the UK have callsigns with the prefix 'G'. Holders of Novice Licences have the callsign prefix '2'. Sample prefixes for other countries are F;France, D;Germany, I;Italy, N,W,A;USA, VK;Australia. Prefixes are allocated by the International Telecommunications Union, an agency of the United Nations. There are secondary prefixes in the UK to determine which part of the UK the licence holder is operating from:

Radio Amateur Licence Novice Licence
England G 2E
Scotland GM 2M
Wales GW 2W
Northern Ireland GI 2I
Isle of Man GD 2D
Jersey GJ 2J
Guernsey & GU 2U
dependencies

In the case of club licences, a different secondary prefix may be used:

England GX
Scotland GS Novice licences may not
Wales GC be used as club licences.
Northern Ireland GN
Isle of Man GT
Jersey GH
Guernsey & GP
dependencies

Following the prefix, a UK callsign has a number that determines the class of licence, ie whether it's a class 'A' or class 'B' licence:

Radio Amateur Licence Novice Licence

Class A 0,2,3,4, all plus 0 plus three letters
three letters
2,3,4,6,8 plus two
letters

Class B 1,6,7,8 all plus 1 plus three letters
three letters

The latest callsigns being issued are in the G0, G7, 2E0, 2E1 series. A valid callsign would be G1PJJ or G3YMD or G2FA. The first one is Class B, the second two are Class A. A valid Novice Class A callsign would be 2E0AAK.

The callsign allocated must be transmitted in accordance with the current licence conditions.

10. What frequencies am I allowed to use ?

The frequency bands allocated to Amateurs are published in the licence conditions booklet that accompanies each licence. The current bands allocated to Radio Amateurs are:

1.810-2.000, 3.500-3.800, 7.000-7.100, 10.100-10.150, 14.000-14.350
18.068-18.168, 21.000-21.450, 24.890-24.990, 28.000-29.700,
50.000-52.000, 70.00-70.50, 144.0-146.0, 430.0-440.0, 1240-1325,
2310-2450, 3400-3475, 5670-5680, 5755-5765, 5820-5850, 10000-10500,
24000-24250, 47000-47200, 75500-76000, 142000-144000, 248000-250000.
All frequencies in MHz. Class B Licence holders are restricted to transmitting on bands above 30MHz. Geographical restrictions apply to

the 430-432MHz sub-band.

The current bands allocated to Novices are:

1.950-2.000, 3.560-3.585, 10.13-10.14, 21.100-21.149, 28.060-28.190,
28.225-28.500, 50.0-52.0, 432.0-440.0, 1240-1325, 10000-10500.
All frequencies in MHz. Class B Novice Licence holders are restricted
to transmitting on bands above 30MHz.

Bands from 1.8MHz to 30MHz are known as HF (High Frequency)
Bands from 50MHz to 146MHz are known as VHF (Very High Frequency)
Bands from 430MHz to 1.3GHz are known as UHF (Ultra High Frequency)
Bands above 1.3GHz are in the Microwave region and are also known as
SHF (Super High Frequencies)

11. What can I transmit ?

The transmission types available depend only on whether there's
sufficient bandwidth on the band you intend to use for that
transmission. You would not try to transmit a 6MHz television signal on
a 2MHz wide band. Otherwise, all phone, Morse, television, fax and data
modes are permitted on all bands. There is, however, general agreement
in the UK on use of particular modes on each band.

So far as the content of the transmission is concerned, this does
depend on the mode in use. You may not transmit any copyrighted
material. You cannot (except under emergency conditions) transmit a
message that is not from another amateur, however you cannot
store-and-forward any message that is not from yourself. This area of
licencing is not easy to explain in few words and the licence booklet
should be read. See Q33 in connection with those who may transmit at
your station and Q30 for restrictions regarding packet-radio messages.

For Novice Licence Holders, the restrictions are slightly more severe
and several bands are only available for Morse transmissions. Novices
are not permitted to use some bands at all, notably 144MHz.

See Q32 for the band-plans.

12. How do I know what to do ?

Hopefully in preparing for the exam, you've read and learnt the licence
conditions and operating procedures. The best way of learning though is
to listen to other amateurs operating. Hopefully you can listen whilst
you're learning so when the licence arrives you'll be ready to transmit
straight away. In any case, if you get it wrong 'on the air' then some-
one will correct you.

13. Where can I buy a radio ?

Many larger towns have shops that stock Radio Amateur equipment. Many
advertise in the Amateur Radio press. Local amateurs will advise on the
better local emporiums but a lot of business is mail-order, with the
usual caveats. You do not usually need to take your licence along when

purchasing a radio, but some suppliers are asking for proof of being licenced before selling you a radio, particularly higher-powered models. An alternative means of comparing and buying radios is at a Rally. These are held all over the country between March and October usually, with a few just before Christmas. A Rally is a way that Radio Amateurs can meet and talk, and there are usually many trade stands from local and national dealers. There's often a bring-and-buy where you can find a second-hand bargain. Rally information is published in all the Radio magazines and also broadcast on the RSGB's news service each Sunday, GB2RS (see Q37). Lists of Rallies are distributed on the packet-radio BBS network by G6CZV addressed to RALLY@GBR.

14. Can I build a radio ?

Yes, and you could save yourself lots of cash. Whether you want to try a design of your own, use a published design and etch your own boards or build a kit from one of the UK kit suppliers, there is no restriction on 'home-brew' - not yet. If you're not used to building, don't try and build a transmitter first, try out your skills on a receiver and see how you cope. You'll find many of the kit suppliers at rallies. Many of the magazines feature construction projects, often tied to a specific kit supplier.

15. Can I modify a radio ?

Yes. There is a lot of ex-commercial and ex-emergency services radio equipment around and plenty of information on modifying it to make it work on amateur frequencies. But, not all of it is suitable, so ask before you buy. Also, there is a restriction on converting former CB (27MHz) equipment for use on 28MHz and a permit is required from the Radiocommunications Agency.

16. I have a UK licence, can I use it abroad?

Holder of a full UK licence can use it abroad, subject to restrictions, holders of novice licences can't. If you intend to operate within Europe, then the country you're operating from may have signed the CEPT agreement, in which case no additional permission is needed to operate there, simply sign as (eg. for France) F/own-call . Check on your own licence validation document which countries have signed the CEPT agreement. Operating in any country that is not a CEPT signatory means obtaining advance permission from that country's authorities to operate there - normally well in advance of your trip. The RSGB can offer advice and application forms for most countries that have a reciprocal licencing agreement with the UK. The relevant embassy/high commission or consulate can also offer advice. Be aware that amateur radio is illegal in some countries. It is also illegal in some countries to even transit the country carrying radio transmitters without the appropriate licence. In all cases, check.

17. What is a CEPT licence ?

A CEPT licence is a licence issued by a country that is a signatory to the CEPT agreement no. T/R 61-01. CEPT is the European Posts and Telecommunications Committee and sets standards between European countries. Those countries that have signed the agreement include: Austria, Belgium, Switzerland, Germany, Denmark, Spain, France, Liechtenstein, Greece, Hungary, Italy, Irish Republic, Luxembourg, Monaco, Netherlands, Norway, Sweden, Finland, Czech Republic, New Zealand, United Kingdom. Under the terms of the agreement, holders of a CEPT class 1 licence, are allowed to use, without further formality, all amateur bands in the country being visited that are also permitted under the terms of the licence-holders own licence. Holder of a CEPT class 2 licence are restricted to bands above 144MHz that are available in the licencee's own country and the country being visited. If you have a UK licence, look at your licence validation document. At the top you will see a "CEPT equivalent class", this will be 1 for a class A licence, 2 for class B.

18. I have a CEPT licence, how do I sign in the UK ?

Holders of a licence issued in accordance with the CEPT (European Post and Telecommunications Committee) Recommendation T/R 61-01 may operate in those countries that have verified the Recommendation. The UK is a signatory and amateurs with CEPT licences can operate as G/own-call in England, GW/own-call in Wales etc. without formality. The bands available are restricted to those which are permitted in this country, if the licence holder is permitted to use them in their OWN country. A class 2 CEPT licence holder is restricted to 144MHz and above.

19. I want to operate in the UK, I don't have a CEPT licence.

If your licence is not marked as a CEPT licence, then you need to apply to the Radiocommunications Agency for a temporary reciprocal licence. There are reciprocal agreements with many countries, if in doubt ask your own licencing authority or national society. Obtain a reciprocal licence application form from your own national society or direct from the Radiocommunications Agency and return it with proof of your licence and the fee of (currently) GBP15. Allow 8 to 12 weeks if you need the licence returned to your home address, 4 to 6 weeks if it is to go to the address you'll be staying at in the UK. You sign as G/own-call in England, GM/own-call in Scotland etc. You are bound by the UK licencing conditions and will receive a copy of the licencing booklet with the reciprocal licence. The temporary reciprocal licence is valid for 12 months. You can contact the Radiocommunications Agency on 071 215 2150 (+44 71 215 2150).

20. What is morse ?

Morse is the simplest means of transmitting a recognisable signal between stations. Morse is, at its simplest, turning on and off the transmitter in a manner that represents letters or numbers, according to the Morse Code. Morse, by its nature, is likely to work between two stations when all other modes fail due to interference or sheer lack of signal strength, given the narrow bandwidth required and the low

signalling rate, although no mode is perfect.

21. Where do I learn morse ?

There are broadcasts on the HF, VHF and UHF amateur bands that are designed to bring you from a low level to a good level of morse, but these assume that you at least know the 'code' first. These broadcasts in the UK are co-ordinated by the RSGB (0707-659015) and are operated under the callsign GB2CW. There are other HF broadcasts world-wide and the most prominent of these are by the ARRL (American Radio Relay League) under the call W1AW. Another way of learning morse is from an instructional tape. These tapes are available from the RSGB and the G-QRP club (see below) amongst other sources.

22. Do I need to learn morse ?

If you have no intention of transmitting on the HF bands (below 30MHz) then no, you don't need morse. The main purpose of morse presently is to provide access to the HF bands, morse is a requirement of the ITU and is mandatory in most countries' licencing for HF licences. Above 30MHz morse may still be useful if you want to use meteor-scatter (MS) or use some satellites. If you want to use the HF bands, then a Class 'A' licence is required. If you already have a Class 'B' licence then you need to take either a 12 words-per-minute morse test (for an Amateur Licence 'A') or a 5 wpm morse test (for a Novice Licence 'A'). Additionally a holder of an Amateur Licence 'B' can take the 5 wpm morse test and be issued with a Class 'A' Novice Licence as well as their Class 'B' Licence. The morse tests are organised by the RSGB on behalf of the Radiocommunications Agency. Tests are held in most areas 3 or 4 times a year, depending on demand, as well as at some major rallies.

23. What is a repeater ?

Repeaters are to be found across the country, mainly on 145MHz and 433MHz. A repeater is an un-manned station that will retransmit on its output frequency any signal heard on its input frequency that satisfies certain conditions. On the 2m band (144-146MHz) repeaters are found on the following frequencies:

Output (MHz) Input (MHz) Channel no.
145.600 145.000 R0
145.625 145.025 R1
145.650 145.050 R2 The input frequency
145.675 145.075 R3 is always 600kHz below
145.700 145.100 R4 the output frequency.
145.725 145.125 R5
145.750 145.150 R6
145.775 145.175 R7

On the 70cm band (430-440MHz) repeaters are found on the following frequencies:

Output (MHz) Input (MHz) Channel no.
433.000 434.600 RB0
433.025 434.625 RB1
433.050 434.650 RB2
433.075 434.675 RB3
433.100 434.700 RB4
433.125 434.725 RB5 The input frequency
433.150 434.750 RB6 is always 1.6MHz above
433.175 434.775 RB7 the output frequency.
433.200 434.800 RB8
433.225 434.825 RB9
433.250 434.850 RB10
433.275 434.875 RB11
433.300 434.900 RB12
433.325 434.925 RB13
433.350 434.950 RB14
433.375 434.975 RB15

It's worth pointing out that repeaters cost money to run and the RSGB does not contribute to their costs, in fact it no longer pays for the licences. Repeaters are paid for by local groups and clubs. If you use a repeater, ask on the repeater how you can join the group.

24. How do I use a repeater ?

With your VHF or UHF transceiver, change the displayed frequency to the output frequency of the repeater you wish to use, there is insufficient space here to list all the repeaters available. Locate the button/function on the transceiver to enable repeater or duplex mode, where there is an option for either positive or negative transmit shift then make sure that it is set to negative for the 2m band and positive for the 70cm band. Refer to Q23 for the exact frequencies.

To use a repeater, key the PTT (push-to-talk), send a short burst of 1750Hz tone (tone-burst), keep the PTT keyed and speak for a few seconds (but not whilst the tone-burst is being sent), release the PTT and you should receive a pip or some other indication that your signal was retransmitted by the repeater. The 1750Hz tone-burst is required only when the repeater is not in use and on some transceivers is automatic when repeater/duplex mode is enabled.

Some repeaters have the facility to accept CTCSS instead of a tone-burst. If a transceiver is capable of sending CTCSS tones then this should be used instead of a tone-burst where possible. See Q25.

25. What is CTCSS (Tone Squelch) ?

CTCSS stands for Continuous Tone-Coded Squelch System. The principle is that a sub-audible tone is continuously transmitted in addition to the speech (or other) signal. The tones used are below the normal hearing frequency range and do not interfere with the other signal. In the UK these tones may be used instead of a 1750Hz tone to access repeaters. The UK has been divided into 23 areas and a particular tone has been

allocated to each area. Those repeaters that support CTCSS will
normally send the appropriate letter (designating the tone frequency)
in morse after the repeater callsign. The tones used are a subset of
those available and are :

Tone letter Frequency (Hz)
A 67.1
B 71.9
C 77.0
D 82.5
E 88.5
F 94.8
G 103.5
H 110.9
J 118.8

Summary: To answer frequently asked questions on amateur radio in
the UK.
Archive-name: uk-radio-amateur-faq
Last Modified: 27-March-1994

uk.radio.amateur Frequently Asked Questions
==

This will be a periodic posting to uk.radio.amateur and rec.radio.info of
UK-specific questions and answers on amateur radio. It is not intended to
be exhaustive, but to point you towards sources of further information
where necessary. I would welcome any constructive views on this FAQ to
ukfaq@topsy.demon.co.uk .

For ease of distribution, the edition of this FAQ posted to Usenet has been
cut into 2 parts.

The latest version of this FAQ is available for anonymous FTP from
ftp.demon.co.uk

Part 2 of 2
----

26. What is packet radio ?

Packet radio is a data communications mode that uses a modified form of
the X25 signalling protocol. Simply put, two packet radio stations that
are within direct range of each-other can establish an error free data
connection, normally at 1200 bits per second (baud). Packet radio
stations may also act as automatic repeaters ('digipeaters') and can
relay other stations' signals. Using packet radio, many bulletin boards
or mailboxes exist to handle messages for those active on packet radio

in their locality, these messages can include 'bulletins' that are open to all and are often distributed across every packet radio bulletin board in the UK, or further afield. Most packet radio is operated in the 2m and 70cm bands.

For a fuller description of packet radio see the digital-faq posted in rec.radio.amateur.digital.misc and available by anonymous FTP from:
rtfm.mit.edu//pub/usenet/news.answers/radio
ftp.amdahl.com//pub/radio/amateur

27. What equipment do I need for packet ?

Life used to be simple, all you needed for packet was a VHF or UHF transceiver (depending on where you lived), a terminal or computer running a terminal-emulation program and a Terminal Node Controller unit (TNC). The TNC contains a microcomputer and controls all communication between the terminal and the remote TNC being connected to. Now cards containing a TNC (or two) are available for the PC & compatibles and other computers. Additionally, there is a system that uses a simple modem, or a TNC acting as a simple modem, with the host computer controlling the communications. Finally there are the TNC's that do not require a local terminal ..... ask an expert.

28. What are the limitations of packet-radio in the UK ?

At first packet was illegal in the UK, or maybe it wasn't. The licence did not make this clear. Now it is an established communication mode and recognised by the RA. This means that they have made a few special arrangements if you want to run packet. Firstly you must send a morse ident to give your full station callsign at least every 30 minutes. And you should send a packet ident every 15 minutes. Next, you may only pass on mail addressed to a specific amateur station, unless you hold a Notice of Variation to your callsign (designated by a GB7... callsign) - in which case you don't need to read this section :-) .

29. I want to leave my packet-radio station unattended.

Providing the commencement of unattended packet-radio operation is logged in the station log then unattended operation may be in the following bands or sub-bands: 50-51MHz, 70.3125MHz, 70.3250MHz, 70.4875MHz, 144-146MHz, 432.6-432.7MHz, 433.6-433.7MHz,1299-1300MHz (excluding Northern Ireland), 2310-2450MHz, 3400-3475MHz, 5650-5680MHz, 5755-5765MHz, 5820-5850MHz, 10000-10250MHz, 10270-10300MHz, 10400-10500MHz 24000-24050MHz and all bands including and above 47000MHz. The position regarding the 70cm band is changing and the latest position should be sought in all cases where the licencee is not certain.

30. Can I use packet to exchange messages with Internet users?

The only messages that may be carried by the packet network are those sent by licenced amateurs. There are no official gateways from packet to Internet in the UK due to the problem of controlling which messages

are from licenced amateurs on the Internet side. This is under review by the RA. There are, however, gateways in the US and elsewhere that will forward internet email from licenced amateurs onto the packet bbs system. It is necessary to register your callsign and email address before using these gateways.

31. What facilities are available in the UK by packet ?

Most user-level packet is at 1200baud with some linking still at 1200baud but moving to 9600baud, or beyond. At this data rate, little more than BBS access is possible although the DX Cluster network for notification of DX is very strong in some areas. TCP/IP (and its related servers) are established in some areas but there is by no means a national TCP/IP network.

31. How do I obtain a .ampr.org IP address ?

There are local co-ordinators assigned to each RSGB region, and in some cases they delegate address allocation further to local co-ordinators. Your nearest BBS sysop will probably know who runs TCP/IP locally - if he doesn't there's a fair chance that activity is so low that you won't find any other operators anyway !

If you have any difficulty, the UK co-ordinator is Paul Taylor, G1PLT (ptaylor@email.meto.govt.uk) . He should be able to put you in touch with your regional co-ordinator.

32. UK Band Plans

Use of the allocated bands in the UK is voluntary to a large extent. Providing your signal remains within the band edges you may transmit using any mode you like, but see the booklet BR68 from the Radiocommunications Agency. The voluntary band plans are as follows:

1.810-2.000MHz (160m)

1.810-1.838 CW only
1.838-1.842 Digital modes (excluding packet radio) and CW
1.842-2.000 Phone and CW

3.500-3.800MHz (80m)

3.500-3.580 CW only
3.580-3.620 Digital modes and CW
3.620-3.800 Phone, CW, SSTV, Fax

7.000-7.100MHz (40m)

7.000-7.035 CW only
7.035-7.045 Digital modes, SSTV, Fax and CW
7.045-7.100 Phone and CW

10.100-10.150MHz (30m)

10.100-10.140 CW only
10.140-10.150 Digital modes

14.000-14.350MHz (20m)

14.000-14.070 CW only
14.070-14.099 Digital modes and CW
14.099-14.101 Beacons
14.101-14.112 Digital modes, phone and CW
14.112-14.250 Phone, SSTV, Fax and CW
14.250-14.350 Phone and CW

18.068-18.168MHz (17m)

18.068-18.101 CW only
18.101-18.109 Digital modes and CW
18.109-18.111 Beacons
18.111-18.168 Phone and CW

21.000-21.450MHz (15m)

21.000-21.080 CW only
21.080-21.120 Digital modes and CW
21.120-21.149 CW only
21.149-21.151 Beacons
21.151-21.450 Phone, SSTV, Fax and CW

24.890-24.990MHz (12m)

24.890-24.920 CW only
24.920-24.929 Digital modes and CW
24.929-24.931 Beacons
24.931-24.990 Phone and CW

28.000-29.700MHz (10m)

28.000-28.050 CW only
28.050-28.150 Digital modes and CW
28.150-28.199 CW only
28.199-28.201 Beacons
28.201-29.200 Phone, SSTV, Fax and CW
29.200-29.300 Digital modes, phone and CW
29.300-29.550 Satellite downlinks
29.550-29.700 Phone and CW

50.000-52.000MHz (6m)

50.000-50.100 CW only
50.100-50.500 SSB and CW only
50.500-51.000 All modes
51.000-51.125 SSB and CW only
51.125-51.410 All modes
51.410-51.830 FM
51.830-52.000 All modes

70.000-70.500MHz (4m)

70.000-70.030 Beacons
70.030-70.250 SSB and CW only
70.250-70.300 All modes
70.300-70.500 FM phone and packet radio

144.000-146.000MHz (2m)

144.000-144.150 CW only
144.150-144.500 SSB and CW only
144.500-144.845 All modes
144.845-144.990 Beacons
144.990-145.200 FM Repeater inputs
145.200-145.600 FM simplex
145.600-145.800 FM Repeater outputs
145.800-146.000 Satellite uplinks/downlinks

430.000-440.000MHz (70cm)

430.000-431.000 All modes
431.000-432.000 All modes - see note
432.000-432.150 CW only
432.150-432.500 SSB and CW
432.500-432.800 All modes
432.800-432.990 Beacons
432.990-433.000 All modes
433.000-433.400 FM Repeater outputs
433.400-434.600 FM simplex and packet radio
434.600-435.000 FM Repeater inputs
435.000-438.000 Fast-scan TV and satellite uplinks/downlinks
438.000-439.800 Fast-scan TV
439.800-440.000 Packet Radio

note to 431-432MHz sub-band: This sub-band is not permitted to be used
within a 100km radius of Charing Cross, London.

1240.000-1325.000MHz (23cm)

1240.000-1243.250 All modes
1243.250-1260.000 ATV, FM TV repeater inputs
1260.000-1270.000 Satellite uplinks
1270.000-1272.000 All modes
1272.000-1291.000 ATV, FM TV repeater input
1291.000-1291.475 FM Repeater inputs
1291.475-1296.000 All modes
1296.000-1296.150 CW
1296.150-1296.800 SSB
1296.800-1296.990 Beacons
1296.990-1297.000 All modes
1297.000-1297.550 FM Repeater outputs
1297.500-1298.000 FM simplex
1298.000-1298.500 All modes
1298.500-1300.000 Packet radio

1300.000-1325.000 ATV, FM TV repeater outputs

[Editor's note: I do not propose to list the band-plans for the other microwave bands, unless asked.]

33. Can anyone use my radio ?

Anyone who holds a current UK-issued licence, or a valid CEPT licence, or a valid reciprocal licence, may use your station for frequencies for which they are licenced under their own callsign. In addition to those listed, a UK Novice licencee, holder of a pass slip from the Radio Amateur's Examination or an Amateur Radio Certificate (who does not hold a licence), or a licenced amateur from any other country, may operate under the station's callsign on frequencies that you are licenced to use providing you are in attendance.

When operating a club station, a message may be transmitted from any person providing it is a greetings message of less that two minutes duration and is sent and received only within: UK, USA, Canada, Falkland Islands or Pitcairn Island.

When using a digital mode, anyone may type the message for transmission.

34. I have a dual-band rig, can I use it as a repeater ?

Some VHF/UHF rigs are capable of acting as a cross-band repeater, operated by carrier-sense. Unless these are licenced as a repeater (with a GB3.. callsign) or being operating by an emergency communications group under a current 'talk-though' permit then they may not be used as a repeater.

35. My neighbour complains he can hear my voice on his television.

This is a case of Radio Frequency Interference and the correct term is 'Electromagnetic Compatibility' or EMC. Where the reasons behind the problem is not clear (and they seldom are), consult one of the many guides to EMC problem-solving. One good source is the ARRL Handbook (published annually by the American Radio Relay League). Another is the Radio Amateurs' Guide to EMC by R. Page-Jones G3JWI (published by the RSGB). Abbreviated advice from the latter volume is to be found in the RSGB Callbook & Information Directory. There is a network of EMC Co-ordinators to give local advice in extreme cases. Details from the RSGB. For those suffering interference, a useful guide is a booklet called How to Improve Television and Radio Reception, published by the Radiocommunications Agency a few years ago. It is now out of print, but many copies are in circulation.

36. I want to take my radio to sea / use it in an aircraft.

Maritime Mobile (/MM) operation has been a part of the UK licence for several years now, previously it was a separate licence. On a vessel that is not yours you must obtain the written permission of the vessel's master before installing or using a transceiver (this includes cross-channel ferries). The master may insist that you observe radio

silence at times and this must be done. In international waters, only those bands that are permitted for the ITU region being visited may be used. In non-UK territorial waters, be aware that amateur activity in harbours may not be permitted. If in doubt, seek advice from that country's authorities before travelling.

Aviation mobile in the UK is not permitted and the licence is quite specific about this. If you are carrying a transceiver by air make certain you can switch it on to satisfy the airport security then switch it off and leave it off.

37. The Radio Society of Great Britain (RSGB).

The RSGB is the national society representing amateurs in the UK to our licencing body (The Radiocommunications Agency). Many people have many views on the RSGB and it has often been criticised, but it's the only body of it's kind that we have :-)

The RSGB's address is: RSGB
Lambda House
Potters Bar
Herts
EN6 3JE
U.K.

The main telephone number is 0707 659015 (+44 707 659015)
The fax number is 0707 645105 (+44 707 645105)
They do not have a reliable (or easy) e-mail connection to HQ (they use BT Gold :-( ) but several RSGB Committee members are active on Internet and/or packet-radio and their details will be added to this FAQ as and when they are known.

The RSGB is the main publisher of amateur radio books in the UK, they also publish a monthly magazine for members called 'Radio Communication', more commonly known as 'RadCom'. The editorial team for RadCom can be contacted on 0707 659015, fax 0707 649503.

The RSGB broadcasts a weekly amateur radio news summary every Sunday under the callsign GB2RS. This is broadcast nationally on 3.640, 3.650, 3.660, 7.0475MHz. Local broadcasts are on 51.530, 144.250, 145.525MHz. Times vary, see the Callbook and Information Directory for full details. The text is copied to packet-radio (NEWS@GBR) and to Usenet by Ted Batts G8LWY.

38. The Radiocommunications Agency (RA).

The RA is the licencing body in the UK. Any queries about licencing that cannot be otherwise dealt with should be directed to the RA. Their address is: Radiocommunications Agency
Room 712
Waterloo Bridge House
Waterloo Bridge Road
London

SE1 8UA
U.K.

Their telephone number for enquiries is 071 215 2150 (+44 71 215 2150).

The RA publishes a number of advice leaflets and information sheets and these are generally free. These can be obtained by contacting the RA's Information and Library Service at Room 605 in Waterloo Bridge House. The telephone number is 071 215 2072 (+44 71 215 2072), fax 071 928 4309 (+44 71 928 4309).

For queries over licence renewals, contact Subscription Services Ltd (SSL): Radio Licencing Centre
Subscription Services Ltd
PO Box 885
Bristol
BS99 5LG.

Their telephone enquiry line is open Monday to Saturday 0830 to 2200hrs on 0272 258333. There have been many reported problems with licence renewals recently and this should be borne in mind.

39. Local Clubs.

Probably the best way to meet local radio amateurs is at the local club meetings. These are too numerous to list here but once again a full list is found in the Callbook and Information Directory, from the RSGB. Many clubs also feature in the "What's On/Meetings" section of local newspapers and the various amateur radio magazines.

40. Specialist Clubs.

For those with an interest in a specialist branch of amateur radio, then these clubs and societies tend to be very useful:

Satellites: AMSAT-UK

AMSAT-UK
94 Herongate Road
Wanstead Park
London
E12 5EQ
081 989 6741 (+44 81 989 6741)
fax 081 989 3430 (+44 81 989 3430)
Internet: R.Broadbent@ee.surrey.ac.uk
Compuserve: 100024,614 Ron Broadbent

AMSAT-UK publish an excellent magazine "Oscar News"
for those with an interest in amateur satellites.

Data: The British Amateur Radio Teledata Group - BARTG

Peter Adams
Membership Secretary

BARTG
464 Whippendell Road
Watford
Herts
WD1 7PT
Packet: G6LZB@GB7BST

BARTG publish a magazine "Datacom" aimed at all aspects of data communication, RTTY, Amtor, packet and the newer modes.

Television: The British Amateur Television Club - BATC

Dave Lawton
Membership Secretary
BATC
"Grenehurst"
Pinewood Road
High Wycombe
Bucks
HP12 4DD

The BATC publishes a useful magazine "CQ TV" covering all aspects of amateur television with many projects.

Low Power: The G-QRP Club

The G-QRP Club
St. Aidan's Vicarage
498 Manchester Road
Rochdale
Lancs
OL11 3HE
Tel/fax: 0706 31812 (+44 706 31812)
Internet: g3rjv@gqrp.demon.co.uk

The G-QRP Club is organised by the Rev. George Dobbs, G3RJV, a well-respected author of amateur radio articles. The Club publishes a magazine "Sprat" aimed at the home constructor and QRP operating in particular. It is a very readable magazine. The Club is also a prolific book producer, most of which are available from the RSGB.

Listening: International Short Wave League - ISWL

Mrs E. May
Hon. Secretary ISWL
10 Clyde Crescent
Wharton
Winsford
Cheshire
CW7 3LA

The ISWL caters for those with an interest in receiving
on both the amateur and broadcast bands. It publishes
a magazine "Monitor".

Of course, there are many more clubs than those listed above but these
are the clubs primarily dealing with branches of amateur radio.

41. Commercial Magazines.

The RSGB's RadCom is not available in newsagents as it is a members'
journal. Those that you will find in the newsagents are:

Practical Wireless
Short Wave Magazine
Ham Radio Today

All are published monthly.

42. Internet news groups

For UK-specific news, try uk.radio.amateur - this FAQ is intended for
that newsgroup.

The main Usenet groups for radio-related topics are listed below. The
policy group in particular has a heavy US bias.

rec.radio.amateur.antenna Antenna theory/techniques
rec.radio.amateur.digital.misc Packet radio etc
rec.radio.amateur.equipment Production amateur radio hardware
rec.radio.amateur.homebrew Amateur radio construction
rec.radio.amateur.misc General news
rec.radio.amateur.policy Radio use & regulation policy
rec.radio.amateur.space Amateur radio transmissions through space
rec.radio.broadcasting Local area broadcast radio
rec.radio.info Informational postings
rec.radio.noncomm Non-commercial radio
rec.radio.shortwave Shortwave radio enthusiasts
rec.radio.swap Offers to trade and swap radio equipment

43. Other FAQs

As stated elsewhere, this FAQ is not exhaustive. You may like to check
out the FAQ's on amateur radio that are posted regularly in
rec.radio.info and rec.radio.amateur.misc, obviously having regard for
the non-UK slant to many topics. The main ham-radio FAQ (US in origin)
and ham-digital-faq are available by anonymous FTP from:
rtfm.mit.edu//pub/usenet/news.answers/radio
ftp.amdahl.com//pub/radio/amateur

44. Is the UK callbook available on disc/CD-ROM ?

The information available on UK amateurs is much more restrictive than
that on US amateurs, due to differing legislation and attitudes to
public information. However, some of the information in the Callbook
published by the RSGB is available. This does not appear to include

callbook entries where postcode (zip-code) information only is given.

Ian Hampson G1DFT (ian@ainsdale.demon.co.uk) offered in uk.radio.amateur:
I've seen a couple of requests for the UK callbook on disc. Well, it's available on 2 HDD PC floppies from me if anyone wants it. Send me two blank disks and an SAE [sufficient IRC's outside the UK - Editor] and I'll do you a copy. Mark your envelope - 'callbook'. The callsign files come with an excellent PD search routine.

And John Heaton, in rec.radio.amateur.misc said:
For the last few weeks or so a copy of the UK Radio Amateurs Callbook 1994 has been passed around the UK amateur community. What I have done is to put the callbook up on our HTTP server :
http://www.mcc.ac.uk/htbin/callbook
This database holds just over 49000 UK amateurs

This information may also be available on one of the US-originated CD-ROMs but I have no details.

45. Caveat.

A lot of information for this FAQ has been taken from the licencing booklet BR68 and the RA's information sheets. The licencing information was probably correct at the time I copied it, but do not take anything as being authoritative. The licence is constantly under review and this FAQ could easily be out of date. If in doubt, check!

46. Credits.

The following have contributed to this FAQ:

Adrian Godwin G7HWN
Mick Bowers G7NOR

3275. 10M indoor problem.

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-27 18:14:16 UTC
From: destree@unr.edu
Message-ID: <1994Mar27.181416.165@news.unr.edu>
Source record: 269477

I recently bought a HTX-100 (no equipment flames please...buying the FT-990 would keep me from continuing school), and have set it up with a "V" type 1/2 wave indoor antenna. I have not been able to talk to anyone from my apartment yet. However, I have had good results (when the band is in) from a measly 1/4 wave mag mount on my car.

The building I live in is made of stucco, with (I'm reasonably sure) chicken wire in the walls. Most stucco buildings I've seen have this wire in the walls. I am curious if the wire is acting as an attenuator. If anyone has had a similar experience, let me know.

Yes, it is possible for me to put the antenna outside. However, rather than having people lining up at my door complaining of TVI, I wanted to keep everything indoors.
Thanks!
Louis

[867]

The following is a QST

The FCC names a well known ham to head up its new task force on personal communications services and a missing young ham has returned home.

HALLER TO HEAD PCS TASK FORCE

One of the nations best known and most respected ham radio operators has been selected to guide all personal communications into the next century and beyond. This, with the naming of FCC Private Radio Bureau Chief Ralph Haller, N4RH to head the newly created Commission task force on personal communications services, better known as the PCS.
The Commission says that the task force will provide a focal point for all of the PCS issues currently before it and those yet to surface. The group will would work with all of the FCC's bureaus and offices that are involved in PCS issues. It will also be responsible for assuring consistency between policies and rules for narrow-band and wide-band PCS services.
FCC Chairman Reed Hundt says that he choose Ralph Haller to head up the task force because he is confident that under his leadership the group will guide the Commission in the timely development of a comprehensive regulatory framework for the PCS.
Other members of the task force include FCC Chief Engineer Tom Stanley, Robert Pepper who is Chief of the Office of Plans and Policy, Donald Gips the Deputy Chief of Office of Plans and Policy and FCC Chief Economist Michael Katz.

CLINTON NAMES CHONG TO FCC

President Clinton has selected San Francisco telecommunications lawyer Rachelle B. Chong to fill one of two vacancies at the Federal Communications Commission. Chong, a 34 year old Republican, would become the FCC's first-ever Asian-American commissioner if confirmed by the Senate. She would replace Sherrie Marshall, whose seat at the FCC has been open for nearly a year. Chong's term would last through mid-1997.

President Clinton also intends to nominate Susan Ness, another communications lawyer as a Commissioner. Ness has worked as a senior lender and as group head in the communications industries division of American Security Bank in Washington. During the mid-1970s, she was assistant counsel to the House Banking Committee. She holds a law degree from Boston College Law School and a master's degree in business administration from the Wharton School.

FCC RFI SURVEY

The FCC has released the results of a just completed telephone interference survey and it says that going QRP makes little difference in telephone related RFI.
Thirty-five FCC field offices each picked three random cases of telephone interference on record and then visited the scene. The transmitting stations included 47 Citizens Band; 27 Amateur; 23 AM broadcast; 10 FM broadcast; and one international broadcast station.
At the location experiencing interference, the FCC's Field Operations Bureau personnel would first test the telephones on site, and then test their own RFI immune telephones, as well as several commercially available filters. In all, some 241 different telephones were tested.
Among the FCC's conclusions was that transmitter power did not seem to be a significant factor. In fact, transmitters that ran 10 watts or less caused significant telephone interference in one-third of the cases. The FCC also said that add-on filters provided a cure to the interference problem in only one-third of the incidents investigated.
The study did however conclude that manufacturers can design telephones. The FCC says that it hopes the survey will encourage affected parties to productively address and resolve this problem, but stopped short of ordering the manufacturing community to produce only RFI immune telephones.

SPECTRUM AUCTION

The Federal Communications Commission has taken a first step toward setting the ground rules under which businesses can bid for certain chunks of the airways. On March 8th, the FCC adopted set of so called generic rules for auctioning radio frequencies for a variety of new services, including the next generation of mobile telephone service called personal communications service. The rules will allow several auctions to be conducted at the same time, require $2,500 as a minimum up-front payment for parties to participate in the auction, set deadlines for payments on winning bid and also set aside a portion of the frequencies to be bid on by individuals or groups composed primarily of women, minorities, rural telephone companies and small businesses. Companies obtaining personal communications services licenses

will be able to offer consumers the next generation of mobile phone service, in which the number travels with the phone's owner.
The FCC says that it is exploring various options to submit bids. This includes electronic filing as well as oral and paper bids. A more detailed set of rules for specific services will be decided later. There are no plans now toward any reallocation by auction of the spectrum used by radio amateurs or other communications hobbyists.

WZ1W FOUND

A missing Massachusetts teenager, whose been the object of a nationwide search involving amateur radio, has been found. Nathan A. Taylor, WZ1W, who disappeared in August, was found March 8th in southeast Texas. That's where according to a friend of Taylor's family Nathan was taken into custody by federal authorities.
After nearly seven months, fourteen year old Nathan A. Taylor, is back in his home state of Massachusetts. Paul Topolski, N1IPG, is a friend of the Taylor family.

"He has trouble socializing with his piers and consequently he really didn't want to go back to school." Paul Topolski, N1IPG.

Nathan became heavily involved with computers. That according to Topolski triggered Nathan's actions.

"There's quite an underground network of computer operators on the bulletin boards and so forth. He got involved with the wrong group and consequently enticed into leaving home." Paul Topolski, N1IPG.

Nathan disappearance lead to fears that he was in the company of a man who has a known criminal record. That suggestion was raised after police viewed files on Nathan's computer system. For Nathan's parents in Gardner, Massachusetts the next several months would be filled with anxiety.

"All I know is what his parents have told me about a bus trip from Gardner through Memphis and then that was the last time anybody had seen him. The bus driver in Memphis remembered seeing him and then that was it, he appeared to jump off the bus at that time. He turned up in Houston, Texas and one evening his parents called me and consequently informed me that he had been arrested by the FBI. He is now back in the Gardner area." Paul Topolski, N1IPG.

Topolski says Nathan still has problems to work out.

"He seems to have calmed down quite a bit too." Paul Topolski, N1IPG.

The last several months have been extremely hard from Nathan Taylors family members. Now they can rest easier as well. Nathan's close ties to ham radio led to a nationwide plea on amateur radio packet systems. Topolski contacted ARRL Section Managers in Texas and Tennessee for assistance. He sent flyers to amateur radio clubs as the part of the effort to locate Nathan.

HI SEAS RESCUE

Two men rescued from a sinking boat in the Gulf of Mexico credit Amateur Radio for saving their lives. Larry Hooker, KB5ZNY, of Thaxton, Mississippi, and his sailing partner, Rett White, were returning from Honduras on Hooker's 35 foot sailing vessel "Off The Hook," when they ran into an unexpected storm and high seas.
Hooker had been in contact with his friend Randall O'Brian, KD5ZH, of West Point, Mississippi, since hoisting anchor on February 6th. The two were keeping regular schedules on 80, 40, and 20 Meters and O'Brian was the first to learn of their difficulties and eventually contacted the US Coast Guard.
O'Brian continued to help provide communication, along with the Coast Guard, who came up on 3.862 MHz.
On March 4th, Hooker and White were taken aboard the Coast Guard cutter Cushing. Their boat was put under tow but subsequently sank.
Hooker had visited his daughter, Tina, KB5YNN, a missionary with Global Outreach in the northeastern part of Honduras. This is an area accessible only by air or sea.

AMSAT NET ON GALAXY 3

Satellite users may be interested in an experiment being conducted in the Houston, Texas area. The group there is uplinking the Houston Area Amsat Net, heard locally on the 147.10 FM repeater, to the Galaxy 3, communications satellite Channel 17, on the 5.8 Mhz audio subcarrier of the Shop-At-Home Channel. The net is carried in realtime on Tuesday evening, from approximately 10 PM Central Standard Time until completion. This is an experiment but could be continued on a regular basis if interest is sufficient. Send reception reports to Craig Davidson, WD5BDX by packet or direct to his callbook address.

DELPHI

Delphi, a national bbs-type information service and Internet gateway has announced the opening of a special interest group dedicated go radio users in general, and Ham Radio operators in particular. During years past, Ham Radio was supported as a sub-topic on Delphi as part of the Delphi Hobby SIG. Through the efforts of Marty Goodman, KC6YKC and Andy Eddy, WB1FEV Amateur Radio has at last been given a separate special interest group of its own on Delphi.

During its first week of operation beginning March 2nd, this SIG has been able to offer a library of over 300 groups of files for downloading and an active forum. Also in the first week about 30 messages posted every day, with over 300 Delphi members visiting this forum. Those interested in this new SIG should contact Delphi services for more information.

1994 INTERNATIONAL DX CONVENTION

In DX, word that the 1994 International DX Convention is being held at the Holiday Inn, Plaza Park, Visalia, CA, April 15th to the 17th. Friday and Saturday night will see hosted cocktail parties plus a Sunday DX Breakfast and Saturday Night Banquet featuring the 3Y story. The address for information and registration is Don Bostrom, N6IC, at 4447 Atoll Ave., Sherman Oaks, California 91423.

ROBERTS TO SPEAK ARRL SW DIVISION CONVENTION

The man who has developed several high tech motorcycles will be the banquet speaker at the 1994 ARRL Southwestern Division Convention scheduled for later this year. Newsline recently got a call from Division Director Fried Heyn, WA6WZO who told us that its going to be a special night with inventor Steve Roberts N4RVE. Roberts is best known for his development of Behemoth a super high tech motorcycle with on-board computers and ham radio gear. Roberts will not only be speaking at the banquet. He also has promised to bring along one of his super bikes for everyone to see. The 1994 ARRL Southwestern Division Convention is slated for August 26th through the 28th in San Diego. The grand banquet will take place Saturday night August 27th with film maker Dave Bell, W6AQ as master of ceremonies.

DAYTON AWARDS FOLLOW-UP

The 1994 Dayton Hamventions Special Achievement Award goes to Russ Kroeker, N7HGE of Kent, Washington for his efforts in implementing the Evergreen Intertie repeater network in the northwest U.S. and British Columbia. Mr. Kroeker was honored, but also credited many others.

"It is a great honor and I think that the amateur radio society will be really delighted to hear that the time that they spent investing in it, a lot of members have invested their money to help put the equipment in, and a lot of their time Larry Babcock, WB7USL put a lot of time in, Mark La Combe, KF7II. These guys really, I think will be really happy to hear that the work they put in is getting recognized, in a national way, and it is a great honor for all of us. We just thank the lord that you folks did choose us." Russ Kroeker, N7HGE.

Mr. Kroeker will receive his award at the Hamvention Banquet at the Dayton Convention Center located in downtown Dayton, Ohio

Saturday evening April 30th.
More on the upcoming 1994 Dayton Hamvention next week.

For this week, that's all from the Amateur Radio Newsline.
You can write to us at P.O. Box 463, Pasadena, CA 91102.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z MARCH 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 MARCH AND FORECAST UP TO 30 MARCH
No warning is current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 088/032

1B. SOLAR FORECAST
28 March 29 March 30 March
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 088/032

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 26 March
Learmonth 09 2212 3233
Fredericksburg 05 09
Planetary 08 09

Observed Kp for 26 March: 2233 2322

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Mar 10 Quiet to unsettled.
29 Mar 15 Mostly quiet to unsettled, with brief active active
periods possible.
30 Mar 25 Mostly quiet to unsettled, with brief active active
periods possible.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Mar normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Mar normal normal normal
29 Mar normal normal fair
30 Mar normal fair-normal poor-fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 10-20% enhanced 00-08UT and from 17UT onwards, and otherwise near predicted monthly values. Spread F occurred 13, 15 and 17UT.

Observed T index for 27 March: 64

Predicted Monthly T Index for March is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
28 Mar 55 Mostly near predicted monthly values, with occasional enhancements of 15-30%.
29 Mar 50 Near predicted monthly values.
30 Mar 45 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Sporadic E layer was observed throughout most of yesterday. Similar conditions are expected today, with night-time Spread F also possible. MUFs at Townsville were generally near predicted monthly values, while Hobart MUFs were closer to those observed at Sydney.

Hi all,

A good friend of mine (lives in India) requested
the OWNERS and SERVICE manuals for the following
HAM equipment:

Transmitter (Hallicrafter)
Model: HT - 44

Power Supply (Hallicrafter)
Model: PS 150-120

Receiver (R L Drake Co.)
Model: 2-B Communication Receiver

I would be grateful if someone emails me the
numbers I should call, or any other relevant details.
If I am posting to the wrong group -- APOLOGIES!!

Thanks,

Sashi Obilisetty

FO-20: The following is the current schedule for transponder operations:
ANALOG MODE:
23-Mar-94 7:52 -to- 30-Mar-94 8:15 UTC
6-Apr-94 6:45 -to- 13-Apr-94 7:10 UTC
20-Apr-94 7:35 -to- 27-Apr-94 7:55 UTC
11-May-94 6:54 -to- 18-May-94 7:20 UTC
Digital mode: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

MIR: The packet call for MIR is R0MIR-1 and the operating frequency is
145.550 MHz. The crew usually has the Personal Messaging System
(PMS) running. If you hear voice operations ask for Victor, Yuri, or
Valeri. [VK3DFI]

AO-27: AMRAD-OSCAR-27 (AO-27) is up and going, and is said to be working
well. It is in popular use in Europe. The 436.800 MHz FM down-
link can be heard on a hand-held. Uplink is 145.850 MHz. It is
said to be only active in daylight passes. [G3IOR]

UFO: We have a UFO on 145.592 MHz sending data. It was first heard by
G3JQI at 18:50 UTC "dopplering" down until 18:55 UTC LOS on
16-MAR-94. [G3IOR]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly
OSCAR status reports. If you have a favorite OSCAR which you work on a

regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

3283. RTTY help...

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 04:01:45 UTC
From: mgomez@mail.sas.upenn.edu
Message-ID: <2n5kr9$ari@netnews.upenn.edu>
Source record: 269335

HI there. I have a problem with my RTTY station. First of all,
here is the setup that I am running: Kenwood 940-s, PK232MBX and PC
Pakratt v 1.06, IBM XT. Now the problem. When I send out the type, it
echoes back to me jibberish. The characters that I send out are sometimes
deleted, but almost always backwards or inverted. I am told by other
stations that the type I send out is perfect. It is sent just as I typed
it, but what I see is all jumbled. Please, please, please, can somebody
help? I also have the same problem with AMTOR. Sheesh...
Tnx fer the help!!

Matt (AA3FQ)
The U of P ARC (N3KZ)

3284. World Wide Web Sites wanted!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 05:01:40 UTC
From: wy1z@netcom.com
Message-ID: <wy1zCnCzAs.Mor@netcom.com>
Source record: 269336

I am looking for all pointers to Hypertext sites (World Wide Web sites).
I know there is a UK callsign server available via WWW.

What else is there?

Thanks much!

PLEASE PLEASE e-mail direct if possible.

Scott

We also have reflectors for:

Amateur Radio Newsline (newsline-list)
ARRL Official Bulletins (w1aw-list)
ARRL Letter (letter-list)
KY1N VEC listing (Local Boston area VE sessions - ky1n-list)

And we have interactive lists:

barc-list (local Boston-area stuff)
barc-races (again, local)
fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

73,
Scott, WY1Z, co-moderator
Phil, K9HI, co-moderator

P.S. All ARRL bulletins are archived on the anonymous FTP site of
oak.oakland.edu in the Boston Amateur Radio Club FTP area:
/pub/hamradio/w1aw-list/

P.P.S. Amateur Radio Newsline is now also being archived, too:
oak.oakland.edu:/pub/hamradio/docs/newsline/

3286. Buying an HT -- Advice Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 06:59:32 UTC
From: mrw13@bonjour.cc.columbia.edu
Message-ID: <2n5v8k$6dv@apakabar.cc.columbia.edu>
Source record: 269338
Cross-posted to: rec.ham-radio,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I am interested in purchasing an HT would like some advice as to what are good models and the costs I am likely to run into. I plan on also using the HT as a scanner, so it must be able to pick up local police, fire, etc. as well as aircraft frequencies. I understand many HTs can get these frequencies but they need to be "modified" before hand, about how much does this cost? I have heard of dual-band HTs but am not totally sure as to what this means -- any helpful comments? One other consideration, I guess I might as well get a fairly powerful model as well (5 watts?) -- additional options (like getting cellular frequencies, a keypad with hundreds of features are nice, but not necessary. Where is the best and cheapest place to get such equipment? Also willing to buy a used model. Please email any responses.

Thanks in advance,

Marc Wollemborg
<mrw13@columbia.edu>

3287. Radio Amateurs on USENET List Mar 1994 Part 1 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 07:26:08 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Mar28.1@ve6mgs.ampr.org>
Source record: 269342
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part1
Last-modified: $Date: 94/25/28 00 25$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
First part contains primarily European calls with US call district 0.

The index of parts:
Part 1 contains 4x1bq through n0zyc
Part 2 contains nv1a through ka2zvz
Part 3 contains wn3a through kd4zzj
Part 4 contains kj5aa through kd6zzm
Part 5 contains aa7a through wa9zxm
Part 6 contains oa4hv through zs6tw

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
```

a return address, add optional `return user@host.domain'. For example:
Subject: Could be anything (sure!)
return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update March 28 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3288. Radio Amateurs on USENET List Mar 1994 Part 2 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 07:26:23 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Mar28.2@ve6mgs.ampr.org>
Source record: 269343
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 94/26/28 00 26$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update March 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3289. Radio Amateurs on USENET List Mar 1994 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 07:26:37 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Mar28.3@ve6mgs.ampr.org>
Source record: 269344
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 94/26/28 00 26$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update March 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3290. Radio Amateurs on USENET List Mar 1994 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 07:26:44 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Mar28.4@ve6mgs.ampr.org>
Source record: 269345
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 94/26/28 00 26$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update March 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3291. Radio Amateurs on USENET List Mar 1994 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 07:26:56 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Mar28.5@ve6mgs.ampr.org>
Source record: 269346
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 94/26/28 00 26$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update March 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3292. Radio Amateurs on USENET List Mar 1994 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 07:27:13 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Mar28.6@ve6mgs.ampr.org>
Source record: 269347
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 94/27/28 00 27$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update March 28 1994
```

#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3293. 6m Equipment?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 07:30:03 UTC
From: bkoen5@aol.com
Message-ID: <2n611r$fqk@search01.news.aol.com>
Source record: 269339

I am looking for good, INEXPENSIVE, 6m equipment. How do the Azden radios (mobile, HT) compare with some of the more expensive options that are available (Kenwood)? Also, what about used equipment? What is available?

Thanks,
Bryan Koen

Was wondering if anyone out there in radio land has had any experience with
the Kenwood TM-732A its a mobil dual band and looks like a real nice piece. So
If you own one or know someone that does let me know what you think of it.
Thanks.

The trick to TVI complaints from neighbors is to put up the external
antenna and not operate for 30 days or so. This will weed out the true
TVI problems and problem neighbors......

3297. dual band HT advice

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 14:54:25 UTC
From: phydoux@bert.cs.byu.edu
Message-ID: <phydoux.764866465@bert.cs.byu.edu>
Source record: 269349

Greetings!

I'm looking into buying a dual band HT, but I don't have access
to any mail-order catalogs or other information regarding the newer HTs
available. I was hoping that somebody who reads the newsgroups here
could give me their opinion about any of the models currently avaliable.
I've got a tax return check coming that might finance a new HT... Which
brands are good? Is there a certain brand/model I should stay away
from? Any advice/insights would be appreciated. You can respond via
mail or in this group, I am a regular reader.

Its a great radio. I got mine when they first came out. I mount the remote head with velcro and put an RJ-11 jack on the cable for quick disconnect. It is very sensitive and get a lot of intermod in downtown areas. Lots of features - more than anyone needs. The Mic keypad buttons are a bit hard to press and (please correct me if this can be changed) do not make an audible beep or tone when you are sending DTMF tones, so its hard to tell if you pressed hard enough - use the autodial memories.

>I am curious if the chicken wire is acting as an attenuator.
>Louis A. Destree

Hi Louis, of course, the chicken wire is forming a sort of Faraday shield for your RF energy. Put your 1/2 wave center-fed antenna outside at least 20 ft high and horizontal if at all possible. You are probably more likely to generate TVI with an indoor antenna than with an outdoor one... use a low-pass filter if you have TVI problems.

Landline BBS Open to All: 916-262-1657
RACESBUL.319 RELEASE DATE: March 28, 1994
SUBJECT: MGT - Calling in outsiders

During an incident there are times that it is necessary for a jurisdiction to request additional help from "outside". In California this involves mutual aid whereby local authorities turn to an "outside resource" (outside of their jurisdiction) to augment their own forces (or where none exists) to accomplish their mission. Either way (i.e., augment or provide) the so-called "outside" mutual aid people are ALWAYS under control of the REQUESTING government. The structure by which that functions is part of the Incident Command System.

In communications involving responding FCC Amateur licensees this aspect has at times been misunderstood by those not familiar with how mutual aid works in fire and law. Those "outside" resources NEVER come in to "take over". Mutual aid does NOT belittle the locals, but augments them with professionals trained in mutual aid response from other jurisdictions.

It is inconceivable that any jurisdiction would ever call in distant professionals to spite the locals, as we once heard it expressed by an exasperated amateur. It just ISN'T done for a number of very good reasons.

Just because there are local FCC licensed Amateurs doesn't necessarily mean a government will call upon them in an emergency if they haven't been active, trained in and familiar with a RACES or similar communications reserve program.

It is professionalism, whether paid or unpaid. No professional ever responds in mutual aid to do anything other than to support the local needs. That is the true mark of a professional (paid or unpaid), whether law, fire or communications.

Any communications responder who is such an amateur that he/she can't discern the difference between amateurish activity and professional activity shouldn't be responding no matter how well intended. Instead, that person needs to take training and familiarization programs to help understand the mutual aid process.

An ACS/RACES response from a city, county, or State OES in support of another government is due to a request from that government. To respond without a verified official request is the height of amateurish activity, and can have severe consequencies except in the most unusual of instances.
EOM.

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP.

3306. What's a good 2m/440 mobile?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 16:08:09 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9403281608.AA25437@metro.mccneb.edu>
Source record: 269357

It's time to buy a 2m/440 mobile rig, before the IRS refund is noted by the family checkbook inspector. I'm particularly interested in monitoring the 160 mHz and the 460 mHz ranges, as well as use the regular ham bands. (No, I'm not going to transmit - flamethrowers off, please). What units seem to be particularly well-qualified for out-of-band reception as well as having good ham-band performance?

What antennas are good for such machines -- without an appearance that would overly embarrass the spouse?

Paul Marsh N0ZAU Omaha pmarsh@metro.mccneb.edu

>

This sounds familiar.

I've seen this in two instances. In the first, the air flow around the unit had gotten blocked, and the unit was overheating. Removing the offending blockage and allowing the unit to cool back down did the trick. However, this doesn't sound like your problem.

In the other instance, I had just had electrical work done on the car. The radio would randomly shut itself down. I also had it turn itself on automatically whenever I started the car. TO solve this one required resetting the unit (there's some combination of keys to hit at startup, or some internal button you have to press that resets the thing to factory settings. It's in the manual somewhere). I guess it had just gotten internally confused when my electrical system broke...

If none of these do the trick, you'll probably have to ship it back, but do give the factory reset a try before you dig out the shipping materials... Good luck!

3310. Obscenity on ham bands

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 17:20:25 UTC
From: dhughes@prairienet.org
Message-ID: <2n73kp$o6i@vixen.cso.uiuc.edu>
Source record: 269361

I just passed my no-code test last week, and have been listening to some ham chatter on my SW receiver. Saturday night on 3910 kHz I heard some of the most disgusting language I've encountered anywhere. One guy was spouting one obscentity after another, and three other guys were laughing at his inept signal and giving it right back to him. All but the instigator were regularly giving their calls. Is this pretty much what I have to look forward to?
--

3311. SUMMARY:2m HT Recomendations

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 17:23:38 UTC
From: harland@otter.mech.ubc.ca
Message-ID: <2n73qq$ot6@nntp.ucs.ubc.ca>
Source record: 269362

Summary of 2m HT recomendations:
First the specific features that people use/like is laid out
then I will list responses by manufacturer.

Responses to date: 14

Feateures:

Power: 2 people say 2-3W is enough fo local use
4 people say 5W+ is needed for longer distances

DTMF: 4 - must have

CTCSS: 2 - good to have
2 - not worth it

Paging: 2 - not worth it
1 - have but never use

Lighted Keypad: This came up quite frequently --> good idea

Manufacturers:

Kenwood:
28A: 4 - problems with intermod
2 - battery falling out
2 - poor battery life
78A: 1 - intermod
27A: 2 - good reviews but 1 poor battery life
22AT: 1 - good review
1 - Kenwood not woth the money

Radio Shack:
202: 5 - good reviews

Yaesu:
FT-530: 3 - good reviews
FT-416: 1 - very good review

Alinco:
DJ-180T/H 1 - very good review
1 - Alinco not worth them money

Standard:
C168A: 2 - good reviews

I-COM:
2GAT: 1 - big but worth it

Which one will I buy ?
I am going to check into Radio Shack but I am now looking
towards a Yeasu FT-530 or FT-411.

Thanks for all the great info, I would have bougth Kenwood
had it not been for all the intermod problems.

I hope this summary will help someone else who is also in the
market for a 2m HT.

Source record: 269364

giridhar@ee.umr.edu (Giridhar Tatavarti) writes:
:
: I am a novice in the matters related to ham-radio.

Welcome!

: What I know about ham-radio is that it can be used for
: communications around world..as long as both the parties
: have a ham-radio each.

Correct, as well as a current Amateur Radio license, from
the FCC (in the US).

: I heard that ham-radio can help you make friends around the
: world. Can anyone please tell me if I can buy a pair
: of ham-radios for me and my friend in some other country..
: and talk whenever we want? That would save me my long
: distance bills..But is that allowed? Or does ham-radio
: have a condition attached that it should be used only
: for emergency purposes?

Ham radio has a tradition of being an emergency radio
service, and still functions in that capacity world wide
as well as locally. You can talk to anyone, at any time,
about anything (except anything related to business or
making money for yourself), in just about any part of the
world (a few countries are off limits, usually cuz of politics).
Lots of hams talk to friends worldwide, as long as it's not
business oriented.

Make sure your friend in their country has a ham license from
their government.

: What would be the price of a ham-radio set which I could
: use for international communication ?

Theoretically you can build a ham transmitter/reciever with
an handful of parts for under $50. But, usually, figure on a couple
or few hundred bucks for the equipment, antenna, etc. That's considered
a bare minimum, used stuff. Many hams have 10's of thousands invested in
equipemnt over the years. Go to a local hamfest and see all sorts
of good used equipment for not much $$. I think you can get set up
fairly well for around $500 or so, per station.

: What is the frequency at which the ham-radios operate?

Many, depending on where your interests are and what radio you buy.
All the way from 160 meters (2Mhz) on HF, 80/40/10M 'shortwave', thru
VHF, UHF, and up into the microwave freqs (GHz). What you can transmit
on depends on your class of license. In the US it starts as Novice,
then Technician, then General, then Advanced, then Amateur Extra (the
top). You also have more priveleges for phone (voice) communications
as you earn higher classes of licenses. The Novice HF license is almost
all CW (Morse code) with some SSB voice to whet your appetite for a
higher class license :-).
:
: I would greatly appreciate if anyone can take the time
: to answer these queries on the newsgroup, or in a mail
: to me at giridhar@ee.umr.edu...

A good source of info if you are just getting into ham is to
go buy "Now You're Talking" at Radio Shack. In fact, if you
study the entire book, you should have no trouble passing your
Technician class license (no-code). If you want to talk world wide
thought, you will have to pass the 5 words-per-minute code test.
If you go that route, without the Technician's test, you can
become a Novice class operator (there is also a written test).
The book tells a lot about it.

I hope this helps.

Mike

>Gary: I'll be disappointed if your repeater beeps.
>
>Jeff NH6IL
On our repeater, the beep is a signal that something has definitely occured (i.e. the timeout timer has reset). I have worked on a number of controller and it ssems that most of them send a courtesy beep just for the sake of sending a beep. The beep on our machine is triggered by the same timer that resets the TOT (17 year old hard wired logic) and that if you keep talking back and forth without anyone ever hearing the beep, the repeater WILL timeout. If the TOT function is disabled, then you will not hear the beep since why send a notification for an event that never happens. In our new design, the beep will continue to do the same and then some. The beeps will have different characteristics to indicate the current mode of the machine: links ups, timers on/off, remotes up, etc.

In fact, if you don't like hearing the beeps on our machines, all you have to do is turn on your CTCSS as our repeaters encode PL on their outputs ONLY when they are receiving a signal in the input. Except for occasionally hearing the IDer while someone else is talking, it is almost like talking simplex. You may or may not hear a squelch tail when on person stop talking to the repeater, the repeater will stop sending PL which causes your receiver to mute before the beep is heard and the subsequent drop of the repeater carrier.

Repeater systems just need to be smart not cute.

Yep.
On HF, that is. I run 6m, 2m, and 70cm SSB, and people are nice and polite
and follow the rules.
Novel concept, eh?
With your tech, YOU TOO can get on >50MHz SSB. I wish I'd spent the $$$$
on better VHF/UHF gear and bought some old tube HF rig, but HF resale values
are pretty high these days....
AND, the antennas are a lot smaller ;-)

3324. New Award Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 20:18:18 UTC
From: kd1hz@anomaly.sbs.com
Message-ID: <2n7e2a$7mp@paperboy.ids.net>
Source record: 269375

In this age of political correctness, its unfair that we have a "DXCC"
award for HF operators, but nothing that a no-code tech can aspire to
achieve by yacking on two meters.

Therefore, the RI 2x2 Amateur Repeater Association is pleased to announce
that it will be awarding a new award especially designed with no-codes in
mind.

The coveted "DXCB" award is available to any licensed amateur, although is
especially designed with the no-code techncian in mind. To qualify for the
award, the operator must have 100 confirmed repeater QSOs on a single two-meter
"good buddy box", and demonstrate that since receiving their license they've
done nothing but operate 2 meter FM voice.

Recipients of the award receive a certificate suitable for framing next
to their FCC license, and will be listed in the DXCB "Hall Of Fame".

To receive your award, mail evidence of 100 confirmed repeater QSOs,
a sworn statement indicating that you've never operated a mode other than
2 meter FM voice, along with 10 box-tops from your favorite breakfast cereal,
to:

The Rhode Island 2x2 Amateur Repeater Association
Attn: DXCB Award Desk
Route 104, Box 17220
Smithfield, RI 02917

Please enclose $20 to cover return postage.

Allow 4-6 weeks for delivery of your certificate.

MD

|> radio.

I called my favorite mail order outfit and they do not have the 733 yet, but they figure they'll sell for around $650 or so, which is $115 over their current price on the 732. They also said that Kenwood is running very short of the 732. This may be due to the fact that the 732 is cellular capable and couldn't be imported after April 26th. The 732 was due for replacement so they are replacing it with the 733 rather than just fixing the firmware to eliminate cellular (as may happen with other rigs). I wonder if the 733 is really worth the extra $115 - did they address intermod problems for instance????

Howdy,

I think I read somewhere that this story has been debunked by someone who did some snooping and found that there were no such students at Harvard when this was supposed to have taken place.

We did that on purpose, so people could do their own processing against
the database. The comma separation was there so PC Basic could be used.

dhughes@prairienet.org (Dan Hughes) asks:

>>I just passed my no-code test last week, and have been listening to some
>>ham chatter on my SW receiver. Saturday night on 3910 kHz I heard some
>>of the most disgusting language I've encountered anywhere. One guy was
>>spouting one obscentity after another, and three other guys were laughing
>>at his inept signal and giving it right back to him. All but the
>>instigator were regularly giving their calls. Is this pretty much what I
>>have to look forward to?

Frankly, yes. That is, if you listen to 75m in the evenings, you will hear people who are generally obscene, obnoxious and probably obese, not to mention obsolete. It is the gathering ground for all that is objectionable in amateur radio.

The good news is that you don't have to listen to it. There are some real human beings on 75m as well, I'm sure, and there are people on the higher bands who are less objectionable.

If you have the no-code license, you won't be tempted to talk to this Low Life, and if you pass the code test you can work people on CW who don't act like this (it takes so long to swear on CW).

Fortunately, most of the scum on the ham bands collects in a few distinct places and while you find it, listen to it and weep, there is nothing that says you have to. Just tune past it and you will soon find something more to your liking.

I am as sad as you are that this stuff continues, but we are not going to change it overnight, and I have a load of fun, mainly on HF and mainly on CW, without running into any of this muck. Don't give up!

Unfortunately - that might be the case. Try listening on the CW bands.
You will rarely, if ever, hear that kind of language. Many of us duck
down to the CW bands to get away from the garbage on phone.

73 and good luck; and keep the faith (in Ham Radio)
de Sandy WA6BXH/7J1ABV slay@netcom.com

PS: There are plenty of Extra Class licensees who are guilty of the
transgressions you mention. You should NOT infer that I am saying
anything about "no coders". I've lived in Japan for many, many
years where 92% of all licensed amateur stations belong to "no coders".
They are pretty good - but, there are the bad apples in every barrel.

I have been proved wrong (phooey). Delete the `and only if' in the
above, for as some folks have pointed out there are other reasons
for appending a number besides whether or not the country has divided
itself into radio districts.

Kok: Know who first used `iff' in the literature? Hint: He used to be
Chairman of the U.H. Math Dept. (didn't stay long, though...) and he
is quite famous. [VERY big hint: his intials are P.H.]

73,

WHY MEN ARE BETTER THAN HAMS

1) They can go all night doing something worthwhile.

2) Their rubber ducky works but the ham's part doesn't.

3) They are ALWAYS communicative in a real way.

4) If they get boring you can always hit the belly button.

5) They have no problem with "Frequency."

6) They are alive.

7) You don't want to "squelch" them.

8) They can be "reprogrammed" to act human

9) A ham will tell you all men's secrets that they never experianced
for themselves

10) Their "transmitters" are never empty.

OK OK Im ducking sorry sorry sorry, I couldn't resist!!!

Are y'all still gonna ever speak to me!!!!!

I 'pologize! Honest! Sincerely! Would I lie?????

3335. HELP: Anyone know what a XR2206 chip is?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-28 23:46:04 UTC
From: zawada@softage.demon.co.uk
Message-ID: <CnEFCs.Hso@demon.co.uk>

Help, has anyone out there heard of a chip XR2206?

It's used in a converter to send SSTVFAX in a shareware program called SSTVFAX2. From what I can make out, it seems to be some kind of modem chip, but I can't find it in any of the catalogues I have. Can anyone help me with any of the following information?

1. Has it got an equivalent chip I can use instead?

2. About how much is it?

3. Give me an address anywhere (any country), I can order it from.

Thanks in advance.

Mark

From: moore@spk.hp.com
Message-ID: <CnEI05.Ku6@spk.hp.com>
Source record: 269289

My fire department is looking for used Motorola MT1000s, which I guess have been superceded by the HT1000. We need about three of them pretty quickly.
o cover 154 mHz region
o 16 channel w/ scan

We would also like to acquire the programming cable for these.

Any sources would be appreciated.

3338. Good novice HF rig recommendation

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 00:50:43 UTC

Message-ID: <1994Mar29.005043.16424@kodak.rdcs.kodak.com>
Source record: 269290

oFollow up to dkerk@eis.calstate.edu, this message is being posted as
a courtesy. Any mail sent to this address will be trashed

Hi, I just passed my novice exam, and I am looking for
recommendations on a good startup rig. These are the qualities I am
looking for:

a) Reliable, stable, well mannered radio.
b) About 100 w maximum power. Runs on DC or AC
c) Really low TVI, phone interference, and such. This is
critical, with a lot of nearby neighbors.
d) All band receive
e) Good receiver selectivity and noise rejection. Lots of
electrical static near the home.
f) Good basic SSB performance for when I move up.
g) About $300 to $400.
i) Service and support still available.
j) Transmits on all the standard amateur bands. 80,40,15, and
10 at least.
k) Good CW, not chirpy or a bad hum, etc.

I've considered something like a Kenwood TS 180.

I'd appreciate the recommendations of the net. Please e-mail to
dkerk@eis.calstate.edu or dkerk@ctp.org. Thank you.

3339. Q: Where do I get test practice software?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 01:18:03 UTC
From: dbushong@wang.com
Message-ID: <CnEJM4.EAC@wang.com>

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.announce.newusers
newsgroup before posting any articles. If you are an experienced user, please
help by refraining from answering frequently-asked questions on the newsgroup
if they are already answered by the FAQ articles. Instead, send e-mail to the
user who asked the question. (It will be helpful if you include the part of
the FAQ that answers their question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@uts.amdahl.com (Santa Clara, CA, USA)
Michael Larish KD6CTZ nomad@ecst.csuchico.edu (Chico, CA, USA)
Paul Schleck KD3FU pschleck@unomaha.edu (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana

established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.
* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civ-

ilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail

from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).

* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any kind over ham radio. Interference to other hams or services, as well as obscene, profane or indecent language is not tolerated and is illegal. Music and broadcasting are not allowed on ham radio. Some personal conversations may not be appropriate to Amateur Radio. Do you really want the whole world to hear about Aunt Mabel's hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers) in your local area. Look around and ask local hams. Search out local radio clubs. As well, some people have volunteered to be an Elmer over the Usenet. A list of UseNet Elmers and their e-mail addresses is posted to the newsgroup monthly. If anyone wants to be an Elmer, send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a look around the FTP archives and e-mail servers listed in Part 2. There's so much out there on UseNet, you'll find plenty of things you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a thrill to build your own transmitter and put it on the air. However, building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.

Antennas can be much simpler projects than the transceiver, though some types are also quite involved. Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common

antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books from many sources, including ARRL and several Hams, discuss antennas in depth.

When building or even understanding antennas, it is good to know the relationship between the antenna element length and the frequency or wavelength it is designed for. An antenna performs best at multiples of 1/4 of that wavelength, though 5/8 wave also has beneficial qualities. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

3341. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 01:41:02 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* World-Wide Web, WAIS, and Gopher (2/94)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including UseNet, electronic mail, the Internet, dialup bulletin board systems (BBS) and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There are several newsgroups dealing with Amateur Radio and other aspects of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*). It is also cross-posted to rec.answers (the archive for FAQs in the rec.* newsgroups) and to news.answers (UseNet's general repository for FAQs.) These should be the first places to look for new current copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 386 PC at home with
over 40 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at ham-server@grafex.sbay.org. This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server seems to have more emphasis
on MS-DOS programs and binary files though there are many plain-text
articles as well.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)
NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)

rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)
has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au
This site contains a mirror of ftp.cs.buffalo.edu's Ham Radio
archives. It provides a shorter distance if you're in
Australia or if Australia is a shorter net.path for you than
New York.
nic.funet.fi
This is one of the largest FTP sites in Europe and maybe the
most popular. There are many directories of Ham-related files
in /pub/ham. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net
A large FTP site in the USA - UUNET contains sources and

binaries for many different types of computers.
wuarchive.wustl.edu
A "mirror" of the files that were on the now-defunct
wsmr-simtel20.army.mil FTP site, plus a *LOT* more.
If you are on a Unix box locally, see if your system
administrator will "NFS-mount" these files for faster/
easer access.
ucsd.edu
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu
cd pub/ham-radio - This site contains the HyperCard Hamstacks
written by Diana Carlson as well as ASCII readable ham radio
question pools.
ftp.apple.com
cd pub/ham-radio - Ham software and information, especially
Macintosh software
wolfen.cc.uow.edu.au
athene.uni-paderborn.de
ham radio files and software for the Amiga computer system
rtfm.mit.edu
cd pub/usenet/news.answers - all participating FAQs and
periodic informational postings are archived here, including
those from the rec.radio.* newsgroups which can be found in
pub/usenet/news.answers/radio. Participating FAQs are
automatically archived here when they are posted on UseNet.
ftp.amdahl.com
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
This site contains many ham radio related programs and
documents. It also is the only FTP-able site containing
up-to-date copies of the files also available via e-mail
on the ARRL's information server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here
is that Netnews is far more prevalent than direct Internet hookups,
accurate name servers, smart mailers and routers, and of course,
telnet and FTP client services. What this means is that your trouble
may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet

and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes not running Unix, do not support these
services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 198.137.220.1). The exact IP
number for the site can be obtained via the nslookup utility, if
your computer supports it. (The FAQ does not print IP addresses any
more because they change so often.) Your system may not recognize
the "fully-qualified domain name" (like callsign.cs.buffalo.edu),
but it should ALWAYS recognize an IP number if their network is
reachable from yours.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent. Also, at many education sites, it is common
practice to block telnet connections above TCP socket 1000 or
so in a somewhat misguided attempt to block usage of
"recreational" TCP socket applications such as Multiple User
Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases,
a polite word to the system administrators, pointing out
the worthwhile services available on sockets 2000 and 3000
will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.

However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site

```
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit
```

A note on the use of FTP mailservers: If you want to use FTP mailservers, like FTPMAIL, please be considerate of any systems that your mail must pass through. The quickest way to find yourself cut off from the world is to make the admins of sites that pass your mail pass 60Mb of X11 graphics system source. If you need large amounts of information from a mailserver, contact your admin for help -- it may already be available, or he may know a better way to get it.

* World-Wide Web, WAIS, and Gopher
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

```
comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www
```

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW are as follows:
file://ftp.cs.buffalo.edu/pub/ham-radio Buffalo FTP files via WWW
file://rtfm.mit.edu/pub/usenet/radio/ham-radio Ham Radio FAQs & info
wais://rtfm.mit.edu/usenet/radio all radio FAQs & info
http://www.acs.ncsu.edu/HamRadio NC State HamRadio WWW Server
http://gluon.imsa.edu/~scott/hamradio.html Experimental WWW Page

Although still very much works-in-progress, the last two URL's are excellent examples of WWW servers with numerous references to other resources.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu

In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word
"subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command
words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to
the mail list addresses at ucsd.edu. Since rec.radio.info is a
moderated newsgroup, requests to post to it may be sent to Radio-Info
but they will be mailed to the moderator,
rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu
under subdirectory mailarchives/{mail-list-name}. However, Radio-Info
is not archived at UCSD because almost everything is either on one of
the other lists or in the news.answers archives at rtfm.mit.edu
(see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to
listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP

Login is bbs, no password. This BBS is also available via UUCP,
login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of
other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder.
The number is 203-666-0578. More information can be obtained from
the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on
the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB
HAM-server. Also see many of the FTP sites listed earlier in this
section. There is now way to keep a list like this anywhere near
up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the
following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical
name server sits on port 3000. These are different port numbers
than what telnet usually defaults to. So if you just telnet to these
machines, you will get a login prompt instead of the server. How you
tell your telnet program to connect to port 2000 or 3000 instead of
the default port is operating system dependent but it is usually done
with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints
above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory
and they support fairly detailed help facilities. The first command
you should execute when connecting to one of these servers is "info".
This will list general info about that server and how to use it. You
should then type "help" to list the various commands available.
Typing "help" followed by a command name will give you a little more
detail about that command. Servers allow searches by call, last name,
zip code or city and also provide regular expression filters to trim
your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:

```
help
lookup kc1sp wn4bbj
lookup n0fzd
quit
```

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns, separated by spaces. For Canadian calls, use the callserver at REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an OS interface to the MBL packet BBS using the Buckmaster CD-ROM callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those who wish to listen to the call signs allocated in each group for each district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA. As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The maintainer of this archive strongly encourages all existing archivers of mods to mirror their collections on this site. in this way, maintainers will come and go, but the collection of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are
available from the ARRL e-mail file server (see above). They want
direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones
(this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and
contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY
11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449,
FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet
70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655.
Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815,
(800) 365-SUBS - lots of special interest columns, like QRP,
ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 -
up-to-date information on Amateur Radio happenings, including
VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In
general, you send a bundle of foreign (not States!) QSL cards to
the outgoing bureau in Newington, Connecticut, along with a label

off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However, rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450

USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks

DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently--created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and

does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a

reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a "PL Tone." PL is "Private Line", a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for "closed" repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a "closed" repeater even if your radio doesn't
do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to
your country. See the country-specific newsgroups in "the rec.radio.*
newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get
a license in your country. See also the ARRL e-mail server. (Details
are in Part 2.)

If you know of any location where this information is available
electronically, whether by an e-mail server, anonymous FTP, or a
contact person, please mail it to us so we can include it here. Send
it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)?
Editor's note (11/92): the regulations affecting this question are
being changed. Contact your local Volunteer Examiner (VE) and ask
about a VE 60-day pass. More details will be included in future
revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines apply:
* A reciprocal license is required in all foreign countries (that have a reciprocal operating agreement with the US), except Canada, where the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them which country you are going to visit and they will send you the info and an application form. Foreign hams can likewise request information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur license (ie, notarized copy), and fee if applicable (use a bank draft of a bank that does business in that country) to the appropriate licensing administration of the foreign country. Processing may take 30 to 90 days.
* If less than one month, you could try sending the application and pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment into their country without a license or permit. If you applied, but haven't received the permit yet, show the copy and your FCC license to the customs officer, however, the equipment may still be held at customs until your departure.
* Be sure to use only those frequencies covered by your FCC license which are also used in the foreign country, unless otherwise authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief via PRB-1. Meet with the local government and seek an informal compromise. It is possible to win in court...but it's expensive and time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.

* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various aspects of electromagnetic interference. The filenames start with "EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI), EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)
KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep
your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020,
Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only)
is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past
where you can only get a new callsign if you move or upgrade). You

can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 -
old radios, TVs, ham equipment, 40s and 50s radios,
telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q,
Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb,
NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112
(10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There
are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use
packet radio, you'll need a radio (2 meters and 70 centimeters are
most popular), a box that converts radio signals to digital signals
that a computer can understand (called a TNC or terminal node control-
ler) and a computer or terminal. For some computers or TNCs you may
need special software as well. However, most TNCs and computers get
along quite well with just a terminal emulator software package. Most
personal computers can be interfaced to use with packet radio. Since
there are many digipeaters, generally even an HT will work with
packet radio.

Your first source of information on Packet Radio should be the
rec.radio.amateur.digital.misc newsgroup. It has its own regularly-
posted FAQ that goes into much more depth on the subject than this
one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson
Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on
the ARRL e-mail server or the directory /hamradio/packet on the
KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try
AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington,
DC 20044 (301-589-6062). They also have an international net on
Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's
Handbook. Ham Radio stores in your area may either have it or be

able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as

valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

3343. Daily Summary of Solar Geophysical Activity for 26 March

NOTE: The Effective Sunspot Number for 25 MAR 94 was 45.0.
The Full Kp Indices for 25 MAR 94 are: 3+ 2- 3- 3- 3+ 3+ 3o 3-
The 3-Hr Ap Indices for 25 MAR 94 are: 20 6 11 13 20 18 16 12
Greater than 2 MeV Electron Fluence for 26 MAR is: 1.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. The only x-ray flare of the
past day was a B3 (no optical) at 26/1503Z. All sunspot regions
currently on the disk are small and relatively inactive.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled, becoming active by 29 March
due to a recurrent disturbance.

Event probabilities 27 mar-29 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 27 mar-29 mar

A. Middle Latitudes
Active 15/15/25
Minor Storm 10/10/25
Major-Severe Storm 05/05/10

B. High Latitudes
Active 15/15/25
Minor Storm 10/10/25
Major-Severe Storm 05/05/10

HF propagation conditions were normal over all regions.
No changes are expected until 29 March when minor signal
degradation may begin to be observed over some higher latitude
night-sector paths.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3345. FT-530 MOTD (Measurement of the Day -- Intermod!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 02:58:46 UTC
From: kennish@kabuki.EECS.Berkeley.EDU
Message-ID: <2n85h6$9vp@agate.berkeley.edu>
Source record: 269296
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

OK, UHF measurements for sensitivity and intermod....

Raw F3E sensitivity (opens squelch set at threshold):

UHF receiver (right side):

Freq (MHz) Pin (dBm)

300 -83
315 -96
330 -105
345 -111
360 -117
375 -122
390 -122
405 -121
430 -122
445 -122
460 -120
475 -119
490 -115
500 -114

VHF receiver (left side):

PLL does not lock for 300 MHz:

Freq (MHz) Pin (dBm)

300 x
315 -74
330 -74
345 -77
360 -71
375 -84
390 -100
405 -100
430 -118
445 -122
460 -115
475 -105
490 -104
500 -104

TTID (Twin Tone Intermod)

f1 = 445 MHz, f2 = 446 MHz, tune 447 MHz for 3rd IM:

breaks squelch at -66 dBm on UHF side, -69 dBm on VHF side.

f1 = 475 MHz, f2 = 460 MHz, tune 445 MHz for 3rd IM:

breaks squelch at -59 dBm. NO VHF side measurement (sorry).

What this means: For best IM rejection, listen to UHF on the VHF side! As advertised in the manual, cross band RX has a narrower range, and hence better out of ham band IM rejection. Didn't test this on the bench, sorry, but remember that 1 dB of RF attenuation drops the 3rd IM products by 3dB......

More numbers when I have time, next will be VHF sensitivity and IM rejection, followed by UHF+ (800 MHz) measurements.

People that are dying for a particular measurement can mail me and I will try to set it up.

-Ken

p.s for those that must know, my FT-530 has the Jumper 13 mods done, and the serial number begins with 3D131...

>--

There are frequencies where that will happen. More accurately, there
are people with whom that will happen. As the saying goes, if you
don't like what you hear, spin the dial again. There's plenty of good
stuff out there. Hunt for it, and don't let a few people ruin your
entry into this great "hobby".

Chicken wire is a RF killer for sure. KB3MK's suggestion is a good one,
but second best is an attic antenna (above the chicken wire!). A 10
meter dipole will fit easily and work like a charm. Just keep it away
from anything metal and if there are phone wires, etc, try to run it ant
a 90 degree angle to them if possible. I worked DXCC with 100 watts and

an attic antenna. Have fun!

3350. IC901A Fiber link

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 04:41:17 UTC
From: djk@bobsbox.rent.com
Message-ID: <280394p2341@bobsbox.rent.com>
Source record: 269301

I am curious if anyone has had any experience with setting up the Icom IC901A using the fiber optic link of 500 feet. The emergency office of management in my town is setting an office of communications. We have the opportunity to use a celluar tower on a building about 500 feet anyway. The tower is about 100 feet. The IC901A's fiber kit seems to ideal for full function remote control of the radio. The tech support people at Icom say that there was a customer in Alaska several years ago that used the same fiber kit on a marine radio succesfully. The tech could not remember if they used pastice or glass cable. We have tried a 500 foot run of the plastice cable and it did not work. The question is does any body know of a source on glass cable that match the custom connectors that Icom uses. Along with the source of such a cable any knowledge as to whether or not glass will work. I would appreciate any information or suggestions. Please forward responses to me directly.

1. Source of glass fiber (not plastice) compatible with the Icom 901
2. Capability of the glass fiber working over 500 feet
3. Send responses to DJK@bobsbox.rent.com

Source record: 269302

In article <CnDDGG.1H7@holly.can.com> ** none ** writes:

> I am in the process of trying to decide what to buy, I know I am

From experience with all three:

Kenwood Handhelds, TH-75 Nice dualbander, but difficult to see display
in the dark. Because of this and a couple of near misses on the freeway,
I sold it and replaced it with a TH-77. All the accessories are (for the
most part) interchangable. The TH-77 has back-lit buttons and is a SNAP
to adjust in the dark.

The TH-78 is a smaller product and in their haste to make it smaller,
Kenwood threw out any requirements for intermodulation susceptibility.
An otherwise nice radio as long you only user the rubber antenna and
work solid repeaters.

News from W.A.

R.T.T.Y. MAIL BOX AT WIRELESS HILL PARK

The radio for this project is undergoing final testing at the
QTH of ROB VK6THP , and after a period of OPERATIONAL activ-
ity from Robs QTH It hoped to have it installed at Wireless
Hill park by MID APRIL

PROPOSED SOUTH WEST DIGIPEATERS FOR THE PACKET NETWORK

It is proposed to establish a digipeater at the MT WILLIAM
site , to complement the current Turner Hill digipeater. The
proposal is to use frequency of 144.850 at Turner HILL
(presently 144.750) and to use 144.750 on MT WILLIAM

This will provide better coverage into areas such as Collie,
Donnybrook and other south/west towns. Both Turner Hill and Mt
William will be linked by VHF ROSE links, and also back to
PERTH. Another advantage of this proposal , will be the
provision of an alternate BBS forwarding link on 144.850 to
VK6AJJ BBS

Finally it was decided that a general access port be esta-
blished at WIRELESS HILL PARK as and when time and finances
permit. This will be on 2m and 70cm , the frequencies for
these have yet to be decided , after tests have been carried

out on site to determine there will be no interference
generated to existing servies who use the site.

ARE YOU, THOSE WHO are READING THIS BULLETIN?, FINANCIAL
MEMBERS OF W.A.A.D.C.A. ??????

W.A.A.D.C.A is very short of funds.if you use the digipeaters
and services provided by the small group of financial members
of W.A.A.D.C.A. and wish to see the continued DEVELOPMENT of
the packet network , as described above,
THE COMMITTEE WOULD APPRECIATE YOUR FINANCIAL SUPPORT
and membership APPLICATION as soon as possible.

18 MARCH - 24 MARCH 1994

Issue No 12
Date of issue: 25 March, 1994

INDICES:
Date 18 19 20 21 22 23 24
10cm 087 089 089 091 091 092 093
A 18 14 10 22 17 15 (17 estimated)
T -06 43 47 25 18 57 60

SUMMARY OF ACTIVITY

Solar activity was very low over the period.

The geomagnetic field at Learmonth (WA) was unsettled to active on 18th, quiet to unsettled on 19th, unsettled to active on 20th, active on 21st, unsettled to active on 22nd with a brief minor storm period, quiet to unsettled with brief active periods on 23rd and 24th March.

Ionospheric F2 critical frequencies at Sydney were depressed by up to 30 per cent during local daylight hours on 18th March, otherwise near predicted levels until late on 21st when frequencies became depressed by up to 20 per cent until 22rd when conditions became enhanced by up to 20 per cent. On 24th, frequencies were mostly near predicted monthly values apart from brief enhanced periods of up to 30 per cent. Spread F was observed during local night on 18th.

FORECAST FOR THE NEXT WEEK (25 -31 MARCH)

SOLAR: Low to very low.

GEOMAGNETIC: Quiet to unsettled, with active periods possible 29-30 March.

IONOSPHERIC Mostly near predicted monthly values, with occasional enhamcements of 15-30 per cent.

Courtesy of IPS Radio and Space Services

Paper for Teleprinters

Please, PLEASE, does anyone want some teleprinter paper, I have boxes of it. It is triplex paper (three sheets of paper, two sheets of carbon paper), you can have it for the cost of freight (you pay the freight). This paper will work in any pressure machine, or even typewriters, no good for tractor machines. When you unroll it you finish up with three rolls of paper and two rolls of carbon paper. The paper you can use, the carbon -- well you can give it to the children to mess up the house. Don't worry about the amount you want, I have enough.

Contact Syd VK2SG, phone 02-631 2576 or ok in the call book.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @ VK2RWI

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI.

Email address for the Broadcast Officer is :

patl@conmusic.pitt.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast footprint. We know we reach ZL and many South Pacific islands. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes ANARTS News802 27/03/94.

Inserted by VK2BQS (Jim) Vice-President ANARTS.

This device is a Monolithic Function Generator made by EXAR.
Don't know where do get them anymore. I think EXAR died or
or was purchased by someone. Expect the part number of have the
same numbers but change its prefix.

It should be inexpensive ($10 or less).

I do know of a supplier that stocks old - hard to find stuff.

Well, I have a Standard dual-band HT (C528A), and recently got to play
with one of their mobiles.. it's got a brick you put under the seat or
wherever, and the control head is the microphone.. very impressive.
Standard is an excellent company, and their radios while a bit more
expensive are an excellent investment.

In doing some climatological research on snowpack sublimation at high altitude (alpine) environments in the Rockies, I've dialed into the "SNOTEL" machine several times. I BELIEVE it's a Forest Service project (but am not totally sure - it's been several months since I last checked) in Washington State.

The system seems pretty reliable. SNOTEL sites are scattered throughout the west. The ones I check seem to get something transmitted every 3 days or so and frequently you get "runs" of data where readings are transmitted
every day for a number of consecutive periods...

Greater than 2 MeV Electron Fluence for 28 MAR is: 4.4E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7695 (S16E05)
produced the largest flare of the past day, a B6/SF at 28/0937Z.
This region is growing slowly and is presently a small C-type
sunspot group.

Solar activity forecast: solar activity is expected to be
very low. B-class flares are possible in Region 7695.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to become active by the end of tomorrow due to a
recurrent disturbance. The field should return to quiet to
unsettled levels by the end of the three day forecast period.

Event probabilities 29 mar-31 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 29 mar-31 mar

A. Middle Latitudes
Active 25/25/25
Minor Storm 25/30/20
Major-Severe Storm 10/10/10

B. High Latitudes
Active 25/25/25
Minor Storm 25/30/25
Major-Severe Storm 10/10/10

HF propagation conditions were normal over all regions.
Minor signal degradation may yet be observed over the high and
polar latitude regions during the next 48 hours, particularly
on night-sector transpolar and transauroral circuits.
Conditions should then improve to near-normal by 31 March or
01 April.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,

EPL = Eruptive Prominence on the Limb.

Just like everywhere else in society, we have our own assortment of
garbage mouths. As the civility of our overall society decreases (watched
many recently made movies lately?) so, too, does that of the amateur
population. Fortunately, the good guys are still in the majority, but for
how long?

I keep seeing complaints of intermod on vhf rigs, but little or nothing about how to cure it. Years ago I had a 2 meter rig (the company is now defunct for good reason!) with horrendous intermod from fm broadcast stations. I cured it by placing a 1/2 wave trap in the coax from the antenna to the rig. If you recall your transmission line theory, a 1/2 wave piece of transmission line looks like an open when the far end is open, and a short circuit when the far end is shorted. Here we will use the open-ended case. Just install a T-fitting somewhere in the coax, or even right at the input to the rig. Then prepare a 1/2 wave piece of coax (allowing for velocity factor) and plug it into the T. Make it a little long to allow for trimming. What you want to do is trim it so that at mid-band, it has no effect on SWR or power output as read on the meter of the rig. In other words, with the 1/2 wave section unplugged, take a close look at the power out/SWR reading. Then plug it in and cut off about 1/8 inch at a time until the reading returns to the exact same as before. You now have a high-Q trap which looks like an open circuit at your chosen frequency, and various degrees of off-resonant load at other frequencies.

I'm not saying this will cure all intermod problems, but it worked for me and won't cost more than a few pennies to try. Granted, it's not too cool for HTs, but for mobiles and bases, it just might be all you need.

Hi,

We just got 25 (minimum order) of these at my work from either Exar
or from their distributor (I don't know which off-hand.) If you need more
info, email me; I have the data book on my desk.

Alan

3361. Re: Question on Kenwood 732 A

Newsgroup: rec.radio.amateur.misc

>In article <2n672m$eer@news.iastate.edu>, bwehr@iastate.edu (BDW) writes:
>> Was wondering if anyone out there in radio land has had any experience with
>> the Kenwood TM-732A its a mobil dual band and looks like a real nice piece.

Sounds like everyone like the TM-732A. Methinks otherwise.
There are some things I like about the radio, however here
are the bad points:

1. The legends on the front panel above the push buttons are invisible
red letters on black background with no backlighting. I have to use
a flashlight to see the labels at night. The LCD backlighting can
be adjusted from too bright to extremely over bright.

2. The projecting rubber bumps that maquerade as a microphone
touch-tone pad have had all the silk screening rubbed off.
Clue: paint doesn't stick to rubber very well.

3. I bought one of the original models. DTMF squelch does not work
if the memory channel 100Khz digit is odd. Works fine if it's even.
Kenwood has offered to fix this for free. I gave up playing phone
tag with them and never had mine fixed.

4. DTMF squelch does not allow for additional digits (#) to convince
a repeater to pass touch tones instead of muting them. Paging is
unfathomable.

5. The removable front panel has no easy way to mount on or under a
dashboard. The $45 mounting and cable extension kit is a kludge.
I had to use velco for lack of anything better. This gives it a
nice mushy feel or a moving target when pushing buttons.

6. The cute little fan ate something and died. I guess you could
call this abuse. I would have prefered some better grill protection.

7. The RJ45 telco connector that is used for the microphone has
fallen apart twice from exessive side loading (something it was
not designed to handle). At least the old round connector provided
some strain relief.

8. RX intermod on the UHF band is awful. Driving through town,
all I hear is paging and IM on UHF. VHF appears to be ok. I don't
have two signal generators so I can't verify this with measurements.

9. The UHF receiver is essential deaf below 435Mhz.

10. The 4 function keys on the microphone use a crud D/A (digital
to analog) converter. Moisture condensation has made using these

buttons in the morning a real challenge.

11. The controls and functions are arranged in what I consider to
be a disorganized manner. Operation of the function key can be:
just the button
funct key followed by the button
funct key held > 1 second followd by the button
funct key held while pressing the button.
funct key held while pressing the button and turning on the power.
I have to create a cheat sheet to operate the radio. I have my
own idea on how a radio should be controlled. Function keys were
basically a good idea when there were only a few functions and
a crummy idea when expanded to the huge number of goodies that need
to be controlled in todays radios.

12. Many of the radio "modes" are either not displayed or well
hidden on the front panel.

13. The squelch has little or no hysteresis. This is because
it's actually a 5 bit (32 position) A/D converter. This yields
a ganularity of about 10 degrees. If hysteresis had been introduced,
it would have been difficult to adjust the squelch. Lacking squelch
hysteresis, weak signals sound like a machine gun.

14. The radio does NOT include a built in diplexer. This resulted in
my doing something stupid. I used seperate antennas for VHF and
UHF on my truck. They were about 10 inches apart. I blew out the
UHF front-end FET. A duplexer offers reasonable isolation between
the VHF and UHF sides. Add $50.

15. The radio arrived with the deviation set to 6.5Khz, PL=400Hz,
and -250Hz off frequency. (Should be 5.0Khz, 750Hz, 0Hz).
Microphone gain appears exessive and is not adjustable.

Before you declare the TM-732A a lost cause, you might consider
that many of the above complaints also apply to comparable equipment.
I did some shopping around when I bought mine 2 years ago, and
found equal or worse problems with the competition.

Credibility check: I used to play RF design engineer and have
designed or worked on about 20 different radios in the past.

3362. Canadian Reciprocal Licences

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 08:41:00 UTC
From: R.G.Harris@sheffield-hallam.ac.UK
Message-ID: <2D97E9D1@cerberus.shu.ac.uk>
Source record: 269311

The licence issuers in the US seem to take a real pasting from many people
in
the US for their long delays. I've got to say that the Canadians at
Industry Canada,
are so fast it is hard to believe.

Calender :
14 March posted request here for reciprocal info
16 March replies to posting (thanks to those who replied)
17 March Fax to Edmonton Office of Industry Canada to confirm procedure
17 March Reply by fax saying send copy of licence (and NO money - it's
free)
21 March Sent copy of licence by fax
28 March Canadian licence arrives here (it left Edmonton on 21 March)

Now that's service, and at a price I like!

By the way, the RSGB in the UK think it takes 3 months and that you contact
the Dept of Communications.
I'd better tell them that its a little quicker than that.

Finally, the licence says I need to use G4APV/VE6. I thought that
convention would put the VE6 bit in
front?

Hope to hear some of you when I am in Edmonton in June/July this year

Bob Harris
G4APV (/VE6)

>
> If you have the no-code license, you won't be tempted to talk to this
>Low Life, and if you pass the code test you can work people on CW who
>don't act like this (it takes so long to swear on CW).

Ah yes, yet another reason to learn CW. On the other hand, I don't want to
just let the low-lifes take over the phone bands either. The best way to get
rid of them, IMHO, is for more good hams to get on the bands where the scum
live. Quiet frequencies (be it on HF or VHF/UHF repeaters) seem to attract
these kinds of low-lifes. A busy frequency is usually a "clean" frequency.

Digest of Articles -- QST, May, 1993

Following are digests of articles printed in the May, 1993 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Home-Brewing a 10 GHz. SSB/CW Transverter - Part 1
Author>Lau, Zack - KH6CP
Source>QST May 1993, pp. 21-28
Abstract>First of a 2-part construction article describing a 10 GHz. transverter. It utilizes only readily-available parts but to build it requires the builder to have had some experience with VHF/UHF gear and to have access to certain test equipment.

Digest>The author has built a 10 GHz. transverter which, when used in tandem with a 2-meter transceiver, will receive and transmit on "X-band", or 10 GHz. One notable thing about this project is that it uses readily available components, nothing exotic or available only from military surplus.

He has built the transverter as a series of building blocks, each connected with the next through plug connectors and coax jumpers. Thus, each block can be tested independently, or changed in future upgrades. In this first instalment, Mr. Lau supplies wiring diagrams, parts lists including recommended sources, and construction details for the local oscillator building blocks.

Near the beginning of the article, he addresses a question that all interested readers must answer for themselves: "Do I have the VHF/UHF construction experience and the test equipment required to handle this project?" It is his opinion that the construction details are not that difficult and he suggests two commonly-available ham publications that give sufficient background information to allow the average construction-minded ham to build the equipment. But the rub comes in tuning the amplifiers, mixer, and filters. He states that it should be possible to accomplish the task with equipment reasonably available to hams, but optimizing the circuits is much easier if one has access to relatively sophisticated bench instrumentation, including a spectrum analyzer.

In a side-bar with the article, Rus Healy, NJ2L, senior assistant technical editor, recommends that anyone who has not had the experience of building a lower-frequency transverter should do so before undertaking the X-band project.

Conceptually, the transverter is easy enough to understand. On the receiver side, the 10 MHz. signal from the antenna goes through a pre-amplifier, a band-pass filter, and into a mixer where it is heterodyned against a local oscillator signal and converted to 144 MHz. output. On the transmitter side, the r.f. output from the 2-meter rig goes to a mixer where it, also, beats against the local oscillator

signal which converts it up to 10 GHz. From the output of the mixer, the signal goes through a band-pass filter, an amplifier, an optional second band-pass filter, and out to the antenna.

The "local oscillator" is actually made up of a crystal oscillator at 106.499 MHz., followed by a series of multipliers, each of which is a separate building block and contains multiple band-pass and low-pass filters with sufficient amplification to overcome the insertion losses. The first building block contains the crystal oscillator and the 6:1 multiplier. The output of that block is a spectrally-pure 639 MHz. signal. Following is a quadrupler block, the output of which is 2.556 GHz. The last block within the local oscillator chain is another quadrupler with a 10.224 GHz. output frequency.

In next month's issue will be the second, and final, installment. It will describe the preamplifer, mixer, and power amplifier to complete the project.

Title>TA2:Single-Conversiion Microwave SSB/CW Transceivers
Author>Campbell, Rick - KK7B
Source>QST May 1993, pp. 21-28
Abstract>Construction details for a microwave transceiver using receiver and transmitter building blocks described in previous articles, plus other components. The transceiver can be built to operate on any band from 432 through 5760 MHz. On the receiver side, the design uses a crystal-controlled converter to feed an i.f. system at 144 MHz.; that system is, itself, a direct-conversion single-signal receiver. The transmitter side is a phasing-type SSB or CW transmitter.

Digest>This is another article by Mr. Campbell who described the "R2" and "T2" PC-board building blocks in his QST articles in the issues of January and April, 1993. This article describes a microwave transceiver that uses them, plus a number of other building blocks, to make a microwave transceiver.

The first block is a "no-tune transverter" designed to be used outdoors at the antenna, utilizing a circuit board available from Down East Microwave Company, Troy, Maine. For this article he used one made for the 903 MHz. band; similar ones can be obtained from the same source for use on bands from 432 through 5760 MHz. In all cases, the units convert the received microwave signals to the 144 MHz. band, and the 144 MHz. transmitter signals to the microwave band.

Inside the shack, Mr. Campbell's system uses a direct-conversion transceiver with 144 MHz. input and output. The block diagram of the 2-meter transceiver shows, on the receive side, an optional i.f. (144 MHz.) preamp feeding into the r.f. input on the R2 board. A variable-frequency 144 MHz. oscillator output passes through a splitter with one-half of the output going through a 90-degree phase-shift network to the "I" and "Q" inputs of the R2 board. The output of the receiver goes to a headphone jack, or directly to a speaker.

On the transmit side, the other half of the oscillator output passes through a similar 90-degree phase-shift network to the "I" and "Q" inputs of the T2 board. The transmitter is actuated by either a key or a microphone, for CW or SSB operation. Its output goes directly to the output terminal.

The remainder of the article is primarily devoted to the design details of two alternate "local oscillator" modules. The first of these is a crystal controlled VXO circuit utilizing a 20.6 MHz. crystal. The output of the oscillator is made a square wave, rich in odd-harmonics. Following the output are two cascaded 144 MHz. band-pass filters that select the seventh harmonic. The tuning capacitor in the VXO circuit allows frequency to be varied, providing a 50 KHz. operating range at 144 MHz.

The other local oscillator circuit that the author describes is a "premixed VFO". By this, he means that an HF oscillator, in this case with a range of 13.0 to 13.12 MHz., is mixed with a 131 MHz. crystal oscillator to provide the 144 output. The circuitry used in this module is conventional.

The author's final comment is: "This article describes one of my favorite applications for the R2 and T2 boards....With the basic transmitter and receiver circuitry contained on a pair of small printed-circuit boards, the possibilities for custom-built radios are limited only by our imaginations."

Title>TA3:Build the HANDI-Finder!
Author>Leskovec, Bob - K8DTS
Source>QST May 1993, pp. 35-38
Abstract>How to build a very simple hand-held direction finder.

Digest>This construction article gives full details for building a simple hand-held direction finder for use in "Fox-Hunting". It can be used in conjunction with an HT for locating AM or FM transmitters over the frequency range of 45 to 470 MHz. The unit is completely built on a printed-circuit board. It uses only about a dozen components, one of which is an IC. The antenna is a "bow-tie" made of stiff wire that is supported by screws on the PC board. A handle attaches to the board at the center of the "bow-tie", completing the unit.

In operation, the circuit rapidly switches its input from one side of the "bow-tie" to the other at an audio rate. When the transmitter to be found is in line with (i.e. in the same plane of) the antenna, one side of the antenna is closer to it than is the other. It receives the signal a tiny fraction of a second earlier than does the other side. This causes a difference in the phase between the two sides, the result of which is phase-modulation that creates an audio tone in the receiver. The tone is determined by the switching frequency.

If the antenna is rotated so that the transmitter is in a line perpendicular to the antenna plane (i.e. "face-on"), then the signal

reaches both sides simultaneously and there is no phase-shift, hence no audio tone. This causes a sharp null in that direction, indicating the direction of the antenna. Note that it is the audio tone that is nulled, not the carrier. It is much easier to detect a null in the audio than a null in the carrier, hence the sensitivity of this unit is excellent. Of course, the null is bi-directional and the ambiguity must be eliminated by triangulation, which usually means that the hunter must move laterally to determine which direction is the true one.

A kit is available containing all the parts necessary except connectors, battery, and the wire antennas. It can be obtained for $27.95 from North Olmstead Amateur Radio Depot, 29462 Lorain Rd., North Olmstead, OH 44070. A PC board template package can be obtained from the ARRL Technical Department Secretary, 225 Main St., Newington, CT 06111 for a business-size SASE. Address it to Leskovec HANDI-Finder Template.

Title>TA4:Add Tracking Side-Tone to Your ICOM IC-765 Transceiver
Author>Mraz, Michael A. - N6MZ
Source>QST May 1993, pp. 39-42
Abstract>Modifications to an ICOM transceiver to allow CW operators to adjust the sidetone pitch to any desired value while the receiver automatically adjusts the received signal to the same pitch.

Digest>In the ICOM IC-765, the sidetone oscillator is fixed at 700 Hz. To adjust the transmitter to the same frequency as a received signal, it is necessary to tune the received signal to zero beat with the sidetone pitch, which requires the operator to listen to the received station always as a 700 Hz. tone. But many CW operators find that tone, or any fixed tone, unpleasant and want to adjust it.

The author has designed and built a circuit which generates a side-tone that tracks the receiving pitch within 1 or 2 Hertz. This article gives full construction details.

The system that Mr. Mraz designed uses an integrated-circuit function generator to generate an audio tone that tracks the setting on the front panel "CW Pitch" adjusting knob. That knob adjusts a potentiometer which, in turn, causes a varying voltage that can be accessed on the main receiver board. However, the relationship between the knob position and the pitch frequency is non-linear! Consequently, he had to add circuitry to cause an equal and opposite non-linearity in his sidetone generator so that the two tones would precisely track.

The author gives detailed instructions concerning how to perform the necessary "surgery" on the ICOM circuit board. He cautions any would-be follower that, if their transceivers are still in warranty, these modifications would void it.

A kit of parts, including etched and drilled circuit board, for building the unit is available for $49.00, plus $2.00 shipping within the USA from LTA, P.O. Box 77, New Bedford, PA 16140.

Title>TA5:An Introduction to Amateur Television - Part 2
Author>Taggart, Ralph E. - WB8DQT
Source>QST May 1993, pp. 43-46
Abstract>A description of the various equipment necessary or desirable to become active in ATV.

Digest>This is the second installment of this description of amateur television (ATV) activities. In this article, the author describes equipment available and other details required in getting started on the air. What he calls an "entry level" ATV setup comprises a TV camera, an ATV 70-cm. transceiver, a TV camera, microphone, an optional power amplifier, and an antenna.

The equipment that he describes is manufactured by three companies, AEA, PC Electronics, and Wyman Research. AEA is a well-known supplier of a broad line of amateur gear, whereas the other two are small proprietorships, each run by a veteran of ATV activities. The last two companies both supply crystal controlled transceivers with power outputs from 1 to as much as 15 watts PEP. Their video output signals are double-sideband amplitude-modulated (AM).

AEA's latest transceiver produces signals very similar to commercial broadcasting standards. It uses "vestigial sideband (VSB)" AM transmission. This means that the signal is a combination of a single-sideband with a carrier.

Most ATV operators use home-style camcorders for their TV cameras, and home-style TV sets for reception. All of the transceivers described produce video outputs switchable to channels 2, 3, or 4 for viewing. In amateur TV, as well as in commercial TV, the audio is transmitted by FM on a sub-carrier which is 4.5 megahertz above, (or both above and below, in the case of AM video) so that it can be reproduced on a standard home-TV set.

PRODUCT REVIEWS
conductor: James W. Healy, NJ2L

Title>PR1:HAL Communications PCI-4000 Clover-II Data Controller
Author>Ford, Steve - WB8IMY
Source>QST May 1993, pp. 71-73
Abstract>Review of a plug-in computer board made by HAL Communications that acts as a data controller for Clover-II communications. A description of the Clover-II protocol is included.

Digest>Clover is a new digital mode for HF communications. It was developed by Ray Petit, W7GHM, working with HAL Communications Company. That company is producing the PCI-4000 for use in an IBM-compatible computer with an 80286 CPU, or later, to control a radio transceiver in

the Clover Mode.

Clover provides much improved data communications in the noisy environment of HF radio, but occupies only 500 Hz. of band-width. It uses four audio tones, each of which is phase- and/or amplitude-modulated in one of 10 schemes. The format with the highest data rate uses 16-phase, 4-amplitude modulation (16P4A), to transmit at a rate of approximately 750 bits/second. Other formats are more robust in resisting noise and fading, but result in slower throughput. There are ten different formats, in all.

Clover's most interesting feature is its adaptive operating. Under varying conditions of propagation and noise, it adapts the power level, and also the modulation scheme, to obtain the maximum throughput of data. Faced with an increase of error rate or dropouts in the data, it automatically raises the power output or changes the modulation format, or both. When conditions improve, it reverses the sequence.

Clover uses the "Reed-Solomon" coding system which provides forward-error-correcting (FEC). Each block of transmitted text contains "check-bytes" which are used to correct many errors without requiring repeats of the data blocks concerned. This is a major step beyond the older digital modes, AMTOR and PACTOR, which verify the successful reception of data blocks but cannot correct them; they can only ask for repeats.

The reviewer found the PCI-4000 easy to install. He used it with a Kenwood TS-820S and found the results were "surprisingly good". On the air, tuning of the signals is very critical. If the transceivers at the two ends of the link differ in frequency by as much as 15 Hz., the link breaks! Consequently, Clover provides a screen display that includes a frequency indicator. It shows the difference between the two signals in Herz at all times. The display also shows a "Receive/ Transmit Status Table". This continuously reports the modulation format in use, signal-to-noise ratio, tuning error, phase dispersion, error-correction capacity, and transmitter power at both ends of the link!

Mr. Ford found one weakness in Clover; that is its "Listen" mode does not perform as well as does AMTOR and PACTOR. That is, it does not receive well when "listening in" to a QSO between two other stations. HAL Communications is reportedly trying to improve it.

In summary, the reviewer calls the Clover system: "Undoubtedly the most efficient HF digital communications mode yet devised for amateur radio." However, its price is of the order of three or four times the cost of AMTOR and PACTOR. Consequently, it will probably be used primarily for handling large quantities of data transfer on HF bands, such as main-line packet forwarding.

Title>PR2:AlphaLab TriField Meter
Author>Overbeck, Wayne - N6NB

Source>QST May 1993, pp. 73-74
Abstract>A review of a meter designed to measure a.c. magnetic field strength. It was found to be subject to errors so severe as to make it useless in radio work.

Digest>The TriField Meter is designed to measure electromagnetic field strength in view of the widespread furor over purported health effects of low-level a.c. fields. It supposedly measures magnetic and electric fields separately and also has a built-in r.f. probe to detect field strength at frequencies of from 50 MHz. to 3 GHz.

The reviewer found that, in the magnetic field modes, the meter gave readings that were consistently too high. The well-written instruction sheet accompanying the meter explains why: although its readings at 60 Hz. are supposed to be accurate, readings are a function of frequency and higher frequencies will give higher readings. But there is no way to measure the frequency of the field that the user is measuring, so it is not possible even to estimate how much in error the measurements are!

The reviewer's final conclusion was that "...its readings are almost certain to be misleading, creating a false sense of security or - more likely - causing undue alarm. It is not hard to envision groups of concerned citizens armed with these meters patrolling their neighborhoods in search of "radiation" - and finding hazards behind every bush!"

HINTS AND KINKS
conductor: David Newkirk, WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Build a Quick PVC-Supported Quad for About $50
Author>Evans, Clark J. - WA4DLL
Source>QST May 1993, p. 75
Abstract>Construction details for a square loop antenna.

Digest>This short item includes a dimensioned drawing and construction details for a square loop antenna, which the author calls a "single-element quad". The spreaders, each 28 feet long, are made of 1-inch PVC pipe stiffened with dowel sticks along their entire lengths. The dowel sticks are 4-feet long. Eight of them are required to reinforce each of the two spreaders since they are overlapped 3-inches at the splice between adjacent sticks. They are attached to the PVC pipe by nylon-tape wraps about every two feet.

The bottom leg of the square is horizontal. It is broken at the center with an insulator. Coax feedline is attached at that point. In order to keep the weight of the feedline from causing the lower leg to droop, the author reinforces the spreaders with a 17-foot 8-inch length of 3/4" by 3/4" molding between spreader ends.

The author reports that he operates the antenna on 80, 20, 15, and 10 meters through the use of an antenna tuner. As for performance, he reports: "My DX has increased 10-fold".

Title>HK2:Installing a Huskier 160-M Fixed Capacitor in the Ten-Tec Titan
Author>Lynch, Joe - N6CL
Source>QST May 1993, pp. 75-76
Abstract>Step-by-step instructions for replacing a blown capacitor in the Titan amplifier, manufactured by Ten-Tec.

Digest>Mr. Lynch reports that, when operating his Ten-Tec Titan amplifier, the 160-meter fixed capacitor in the plate tank circuit blew out, and its identical replacement also blew out. He replaced it the second time with a capacitor obtained from Ten-Tec that is rated at three times higher working voltage than the originals (15 Kv. vs. 5 Kv.) Since the replacement capacitor is larger than the originals, he had to make a modification to the amplifier to mount it. He gives complete instructions of how to do this, and illustrates it with a photograph.

Title>HK3:Putting Variometry to Work in Matching Networks
Author>Zavarella, Art - W1KK
Source>QST May 1993, p. 76
Abstract>Using a variometer (variable inductor) in ham gear.

Digest>A variometer is an inductor in two parts, one of which can be moved relative to the other. When the two parts are perfectly in line, the turns of wire in the moveable part add to the turns in the other to form a coil with turns count equal to the sum of the two. If the moveable portion is turned by a full 180-degrees, however, then the field created by its turns subtracts from that of the fixed part, reducing the net inductance. Intermediate positions give intermediate inductances. Thus it becomes a continuously variable inductor without coil taps or moveable contacts.

Mr. Zavarella shows photographs of antenna tuners that he has built using variometers.

Title>HK4:When Antennas Should NOT Be Resonant
Author>Aitken, Hugh - W1PN
Source>QST May 1993, p. 76
Abstract>If the ends are not plugged, tubular Yagi elements resonate acoustically in the wind.

Digest>The writer reports that he erected a new tri-band Yagi antenna but failed to put the plastic end-caps on the elements. Now, when the wind blows the open-ended tubing resonates in the manner of organ pipes! The sounds are very annoying to his family, as well as neighbors.

He recommends that others be more careful and seal the ends of all tubing with caps or plugs.

TECHNICAL CORRESPONDENCE
conductor: Paul Pagel, N1FB
Associate Technical Editor

Title>TC1:Expanded-Range DC and AC Voltmeters
Author>Grebenkemper, John - KI6WX
Source>QST May 1993, pp. 77-78
Abstract>Construction of expanded-range a.c. and d.c. voltmeters.

Digest>The writer provides wiring diagrams and parts lists for contructing either a d.c. or an a.c. voltmeter with an expanded range, more properly termed a "suppressed-zero" meter scale. In other words, instead of reading from 0 to 15-volts, the meter reads from 11- to 15-volts, providing better resolution and accuracy over the operating range.

The meters can be accurately calibrated at both ends of the scale with a trim potentiometer to adjust each end.

Parts kits are available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269. A PC-board and meter-face template package is available from ARRL Technical Department Secretary, 225 Main St., Newington, CT 06111 for a business-size SASE. Address the request to the "Grebenkemper DC and AC Expanded-Range Voltmeter Template".

FEEDBACK (FB)

Title>FB1:QST Apr 1993 Product Reviews
Author>Ford, Steve - WB8IMY and Jeff Bauer -WA1MBK
Source>QST May 1993, pp. 74
Abstract>Errors in Product Reviews in QST April, 1993.

Digest>In the April, 1993 Product Review of the AEA DSP-2232, pp. 65-66, the list price should be $999, not $899. Also the Doppler-shift correction feature has not yet been enabled.

In the same issue's Product Review of the Outbacker antenna, p. 70,the model reviewed was the Perth model, not the JR8. The Perth has a main shaft of 4-foot length with 3-foot whip, whereas the JR8 is 4-feet overall. On 75 meters, the Perth resonates down to 3.6 MHz., as reported, but the JR-8 resonates only between 3.9 and 4.0 MHz.

Title>FB2:Dipoles Above Real Earth
Author>Michaels, Charlie - W7XC
Source>QST May 1993, p. 78
Abstract>Errors in Technical Correspondence item, page 68, QST Nov 1992. Also, Feedback in QST Feb 1993 regarding this same item wrongly changed Equation 1.

Digest>Equations 3-5 of the Michaels letter titled: "Dipoles Above Real Earth" in Technical Correspondence, QST Nov 1992 contained errors. Corrections can be obtained from ARRL's Technical Department Secretary for an SASE. Ask for the Michaels Dipoles Corrections Template.

Also, in QST Feb 1993 Feedback, Michaels advised that an error had been made in Equation 1 of the same 1992 letter. He now states that that was incorrect; Equation 1 as originally published in 1992 is correct.

NEW HAM COMPANION

This section is devoted to articles and short features of special interest to newcomers to the ham radio hobby.

Title>NHC1:And the Most Popular Frequency is...
Author>Mabey, Jay - NU0X
Source>QST May 1993, pp. 60-61
Abstract>A study of frequency distribution of repeaters on the 144 and 430 MHz. bands.

Digest>This summarizes the number of repeaters on each frequency in the 2-meter and 70-centimeter bands throughout the United States and Canada. At last count, there were 6110 2-meter repeaters and 5059 70-centimeter repeaters!

Certain frequencies are much more popular than others. There are 156 repeaters on the single frequency 146.940 MHz. On the 70-centimeter band, things are more spread out. The most popular frequency on that band, 444.500 MHz., has only 23 repeaters.

The article also gives data on the number of "continuous tone-coded squelch systems" (CTCSS). These are systems that require a continuous audio tone to be transmitted by any transceiver that is accessing it. In some cases, they are used to prevent access by anyone other than a small group of members. In other cases, the tone signal required is openly published. On the 2-meter band, there are a total of 694 repeaters using CTCSS, 11 percent of the total. On the 70-centimeter band, there are 1131, or 22 percent.

The author ends the article with a description of the ARRL REPEATER DIRECTORY, of which he is Editor. He says of it: "It is a complete directory of repeaters in the USA and Canada from 10 meters through 23 centimeters."

Title>NHC2:Do You Need an Audio Filter?
Author>Gill, Steven J. - KG7YK
Source>QST May 1993, pp. 62-63
Abstract>Mr. Gill describes what audio filters are and how they are used. He emphasizes their use in CW operations. He also makes mention of digital signal processing (DSP), but does not discuss it in depth.

Title>NHC3:The Doctor is IN p. 64
Author>Various
Source>QST May 1993 - p. 64
Abstract>Questions and answers on topics of primary interest to newcomers.

Digest>In this issue, the questions include: 10-10 numbers, r.f. feedback; the difference between a duplexer and a diplexer; computers for use in ham stations; the illegality of automatic, unattended station operations on HF bands; and what to do if electronic equipment gets water-soaked.

Title>NHC4:A Disguised Flagpole Antenna
Author>Parker, Albert - p. 65
Source>QST May 1993, p. 65
Abstract>A description, with photographs, of a vertical antenna disguised as an attractive flagpole.

Title>NHC5:VHF/UHF Contesting
Author>Ford, Steve - WB8IMY
Source>QST May 1993, pp. 67-69
Abstract>A description of VHF/UHF contests, what they are, and when they take place.

Digest>The author encourages newcomers to participate in VHF/UHF contests and gives hints concerning how to boost one's scores. He also discusses "grid square" designators and includes a map of the USA with grids indicated.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:What Is AMTOR?
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p.61
Abstract>A description of the amateur radio mode: AMTOR - AMateur Teleprinting Over Radio.

Title>RT2:Lightning!
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p. 63
Abstract>Hams are warned to protect their radio equipment from the destructive effects of lightning.

Digest>Antennas should have lightning arrestors with low-impedance leads to ground. All equipment should be protected and, preferably, disconnected from the antenna and also the power mains, when lightning conditions occur.

Title>RT3:The Ionosphere
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p. 66
Abstract>A short description of the ionosphere including a diagram of the atmosphere showing the D, E, F1, and F2 layers. Also discusses the effects of ionization on radio propagation.

Title>RT4:Working the World on 10-Meters
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p. 69
Abstract>A description of propagation conditions on 10-meters.

Digest>Directed primarily to Novice or Technician class amateurs with HF priveleges, it describes the 10-meter band as a "real powerhouse". Even in the present declining phase of the sunspot cycle, exciting propagation happens unpredictably, and beginners are encouraged to monitor the band for openings.

Title>RT5:Is Amateur Radio Safe?
Author>Ford, Steve - WB8IMY
Source>QST May 1993
Abstract>Purported hazards of electromagnetic fields, including radio waves.

Digest>This gives a balanced description of the questions that have been raised about the possible hazards of electromagnetic fields, including radio. Some sensible precautions are outlined for amateurs to follow when working with transmitters.

GENERAL INTEREST ARTICLES

Title>GI1:Festing (Notes of a Hamologist"
Author>Apteryx, Ann - W1NG/7
Source>QST May 1993
Abstract>Humor.

Digest>This is a humorous article in which the author compares people-watching at a hamfest with bird-watching. Among the posited "bird-types" are the purple dealhunter (hunticus bargainicus), the wandering buynothing (optex non-purchasicus), and the lesser cheapskate (pricens reducensis).

Title>GI2:PHASE 3D - A Satellite for All -- Part 1
Author>Jansson, Dick - WD4FAB and Tynan, Bill - W3XO
Source>QST May 1993, pp. 49-51
Abstract>A description of amateur satellites launched in the past, their limitations, and the ground equipment needed to use them; a discussion of why so few amateurs are doing so; and a description of the proposed new Phase 3D satellite now being built.

Digest>The two authors are Vice President of Engineering and President, respectively, of Radio Amateur Satellite Corporation (AMSAT). In this article, they discuss the satellites that have been launched over the past 30 years and the ones that are in orbit now.

They describe the different modes and methods of use that have been utilized in the past and speculate on why so few amateurs have actually tried to use them. They conclude that one reason is that many hams perceive that the technology is too difficult and/or the equipment too expensive for them to be interested. Another seems to be that many hams who are active in VHF and UHF are put off by the fact that satellites do not handle FM.

The authors' rebuttal to the first objection is that the technology of operating through satellites is no more difficult or more expensive than other aspects of amateur radio operating. Regarding FM, they point out that if a satellite were designed for FM repeating, the power requirement would be prohibitive and the number of stations that could access the satellite at any one time would be so severely limited as to make it impractical. They make an adequate case that CW and SSB modes are necessary in satellite operations.

Next, they discuss the kind of station equipment that is needed to take full advantage of the current satellites, especially the high-altitude ones. These, specifically OSCARs 10 and 13, provide nearly world-wide communications to amateurs throughout the world. They are in orbits in which the apogee (the point in the orbit that is farthest from earth) is so high that the satellite appears to move very slowly across the sky and stays visible for several hours each day. They make it possible for hams all over the northern hemisphere to communicate with each other.

Finally, they discuss the new Phase 3D satellite that is under construction at this time. Oscars 10 and 13, the present "high-altitude birds", are reaching the ends of their operating lives. The Phase 3D will be the largest and, by far, the most sophisticated one ever launched. Because of its high-powered transmitters and extra-sensitive receivers, it will be possible for hams all over the world to access it using simpler equipment than is required with Oscars 10 and 13. Furthermore, it will be possible for ground-based repeaters to link with other repeaters long distances away via the satellite! The result may be hams communicating with each other over inter-continental distances using HTs!

Next month, in Part 2 of this article, the authors will discuss design details of the Phase 3D satellite and its orbit.

Title>GI3:Inspiration: N2OVA
Author>Lorito, Philip - WB2HDY
Source>QST May 1993, pp. 52-55
Abstract>The true story of how a terminally ill boy became a ham in his final months on earth.

Digest>This is a human-interest story about a young boy who was suffering from a terminal illness. His strongest wish was to become a radio ham.

The author, and many other individuals, as well as the FCC, cooperated to make the boy's dream come true. His name was Jason Longboat, and his ham call was N2OVA. He received his license in early 1992, and died in November of that year, but his last months on earth were made distinctly happier through ham radio.

Title>GI4:Transmitter Hunting: Tracking Down the Fun - Part 2
Author>Moell, Joe - K0OV
Source>QST May 1993, pp. 56-58
Abstract>Second installment of a description of radio direction finding as a competitive activity.

Digest>In this article, Mr. Moell discusses details of organizing "Fox Hunts" and also describes different kinds of direction-finding equipment. In sidebars included with the article, there are discussions of several different types of RDF instruments that use something other than beam antennas to indicate bearing. One of these is a "homing set". The authors state that a homing set uses a pair of vertical antennas and a control box with a "right-left" indicator such as LEDs. However, they do not describe the principle of operation.

Another type is the time-difference-of-arrival (TDOA) system. This uses two antennas that are switched in sequence at an audio rate. It is the same principle as was discussed in the article: "Build the HANDI-finder!" by K8DTS in this issue.

The last type system described is doppler systems. These are usually mounted on vehicles, since they use multiple antennas (typically 4 or 8) which are rapidly sequenced to simulate a rotating antenna. As the putative antenna rotates, the received signal shifts up and down at an audio rate. The receiver detects this as an audio signal, the phase of which indicates the direction of arrival relative to the heading of the vehicle, and is often displayed on a CRT. This system is capable of giving instant display of heading from a short burst of transmitted signal. However, it is much less sensitive than beam antennas and cannot be carried on foot.

3366. HAMCOMM Help!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 12:16:54 UTC
From: blake@pt5000.pto.ford.com
Message-ID: <blake.61.2D981C36@pt5000.pto.ford.com>
Source record: 269316

I am trying to get HAMCOMM 2.2 working. I build the receive circut and fed it with tape recorded morse. I'm still new at using an O-scope, but I think I'm getting enough signal out of pin 6 of the LM741. If I'm reading the scope right, pin six is about +10v with no audio input, then goes to a +10 to -10 rectangle when audio is presented. The scope function on HAMCOMM show no activity and CW mode is not copying anything. I checked the COM port and it seems OK. Anyone have any ideas on how to find the missing link? I had a friend localy who tried this about a year ago and never got it to work.

Thanks!

3367. AEA Hot Rot whip for HT

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 12:34:55 UTC
From: ah301@yfn.ysu.edu
Message-ID: <ah301-290394073455@sy_j.pgh.wec.com>
Source record: 269317
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.misc

I recently purchased an AEA HotRod 1/2 wave whip antenna from Kevin Jensen N1KCG from rec.radio.swap. He used it in his htx202 and said it was working.

However, when I got the antenna and connected it to my antenna, I did not get better coverage with the hotrod compared to the htx202 rubber duck antenna.
In fact it was worse, what I can reach with the rubber duck antenna, the hotrod antenna cannot.

I do believe Kevin when he said it was working with his ht (although he did not respond to my email when I asked him how come it was not working on mine).

Is there any tuning or fix I can do to make this antenna work ? or was I sold
a broken antenna ? I can still hit repeaters that are very close. I tested

it on an swr meter and its swr is > 3, my rubber duck is < 1.5 !

please email replies if possible
thanks in advance

3371. Hustler Mobile ant help

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 13:45:36 UTC
From: PRENTICE@snycanva.BITNET
Message-ID: <01HAJDWYKBQQ0005MJ@scanva.canton.edu>
Source record: 269321

Hi all. I am planning on going mobile with the quad magnetic mount
for rooftop operations. I also have the Hustler mobile ant system
i/e the various resonators. I do not plan on running them all
on top, but rather just one resonator such as the 75 meter one.
When I want to change bands I will stop and change etc.
My questions are:
1. How to tune the resonators when in place as I have not paperwork
or instructions on this.
2. Any other hints you might have.

I plan on using the kenwood 440s with a dentron super tuner. Yes I know
the super tuner is big, but it is all I have at the moment and other
than size this should not present a problem.

Also I calculate this thing will be about 12 feet plus from the
road up. What dangers might I run into with this ? Surely do not
want to hit any power wires etc..

Again thanks for you input..

>
>*Sigh* Here we go again...
>
>"Quadrature" means exactly what I said above, a 90 degree phase difference.

I know that. I'm not arguing with you, just introducing an alternate
term for the I and Q channel phase relationship. Where I am arguing
with you is on a slightly subtle point. See below.

>: There must be a net 90 degree difference *at any given
>: frequency*, but the phase at say 300 Hz vis 3000 Hz is irrelevant
>: to the SSB generation, but not to the sound.
>
>True, but the way 90-degree phase shift networks work is to generate
>two signals with phases that ramp linearly with frequency, but always
>90 degrees out of phase. If the ramps weren't smooth, the phase
>difference wouldn't be 90 degrees.

Now this is where we differ. What's important to phasing SSB is that
I - Q = 90 degrees at each given frequency. You can have that with
an irregular frequency response as easily as you can with a smooth
declining ramp. What I'm talking about is the phase relationship
between different frequency components of the waveform. Let's assume that
we have two frequencies X and Y. They will have a phase relationship at
input defined as,

X(t) - Y(t) = K(t)

Now if we put this through a transmission media, a blackbox
network we'll call B, then the following condition must apply
if the phase relationship of the complex waveform is to be
maintained.

B(X)(t) - B(Y)(t) = K(t)

But that's not the response we get with a first order smooth
RC network with a declining linear phase delay versus frequency.
I and Q have to have a 90 degree difference, but that can be
generated a number of different ways. We can add delay in one
branch only, so I' = I and Q' = Q + 90. Or we can use lead/lag
networks so that I' = I + 45 and Q' = Q - 45. Or any mixture
in between. All the SSB phasing network cares about is that
there's quadrature at each given frequency. How each frequency
gets quadrature is irrelevant to the phasing exciter, but it's
not irrelevant to the resulting differential phase between two
frequency components of the input.

>: Ask yourself how many
>: milliseconds is a 90 degree phase delay at 300 Hz, then ask yourself
>: how many at 3000 Hz. ...
>
>That's why there is less phase shift at 300 Hz than 3000 Hz (phase ramps
>linearly with frequency, see above.) Linear phase = constant group delay.

I don't see what you're saying here. You need quadrature at every different
frequency, at 300 Hz and at 3000 Hz. The phase shift has to be the *same*
at every frequency (90 degrees), but that means the *delay* declines with
increasing frequency since it takes less delay to get 90 degrees of phase
shift at 3000 Hz than it does at 300 Hz. In other words, the high frequency
components start to outrun the low frequency components as they go through
the network because they suffer less delay. That can be seen in a television
system as chroma/luminance misregistration, also known as differential
phase distortion. Such delay characteristics aren't easily visible in
complex audio waveforms with ordinary scopes, but it certainly can be
heard. That's the click-boom effect I mentioned in the first post where
a percussive strike's high frequency components have outrun the low
frequency components.

>: >Same thing with amplitude flatness. The phase shift network's two
>: >channels must be matched to within a fraction of a dB to get good sideband
>: >suppression.
>
>: Same thing with amplitude flatness. The amplitude has to match *at
>: a given frequency* ...
>
>Again, the way to get amplitude matching is to make both channels flat.

It's *a* way to do that, but it's not necessary, or likely in real
circuits. All that's necessary for the SSB phasing exciter is that
I and Q have the same amplitude at any given frequency. There could
be many db of amplitude difference between two different frequencies

in either the I or Q channel as long as the same difference exists
in the complementary channel at that frequency. In other words, the
bandpass amplitude response could be very lumpy as long as the lumps
in both I and Q match. In fact, with a first order RC network, the
response is going to change by 3 db per octave.

>: >A typical SSB crystal filter has a couple dB peak-to-peak ripple across

>filter with a fraction of a Hz bandwidth, you would have SECONDS of
>delay through the filter. A 9 MHz SSB filter will have similar group
>delay as an audio filter of similar bandwidth and rolloff characteristics.

I've been scratching my head over this. Since the percentage bandwidth at
9 MHz is so small, the Q has to be much higher which translates into more
filter ringing than in the very broad percentage bandwidth AF delay network.
But it seems to me that the differential delay of the lower Q audio filter
would be greater since the delta time span for a 90 degree phase shift is so
much greater for a 5 octave span than for a fraction of an octave span.
Perhaps they equate to the same percentage distortion, but is it the same
kind of distortion?

>operating schedules? They look like this:

>Mode-B: MA 0 to MA 90

>I understand the meaning of the "modes" (tho I'm not familiar with
>Mode-BS).

The ma is mean anomaly. In this case it is mod 256. 0 is the lowest point
in the orbit and 128 is the highest. Satellite tracking programs sometimes
call this Phase.

I believe BS is mode B with the Mode S beacon operating. Due to a problem
the mode S transponder and mode S beacon can not be on at the same time.

3378. HELP! The FCC will not issue me a ham license

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 15:33:17 UTC
From: jwh7k@galen.med.Virginia.EDU
Message-ID: <CnFn7H.L2t@murdoch.acc.Virginia.EDU>
Source record: 269228

On December 18, 1993, I took an ARRL test session and earned a Technician w/HF license. During the week of February 20th, other people that were at the December 18th test session were receiving their new licenses. Not me!
After waiting a week, I called the ARRL to see what was going on.
They had received my paper work and sent it on to the FCC on January 6th.
The gentleman I talked at the ARRL said that licenses from the same test session are not always issued together. After waiting another week, I talked to some experienced local hams and was told to call the FCC. On March 3th, I called the FCC and asked the status of my license. The person I talked to said they have received the paper work from the ARRL, but mine was pulled for some problem. I could not get an answer as to what the problem was with my application. After I reported this information to the local hams, they said to wait and hope the FCC will sort it out. Well, I have waited and no license. It will be 90 days on April 6th since the FCC has had my application. This is my first ham license, I have _not_ had a ham license canceled by the FCC. Does anyone have any ideas what I can do to resolve this problem and finally get a license?
Many thanks for any help and 73

Try the 147.180 repeater in Silver Spring, Maryland.

It does have autopatch (sorry Gary!) but it does
not have any obnoxious beeps, save for the beep
when the controller recovers from a hardware reset.
If it beeps, then something is wrong!

Otherwise, when you talk, it repeats you. When
you quit talking, it gives whatever squelch tail
the MICOR receivers in the voting system decide
to give you, then quits talking about 1.5 seconds
later.

Apples and oranges. The phasing SSB exciter is using an audio
phase shift network, the filter exciter is using a RF filter.
Now the AF phasing network may be considered a sort of filter,
but that's not it's designed purpose, and for sure it's not a
3 kHz bandpass response. Instead it has to maintain a constant
90 degree phase shift across multiple octaves. That's tougher.

I cannot believe what I am reading.

Just when you had built up my respect for you, Gary,
you go a do something like this! :)

Instead of giving them training-wheel beeps to tell when
the repeater has dropped, maybe they should actually
wait a second to see that the other guy has
finished transmitting.

A side benefit is that someone who wants to
break in has the time to do so, maybe even
with an emergency.

I know it's unfashionable to be neighborly
these days, but it can't hurt to try it on
a repeater.

NBS TIME AND FREQUENCY DISSEMINATION SERVICES

Time and Frequency Division
National Measurement Laboratory
National Bureau of Standards
Boulder, Colorado 80303

issued September 1979

FORWARD: This publication presents a description of the time and frequency dissemination services of the National Bureau of Standards. Those interested in information on the NBS atomic clock system, transmitting antennas, or discussion of technological applications of the dissemination services should refer to Section 9, OTHER PUBLICATIONS.

This SPECIAL PUBLICATION 432 will be revised and reissued only as necessary to update information.

INTRODUCTION

The time and frequency community is a small community, generally unknown to the world at large, yet vitally important to many of the basic activities of everyday living. Electric power companies, radio and television stations, telephone companies, and navigators of ships and planes all depend heavily on precise frequency and time information. They must have a constantly available source - a reliable, nationally and internationally recognized STANDARD - with which to compare and regulate their own timing equipment. For over 55 years, the National Bureau of Standards (NBS) has been providing this standard for most users in the United States.
Since the inception of the broadcast services from radio station WWV in 1923, NBS has continually improved and expanded its time and frequency dissemination services to meet the ever-growing needs of an ever-widening community of users. Today, still striving for better ways to serve its public, NBS is making major contributions to the nation's space and defense programs, to worldwide transportation and communications, and to a multitude of industrial operations, as well as providing convenient, highly accurate time service to many thousands of users throughout the world. Services are presently available from stations WWV and WWVB in Fort Collins, Colorado, and from WWVH in Kauai, Hawaii. In addition, services using network television and satellite signals are also available. This booklet is offered as a guide to these services.

1. WWV and WWVH

NBS broadcasts continuous signals from its high-frequency radio stations WWV and WWVH. The radio frequencies used are 2.5, 5, 10 and 15 MHz. WWV also broadcasts on an additional frequency of 20 MHz. All frequencies carry the same program, but because of changes in ionospheric conditions, which sometimes adversely affect the signal transmissions, most receivers are not able to pick the signal on all frequencies at all times in all locations. Except during times of severe magnetic disturbances, however - which make all radio transmissions almost impossible - listeners should be able to receive the signal on at least one of the broadcast frequencies. As a general rule, frequencies above 10 MHz provide the best daytime reception while the lower frequencies are best for nighttime reception.
Services provided by these stations include:

Time announcements, Standard time intervals, Standard frequencies, Geophysical alerts, Marine storm warnings, Omega Navigation System status reports, UT1 time corrections, BCD time code

Figure 1 gives the hourly broadcast schedules of these services along with station location, radiated power, and details of modulation.

Figure 1
*** This section has been SLIGHTLY modified to adopt it more sufficiently to a text file presentation.

The Hourly Broadcast Schedules of WWV and WWVH

W W V B R O A D C A S T F O R M A T

via telephone (303) 499-7111

Longitude: 105 degrees, 02 minutes, 27 seconds West

NBS Radio Station WWV
2000 East County Rd 58
Fort Collins, CO 80524

Standard Broadcast Frequencies and Radiated Power:

2.5 MHz: 2500 Watts
5.0 MHz: 10000 Watts
10.0 MHz: 10000 Watts
15.0 MHz: 10000 Watts
20.0 MHz: 2500 Watts

* BCD TIME CODE on 100 Hz Subcarrier
* Beginning of each hour is identified by 0.8 sec long 1500Hz TONE
* Beginning of each min. is identified by 0.8 sec long 1000Hz TONE
* The 29th and 59th SECOND pulse of each minute is omitted

Hourly Schedule

Minutes after the top of the hour/Broadcast information

00 min Station Identification
02 min 440 Hz 1-HOUR mark
04 min reserved
08 min Storm information
09 min Storm information
10 min Storm information
16 min Omega reports
18 min Geo Alerts, Solar-terrestrial indices
30 min Station Identification

In addition, minutes 45-50 have no audio tones so that storm
forecasts from WWVH can be heard

W W V H B R O A D C A S T F O R M A T

via telephone (808) 335-4363

Latitude: 21 degrees, 59 minutes, 26 seconds North
Longitude: 159 degrees, 46 minutes, 00 seconds West

NBS Radio Station WWVH
PO Box 417
Kekaha, Kauai, HI 96752

Standard Broadcast Frequencies and Radiated Power:

2.5 MHz: 5000 Watts
5.0 MHz: 10000 Watts
10.0 MHz: 10000 Watts
15.0 Mhz: 10000 Watts

* BCD TIME CODE on 100 Hz Subcarrier
* Beginning of each hour is identified by 0.8 sec long 1500Hz TONE
* Beginning of each min. is identified by 0.8 sec long 1200Hz TONE
* The 29th and 59th SECOND pulse of each minute is omitted

Hourly Schedule

Minutes after the top of the hour/Broadcast information

01 min 400 Hz 1-HOUR mark
03 min reserved
29 min Station Identification
47 min Omega reports
48 min Storm information
49 min Storm information
50 min Storm information
59 min Station Identification

In addition, minutes 08-10 and minutes 15-19 have no audio tones so
that informational broadcasts out of WWV can be heard.

*** END figure 1 as edited for text file presentation ***

1a. Accuracy and Stability

The time and frequency broadcasts are controlled by the primary NBS Frequency Standard in Boulder, Colorado. The frequencies as transmitted are accurate to within one part in 100 billion at all times. Deviations are normally less than one part in 1,000 billion from day to day. However, changes in the propagation medium (causing Doppler effect, diurnal shifts, etc.) result in fluctuations in the carrier frequencies as received by the user that may be very much greater than the uncertainty described above.

1b. Antennas and Modulation

The broadcasts on 5, 10, and 15 MHz from WWVH are from phased vertical half-wave dipole arrays. They are designed and oriented to radiate a cardioid pattern directing maximum gain in a westerly direction. The 2.5 MHz antenna at WWVH and all antennas at WWV are half-wave dipoles that radiate omnidirectional patterns.

At both WWV and WWVH, double sideband amplitude modulation is employed with 50 percent modulation on the steady tones, 25 percent for the BCD time code, 100 percent for the seconds pulses, and 75 percent for voice.

1c. Time Announcements

Voice announcement are made from WWV and WWVH once every minute. To avoid confusion, a man's voice is used on WWV and a woman's voice on WWVH. The WWVH announcement occurs first - at 15 seconds before the minute - while the WWV announcement occurs at 7.5 seconds before the minute. Though the announcements occur at different times, the tone markers referred to are transmitted simultaneously from both stations. However, they may not be received at the same time due to propagation effects.
The time referred to in the announcements is "Coordinated Universal Time" (UTC). It is coordinated through international agreements by the International Time Bureau (BIH) so that time signals broadcast from the many stations such as WWV throughout the world will be in close agreement.
The specific hour and minute mentioned is actually the time at the time zone centered around Greenwich, England, and may be considered generally equivalent to the more well-known "Greenwich Mean Time" (GMT). UTC differs from your local time only by an integral number of hours. By knowing your local time zone and using the chart of world time zones in figure 3, the appropriate number of hours to add or subtract from UTC to obtain local time can be determined. The UTC time announcements are expressed in the 24-hour clock system -i.e., the hours are numbered beginning with 00 hours at midnight through 12 hours at noon to 23 hours, 59 minutes just before the next midnight.

1d. Standard Time Intervals

The most frequent sounds hears on WWV and WWVH are the pulses that mark the seconds of each minutes, except for the 29th and 59th seconds pulses which are omitted completely. The first pulse of every HOUR is an 800-millisecond pulse of 1500 Hz. The first pulse of every minute is an 800-millisecond pulse of 1000 Hz at WWV and 1200 Hz at WWVH. The remaining seconds pulses are brief audio bursts (5 millisecond pulses) that resemble the ticking of a clock. All pulses commence at the beginning of each second. They are given by means of a double-sideband amplitude modulation.
Each seconds pulse is preceded by 10 milliseconds of silence and followed by 25 milliseconds of silence to avoid interference which might make it difficult or impossible to pick out the seconds pulses.

1e. Standard Audio Frequencies

In alternate minutes during most of each hour, 500 or 600 Hz audio tones are broadcast. A 440 Hz tone, the musical note A above middle C, is broadcast once each hour. In addition to being a musical standard, the 440 Hz tone can be used to provide an hourly marker for chart recorders or other automated devices.

1f. Official Announcements

Forty-five-second announcement segments are available on a subscription basis to other Federal agencies to disseminate official and public service information. The accuracy and content of these announcement are the responsibility of the originating agency, not necessarily NBS.
Most segments except those reserved for NBS use and the semi-silent periods are available. Arrangements for use of segments may be made through the Time and Frequencies Services Group, 524.06, National Bureau of Standards, Boulder, CO 80303.

+ Omega Navigation System Status Reports

Omega Navigation System status reports are broadcast in voice from WWV at 16 minutes after the hour and from WWVH at 47 minutes after the hour. The international Omega Navigation System is a very low frequency (VLF) radio navigation aid operating in the 10 to 14 kHz frequency band. Eight stations are in operation around the world. Omega, like other radio navigation systems, is subject to signal degradation caused by ionospheric disturbances at high latitudes. The Omega announcements on WWV and WWVH are given to provide users with immediate notification of such events and other information on the status of the Omega system.
For more information about the Omega Navigation System, contact Mr. David Scull, United States Coast Guard HQ, (G-ONSOD 43), Washington, DC 20590.

+ Geophysical Alerts

Current geophysical alerts are broadcast in voice from WWV at
18 minutes after each hour. The messages are changed approximate
every six hours at 1800, 0000, 0600, and 1300 UTC. Part A of the
message gives the solar-terrestrial indices for the day; namely,
the 1700Z solar flux from Ottawa, Canada at 2800 MHz, the estimated
A value for Fredericksburg, Virginia, and the current, Boulder,
Colorado, K-index. Part B gives the solar-terrestrial conditions
for the previous 24 hours, and Part C gives the forecast for the
next 24 hours. If stratwarm conditions exist, a brief advice is
given at the end of the message.

1. Solar activity is classified as:

VERY LOW Usually only quiet regions on the solar disk and no
more than five of these; fewer than ten class-C
subflares without centimetric radio burst of SID
observed or expected.

LOW Usually more than five but less than ten quiet
regions on the solar disk; only class-C subflares
without centimetric radio bursts or SID (sudden
ionospheric disturbances) observed or expected.

MODERATE Eruptive regions on the solar disk; fewer than five
class-M X-ray events with centimetric radio bursts
and SID observed or expected.

HIGH Active regions on the solar disk; several class-M
X-ray events with centimetric radio bursts and
strong SID; and/or one to two importance=2
chromospheric flares or class-X X-ray events
observed or expected.

VERY HIGH Region capable of producing protons on the sun; one
or more chromospheric flares of importance-2 or
greater; with outstanding centimetric radio bursts
(500 flux units or greater), Class-X X-ray bursts,
and major SID observed or expected.

2. The geomagnetic field is classified as:

QUIET A <= 7, usually no K-indices > 2
UNSETTLED 7 < A < 15 usually no K-indices > 3
ACTIVE 15 <= A < 30 a few K-indices of 4

3. The geomagnetic storms are classified as:

MINOR 30 <= A < 50, K-indices mostly 4 and 5
MAJOR A > 50, some K-indices 6 or greater. Sudden
commencements indicated by beginning time to
nearest minute. Gradual commencement indicated by
beginning time to nearest hour.
4. The rest of the report as follows:

SOLAR FLARES

CLASS C any solar X-ray burst with a peak flux at 1-8 angstroms of less than 1 microwatt per square meter

CLASS M a solar X-ray burst with a peak flux at 1-8 angstroms, greater than or equal to 10 but less than 100 microwatts per square meter.

CLASS X a solar X-ray burst with a peak flux at 1-8 angstroms, greater than or equal to 100 microwatts per square meter.

MAJOR SOLAR
FLARE a flare of optical importance (at least 2B - BRIGHT) with a centimetric outburst of 500 flux units or more; or an X-ray event of Class-X intensity of duration 3 hours or more regardless of optical flare importance.

PROTON FLARE protons by satellite detectors (or polar cap absorption by riometer) have been observed in time associated with Ha flare.

SATELLITE LEVEL
PROTON EVENT a proton enhancement detected by Earth orbiting satellites with measured particle flux of at least 10 protons per square centimeter per second per steradian of at least 10 Million electronvolts.

POLAR CAP
ABSORPTION proton-induced absorption at least 2 dB as measured by a 30 MHz riometer located within the polar cap.

STRATWARM reports of stratospheric warmings in the high latitude regions of winter hemisphere of the earth associated with gross distortions of the normal circulation associated with the winter season

Inquiries regarding these messages should be address to NOAA, Space Environment Services Center R43, Boulder, CO 80303. These messages are also available by dialing (303) 499-8129

PROPAGATION FORECASTS

The radio propagation forecasts broadcast on WWV were discontinued on September 30, 1976. Some of the information previously contained in these forecasts is now included in the Geophysical Alert announcements at 18 minutes after each hour. However, neither NBS nor the Space Environment Services Center which sponsors the Geophysical Alerts make radio propagation predictions, nor do they maintain a literature file on the subject. Users interested in further reading material on the effect of solar and geophysical activity on radio propagation should consult the latest edition of the AMATEUR RADIO HANDBOOK, published by the American Radio Relay League.

MARINE STORM WARNINGS

Weather information about major storms in the Atlantic and eastern North Pacific are broadcast in voice from WWV at 8, 9, and 10 minutes after each hour. Similar storm warning covering the eastern and central North Pacific are given from WWVH at 48, 49, and 50 minutes after each hour. An additional segment (at 11 minutes after the hour on WWV and at 51 minutes on WWVH) may be used when there are unusually widespread storm conditions. The brief messages are designed to tell mariners of storm threats in their areas. If there are no warnings in the designated areas, the broadcasts will so indicate. The ocean areas involved are those for which the U.S. has warning responsibility under international agreement. The regular times of issue by the National Weather Service are 0500, 1100, 1700, and 2300 UTC for WWV and 0000, 0600, 1200, and 1800 UTC for WWVH. These broadcasts are updated effective with the next scheduled announcement following the time of issue.
Mariners might expect to receive a broadcast similar to the following:
"North Atlantic weather West of 35 West at 1700 UTC. Hurricane Donna, intensifying, 24 North, 60 West, moving Northwest, 20 knots, winds 75 knots; storm 65 North, 35 West, moving east, 10 knots; winds 50 knots, seas 15 feet."
Information regarding these announcements may be obtained from the Director, National Weather Service, Silver Spring, MD 20910.

1g. "Silent" Periods

These are periods with no tone modulation. However, the carrier frequency, seconds pulses, time announcements, and 100-Hz BCD time code continue.

END TRANSCRIPTION

I have ended the transcription from the original literature here. The remaining material is on WWVB, the 60 kHz sister station to WWV and WWVH, and other totally unrelated topics.

Here's a few more things you might like to know (TRIVIA):

The telephone numbers listed in Figure 1 dial-in directly to the broadcasts of WWV and WWVH. If you don't have a radio, this is the only way to get these broadcasts

The station identification and time-of-day announcement are pre-recorded -- not "live". The announcer for WWV is Don Elliott of Atlanta, Georgia. Mrs. Jane Barbe is the announcer for WWVH, and she is also from Atlanta.

TOURS:

Guided tours are available at all NBS radio station. However, arrangements for visiting the sites should be made in advance with

the EIC. There aren't any 'regular' visiting hours.

Tours of the NBS Boulder Labs, including visits to the atomic clock and the other dissemination services, are available. Information can be obtained from the Program Information Office, NBS, Boulder, CO 80303.

Correspondence pertaining directly to station operations may be address to:

Engineer-in-Charge
NBS Radio Stations WWV and WWVB
2000 East County Road 58

* *
* The following is a closed circuit advisory. According *
* to Newsline Support Fund administrator Norm Chalfin K6PGX, *
* the funds needed to keep Newsline in operation are once *
* again low. According to Norm, it now costs a bit over $850 *
* a month to pay the telecommunications and equipment supply *
* bills. That's up over $150 from the same time last year. *
* For those of you unaware, Newsline pays the cost of *
* three telephones including the one used for news gathering. *
* We also pay for several electronic news and information *
* services, we pay for electronic mail, for raw tape stock *
* and the cost of repairing and updating our production *
* facilities. Over the past year we have had several offers *
* of free or reduced rate E-mail services. While this is *
* very much appreciated, there are several services that are *

* used by the ham radio publications industry that are not *
* available except on a direct basis. Obviously, changing *
* the electronic mail services is not possible unless the *
* entire ham radio publishing wants to make such a move. At *
* this time the industry is not so inclined. *
* Right now, Newsline has enough funds to carry it through *
* to the end of April, but that's it. Therefore we are once *
* again appealing to all of our listeners to assist in any *
* way that you can so that Newsline can continue to being you *

The following is a QST

The FCC names a well known ham to head up its new task force
on personal communications services and a missing young ham has
returned home.

*****
HALLER TO HEAD PCS TASK FORCE

One of the nations best known and most respected ham radio
operators has been selected to guide all personal communications
into the next century and beyond. This, with the naming of FCC
Private Radio Bureau Chief Ralph Haller, N4RH to head the newly
created Commission task force on personal communications
services, better known as the PCS.
The Commission says that the task force will provide a focal
point for all of the PCS issues currently before it and those
yet to surface. The group will would work with all of the FCC's
bureaus and offices that are involved in PCS issues. It will
also be responsible for assuring consistency between policies and
rules for narrow-band and wide-band PCS services.
FCC Chairman Reed Hundt says that he choose Ralph Haller to
head up the task force because he is confident that under his
leadership the group will guide the Commission in the timely
development of a comprehensive regulatory framework for the PCS.
Other members of the task force include FCC Chief Engineer Tom
Stanley, Robert Pepper who is Chief of the Office of Plans and
Policy, Donald Gips the Deputy Chief of Office of Plans and
Policy and FCC Chief Economist Michael Katz.

*****
CLINTON NAMES CHONG TO FCC

President Clinton has selected San Francisco telecommunications lawyer Rachelle B. Chong to fill one of two vacancies at the Federal Communications Commission. Chong, a 34 year old Republican, would become the FCC's first-ever Asian-American commissioner if confirmed by the Senate. She would replace Sherrie Marshall, whose seat at the FCC has been open for nearly a year. Chong's term would last through mid-1997.
President Clinton also intends to nominate Susan Ness, another communications lawyer as a Commissioner. Ness has worked as a senior lender and as group head in the communications industries division of American Security Bank in Washington. During the mid-1970s, she was assistant counsel to the House Banking Committee. She holds a law degree from Boston College Law School and a master's degree in business administration from the Wharton School.

*****
FCC RFI SURVEY

The FCC has released the results of a just completed telephone interference survey and it says that going QRP makes little difference in telephone related RFI.
Thirty-five FCC field offices each picked three random cases of telephone interference on record and then visited the scene. The transmitting stations included 47 Citizens Band; 27 Amateur; 23 AM broadcast; 10 FM broadcast; and one international broadcast station.
At the location experiencing interference, the FCC's Field Operations Bureau personnel would first test the telephones on site, and then test their own RFI immune telephones, as well as several commercially available filters. In all, some 241 different telephones were tested.
Among the FCC's conclusions was that transmitter power did not seem to be a significant factor. In fact, transmitters that ran 10 watts or less caused significant telephone interference in one-third of the cases. The FCC also said that add-on filters provided a cure to the interference problem in only one-third of the incidents investigated.
The study did however conclude that manufacturers can design telephones. The FCC says that it hopes the survey will encourage affected parties to productively address and resolve this problem, but stopped short of ordering the manufacturing community to produce only RFI immune telephones.

*****
SPECTRUM AUCTION

The Federal Communications Commission has taken a first step toward setting the ground rules under which businesses can bid for certain chunks of the airways. On March 8th, the FCC adopted set of so called generic rules for auctioning radio frequencies

for a variety of new services, including the next generation of mobile telephone service called personal communications service. The rules will allow several auctions to be conducted at the same time, require $2,500 as a minimum up-front payment for parties to participate in the auction, set deadlines for payments on winning bid and also set aside a portion of the frequencies to be bid on by individuals or groups composed primarily of women, minorities, rural telephone companies and small businesses. Companies obtaining personal communications services licenses will be able to offer consumers the next generation of mobile phone service, in which the number travels with the phone's owner.
The FCC says that it is exploring various options to submit bids. This includes electronic filing as well as oral and paper bids. A more detailed set of rules for specific services will be decided later. There are no plans now toward any reallocation by auction of the spectrum used by radio amateurs or other communications hobbyists.

*****
WZ1W FOUND

A missing Massachusetts teenager, whose been the object of a nationwide search involving amateur radio, has been found. Nathan A. Taylor, WZ1W, who disappeared in August, was found March 8th in southeast Texas. That's where according to a friend of Taylor's family Nathan was taken into custody by federal authorities.
After nearly seven months, fourteen year old Nathan A. Taylor, is back in his home state of Massachusetts. Paul Topolski, N1IPG, is a friend of the Taylor family.

"He has trouble socializing with his piers and consequently he really didn't want to go back to school." Paul Topolski, N1IPG.

Nathan became heavily involved with computers. That according to Topolski triggered Nathan's actions.

"There's quite an underground network of computer operators on the bulletin boards and so forth. He got involved with the wrong group and consequently enticed into leaving home." Paul Topolski, N1IPG.

Nathan disappearance lead to fears that he was in the company of a man who has a known criminal record. That suggestion was raised after police viewed files on Nathan's computer system. For Nathan's parents in Gardner, Massachusetts the next several months would be filled with anxiety.

"All I know is what his parents have told me about a bus trip from Gardner through Memphis and then that was the last time anybody had seen him. The bus driver in Memphis remembered

seeing him and then that was it, he appeared to jump off the bus at that time. He turned up in Houston, Texas and one evening his parents called me and consequently informed me that he had been arrested by the FBI. He is now back in the Gardner area." Paul Topolski, N1IPG.

Topolski says Nathan still has problems to work out.

"He seems to have calmed down quite a bit too." Paul Topolski, N1IPG.

The last several months have been extremely hard from Nathan Taylors family members. Now they can rest easier as well. Nathan's close ties to ham radio led to a nationwide plea on amateur radio packet systems. Topolski contacted ARRL Section Managers in Texas and Tennessee for assistance. He sent flyers to amateur radio clubs as the part of the effort to locate Nathan.

*****
HI SEAS RESCUE

Two men rescued from a sinking boat in the Gulf of Mexico credit Amateur Radio for saving their lives. Larry Hooker, KB5ZNY, of Thaxton, Mississippi, and his sailing partner, Rett White, were returning from Honduras on Hooker's 35 foot sailing vessel "Off The Hook," when they ran into an unexpected storm and high seas.
Hooker had been in contact with his friend Randall O'Brian, KD5ZH, of West Point, Mississippi, since hoisting anchor on February 6th. The two were keeping regular schedules on 80, 40, and 20 Meters and O'Brian was the first to learn of their difficulties and eventually contacted the US Coast Guard.
O'Brian continued to help provide communication, along with the Coast Guard, who came up on 3.862 MHz.
On March 4th, Hooker and White were taken aboard the Coast Guard cutter Cushing. Their boat was put under tow but subsequently sank.
Hooker had visited his daughter, Tina, KB5YNN, a missionary with Global Outreach in the northeastern part of Honduras. This is an area accessible only by air or sea.

*****
AMSAT NET ON GALAXY 3

Satellite users may be interested in an experiment being conducted in the Houston, Texas area. The group there is uplinking the Houston Area Amsat Net, heard locally on the 147.10 FM repeater, to the Galaxy 3, communications satellite Channel 17, on the 5.8 Mhz audio subcarrier of the Shop-At-Home Channel. The net is carried in realtime on Tuesday evening, from approximately 10 PM Central Standard Time until completion. This

is an experiment but could be continued on a regular basis if interest is sufficient. Send reception reports to Craig Davidson, WD5BDX by packet or direct to his callbook address.

*****
DELPHI

Delphi, a national bbs-type information service and Internet gateway has announced the opening of a special interest group dedicated go radio users in general, and Ham Radio operators in particular. During years past, Ham Radio was supported as a sub-topic on Delphi as part of the Delphi Hobby SIG. Through the efforts of Marty Goodman, KC6YKC and Andy Eddy, WB1FEV Amateur Radio has at last been given a separate special interest group of its own on Delphi.
During its first week of operation beginning March 2nd, this SIG has been able to offer a library of over 300 groups of files for downloading and an active forum. Also in the first week about 30 messages posted every day, with over 300 Delphi members visiting this forum. Those interested in this new SIG should contact Delphi services for more information.

*****
1994 INTERNATIONAL DX CONVENTION

In DX, word that the 1994 International DX Convention is being held at the Holiday Inn, Plaza Park, Visalia, CA, April 15th to the 17th. Friday and Saturday night will see hosted cocktail parties plus a Sunday DX Breakfast and Saturday Night Banquet featuring the 3Y story. The address for information and registration is Don Bostrom, N6IC, at 4447 Atoll Ave., Sherman Oaks, California 91423.

*****
ROBERTS TO SPEAK ARRL SW DIVISION CONVENTION

The man who has developed several high tech motorcycles will be the banquet speaker at the 1994 ARRL Southwestern Division Convention scheduled for later this year. Newsline recently got a call from Division Director Fried Heyn, WA6WZO who told us that its going to be a special night with inventor Steve Roberts N4RVE. Roberts is best known for his development of Behemoth a super high tech motorcycle with on-board computers and ham radio gear. Roberts will not only be speaking at the banquet. He also has promised to bring along one of his super bikes for everyone to see. The 1994 ARRL Southwestern Division Convention is slated for August 26th through the 28th in San Diego. The grand banquet will take place Saturday night August 27th with film maker Dave Bell, W6AQ as master of ceremonies.

*****
DAYTON AWARDS FOLLOW-UP

The 1994 Dayton Hamventions Special Achievement Award goes to
Russ Kroeker, N7HGE of Kent, Washington for his efforts in
implementing the Evergreen Intertie repeater network in the
northwest U.S. and British Columbia. Mr. Kroeker was honored,
but also credited many others.

"It is a great honor and I think that the amateur radio
society will be really delighted to hear that the time that they
spent investing in it, a lot of members have invested their money
to help put the equipment in, and a lot of their time Larry
Babcock, WB7USL put a lot of time in, Mark La Combe, KF7II. These
guys really, I think will be really happy to hear that the work
they put in is getting recognized, in a national way, and it is a
great honor for all of us. We just thank the lord that you folks
did choose us." Russ Kroeker, N7HGE.

Mr. Kroeker will receive his award at the Hamvention Banquet
at the Dayton Convention Center located in downtown Dayton, Ohio
Saturday evening April 30th.
More on the upcoming 1994 Dayton Hamvention next week.

3388. WANTED: MT1000

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 17:17:09 UTC
From: moore@spk.hp.com
Message-ID: <CnFs0L.51v@spk.hp.com>
Source record: 269239

My fire department is looking for used Motorola MT1000s, which I guess have been superceded by the HT1000. We need about three of them pretty quickly.
o cover 154 mHz region
o 16 channel w/ scan

We would also like to acquire the programming cable for these.

Any sources would be appreciated.

3389. Re: World Wide Web Sites wanted!

: I am looking for all pointers to Hypertext sites (World Wide Web sites).
: I know there is a UK callsign server available via WWW.
: What else is there?
: Thanks much!
: PLEASE PLEASE e-mail direct if possible.

Done.

: Scott

Here's a couple: (for everybody's benefit)

* North American Ham Radio WWW server:
http://www.acs.ncsu.edu:80/HamRadio

* United Kingdom Ham Radio WWW Server:
http://www.mcc.ac.uk/OtherPages/AmateurRadio.html

The first server has links to Sarex Information,
North American and United Kingdom callbooks, Bill Pasternak's
Amateur Radio Newsline, and an online Repeater Database.

There is a quiz server being written (to take simulated
tests - generated on the fly), and a searchable index
for the repeater database is in the works too. There is
also a feedback page for you to voice your suggestions
and opinions.

Enjoy!

The information here is a bit fragmented, no?

Ownoing a th78, it has good features, loytso memory, and a bunch of paging
stuff that i will never use
However, it has the best VFO flexibilioty in the game.
I just got to play with a ft-530 and it has some shortcomings in that
department. Namely,
that when you try to monitor 2 meters on the 70cm vfo, or v.v, you
do not have access to your memory programming. The 78 gives you 2
VFOs that are at parity, except for a few freqs via modification.

All dual in band work necessitates direct netry for the off band...
I think that this is a shortcoming. So, who cares about paging! buy
a pager. Not that this feature breaks the radio, but it is a more significant
point that
some other "features".

Note: if the 530 does allow mem recoll on the sub band, OOOPS...

e-mail: Alex.N9KYJ@aol.com (Internet)

Attention all young hams, teaching hams, and other interested hams.
There will be a youth net at the Dayton Hamvention on the first Friday night (April 29, 1994) of the event at 8:00 p.m. (Dayton time) of the Hamvention, this net will be held for approximately for an hour. The youth net will be held on the Miami Valley FM Association N8ACV repeater on 146.64 Mhz (negative 600 input). This is the first time a youth net will be held on a local Dayton repeater during the
Hamvention, so I hope to hear you on the air. If you have any question, please send me a message to my packet address or to my e-mail address. I'll be more than happy to answer any of your questions. 73 DE Alex =>

I would suggest that you get back on the phone to the ARRL. They have had lots
of practice dealing with the FCC on such matters. Let them know exactly what
the FCC folks said to you, and ask if they would please give you a hand in finding
out what's going on. They are very good at clearing up things like this.

Good luck, and let us know how things work out!

I finally finished the Index file for the Boston ARC's hamradio
section on Oakland University's anonymous FTP site oak.oakland.edu

The file is called 00-Index.txt, and is located in the /pub/hamradio
directory.

The format of this file is:

/name of directory/
files a one-line description of each file
within
the
directory

I know this project has been long overdue, but the inclusion of the
archives on the QRZ CD-ROM was just the insentive I needed.

If you do not have direct FTP capability, and would like a copy of the
file, please let me know.

73,
Scott, WY1Z

I can understand the problems with that. Here in So. Ca. the 220 band is so congested, the coordinateing body requires that ALL repeaters be PLed. So it is not a question of allowing a user to select a PL that only his friends will hear him. Using CTCSS allows you listen to the users of your machine but not hear all the rubbish coming from a co-channeled machine.

Actually, we regenerate the PL not just pass it through. Another side benefit of this scheme is that those who use a dual-band mobile as an extender for their hand-helds don't have to wait for the repeater to drop carrier so that their "link" will turn around. We use this system to link two of our repeater together which are close together in frequency allowing the link repeater use a single set of cans and antenna. The linking repeater scans between the outputs of the two repeaters. When it sees a carrier with a PL, it locks on that frequncy and brings up the tansmitter (with PL) to the other repeater. When the person talking quits, the PL on the first repeater is reverse phase keyed causeing the link repeater to imediately reverse pahse key it's PL and resume scanning giving very fast link turn around. While the link is only half duplex, it does have the advantage of not needing any additional link frequencies (a rare commodity in So. Ca.). Our club actually received a citation (commendation) from the FCC for this link system and it's efficeint use of frequency spectrum.

Basically, you could say, we all use what works for us. Different systems have different needs.

3397. W1AW SCHEDULE

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 18:57:19 UTC
From: gswanson@arrl.org
Message-ID: <1994Mar29.185719.10472@arrl.org>
Source record: 269249

W1AW Schedule

Time (EST)	Mode	Days
12 AM	RTTY	Daily
12:45 AM	VOICE	Daily
9 AM	CWs	Wed, Fri
9 AM	CWf	Tue, Thu
10 AM	CWb	Tue-Fri
11 AM	RTTY	Tue-Fri
4 PM	CWf	Mon, Wed, Fri
4 PM	CWs	Tue, Thu, Sat, Sun
5 PM	CWb	Daily
6 PM	RTTY	Daily
7 PM	CWs	Mon, Wed, Fri
7 PM	CWf	Tue, Thu, Sat, Sun
8 PM	CWb	Daily
9 PM	RTTY	Daily
9:45 PM	VOICE	Daily
10 PM	CWf	Mon, Wed, Fri
10 PM	CWs	Tue, Thu, Sat, Sun
11 PM	CWb	Daily

Frequencies (MHz)

CW:	1.818	3.5815	7.0475	14.0475	18.0975	21.0675	28.0675	147.555
RTTY:	-	3.625	7.095	14.095	18.1025	21.095	28.095	147.555
VOICE:	1.855	3.99	7.29	14.29	18.16	21.39	28.59	147.555

Notes:
CW frequencies include code practices, Qualifying Runs and CW bulletins.
CWs = Morse Code practice (slow) = 5 - 7.5 - 10 - 13 - 15 WPM
CWf = Morse Code practice (fast) = 35 - 30 - 25 - 20 - 15 - 13 - 10 WPM
CWb = Morse Code Bulletins = 18 WPM
RTTY= Teleprinter Bulletins = BAUDOT (45.45 baud) and AMTOR-FEC (100 Baud).
ASCII (110 Baud) is sent only as time allows.

Code practice texts are from QST, and the source of each practice is given at the beginning of each practice and at the beginning of alternate speeds.

A DX bulletin replaces or is added to the regular bulletins between 8 P.M. Eastern time Thursdays and 8 P.M. Eastern time Fridays.

On Tuesdays and Saturdays at 6:30 P.M. Eastern time, Keplerian Elements for active amateur satellites are sent on the regular teleprinter frequencies.

In a communications emergency, monitor W1AW for special bulletins as follows: voice on the hour, teleprinter at 15 minutes past the hour, and CW on the half hour.

W1AW is open to visitors during normal operating hours: from 1 P.M. to 1 A.M. on Mondays, 9 A.M. to 1 A.M. Tuesday through Friday, 1 P.M. to 1 A.M. on Saturdays, and from 3:30 P.M. to 1 A.M. on Sundays. FCC licensed amateurs may operate the station from 1 to 4 P.M. Monday through Saturday. Be sure to bring your current FCC amateur license or a photocopy.

Headquarters and W1AW are closed on New Year's Day, President's Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving and the following Friday, and Christmas Day. On the first Thursday of September, Headquarters and W1AW will be closed during the afternoon.

3399. But Seriously

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 19:19:24 UTC
From: greg@netcom.com
Message-ID: <gregCnFxoC.JIF@netcom.com>
Source record: 269250

Since Ed's decided to take this one seriously, I've altered the subject
line so that those who may have dumped the original in their kill files
have the opportunity to participate:

In article <1994Mar29.124149.4266@arrl.org> ehare@arrl.org (Ed Hare (KA1CV)) writes:
>
> [counter-inflammation deleted] this concept has
>some merit. Any ideas for good ways to do this?

The subject is 'what kind of award makes sense for no-code techs?'

At risk of sounding a bit patronizing, I'd look really hard at the
Boy Scout merit-badge and ranking model.

It is set up to encourage the participant to try new things, and to
gain some mastry of them. The result of each of these class of things
is a 'merit badge.' After so many merit badges, in a number of categories
(we want to be well-rounded), the participant is eligable for an award
(i.e. the next level of rank).

So, we can start by listing some things that are worth-while for the
new ham to try, by which s/he'll learn. And some categories to put
those things in (e.g. Technical, Operational, Experimental, Organizational).

And yes, I think a couple of repeater contacts ought to be worth something,
but not in and of itself. Here's a partial list of things that might
score points toward the, Personal Frontiers award:

1. Technical
a. Complete a home-brew antenna project
b. Install a mobile rig in your car
c. Find a cable-TV leak
d. Build a code-practice oscillator
e. Build an HF receiver kit

2. Operational
a. Complete a VHF or UHF simplex QSO of more than
<pick a figure> miles
b. Complete a VHF or UHF QSO on SSB or CW
c. Participate in a fox-hunt
d. Check into a VHF or UHF traffic net
e. Handle a piece of traffic from a PBBS
f. Sign up for an upgrade class
g. Get up to 5 words per minute.

3. Organizational
a. Attend a meeting of a local ham club

b. Provide amateur radio communications at a public event,
under sponsorship of a local amateur radio group
c. Participate in RACES or ARES activities during
an emergency
d. Attend a ham-fest...

I'm sure there are more that can be added. The idea is to figure out the things that new hams can be doing to grow and develop in the hobby/service and both suggest them and recognize an effort towards giving them a try. The list of items has to be big enough so that the issue of 'but we haven't had a natural disaster this year' doesn't really hamper getting a certificate.

I'd limit the award to the first couple of years after licensing, and also to Novice and Technician classes. The idea is to get NEW hams expanding their horizons, trying new things, and into the various organizations.

Windows just doesn't care about real-time. I couldn't get it to work either.
The best menu option in Windows is under the File menu. Its called:
Exit Windows...

Look into a Windows based morse trainer. I'm not sure how they work.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

27 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 27 MARCH, 1994

NOTE: Very intense stratospheric warming exists over northeastern Europe and
Siberia and is spreading into the polar region. The coldest air has
been displaced to southern Greenland/Baffin Island today. The
temperature gradient is reversed between 60N and the polar at 10 HPA
and above. Final warming is in progress.

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares were observed
since yesterday. All regions remain small and fairly inactive.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet at middle latitudes and quiet
to unsettled at high latitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the next day. Recurrent
active conditions are possible on the second and third days.

Event probabilities 28 mar-30 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 28 mar-30 mar

A. Middle Latitudes
Active 15/25/25
Minor Storm 10/25/30
Major-Severe Storm 05/10/10

B. High Latitudes
Active 15/25/25
Minor Storm 10/25/30
Major-Severe Storm 05/10/10

HF propagation conditions were normal over all regions.
Minor signal degradation may begin to be observed over the
higher latitude paths on 29 or 30 March. These slightly
disturbed conditions are expected to persist beyond 31 March.

...keeping in mind, as you do, that malicious interference is illegal,
whether or not you judge the communication being interfered with to
have merit.

To say nothing of the fact that your carrier may interfere with efforts
to bring enforcement actions against the offending stations.

Not to mention that if you really do make a nuisance of yourself, they
will slide up or down a few kHz, probably on top of someone else. This
means that you have now effectively even further reduced the amount
of bandwidth available to civilized users.

All of which leads me to believe that the above is not an appropriate
response to a newcomer's question about how to deal with inappropriate
and anti-social behavior on the bands.

Message-ID: <2n9vkp$57m@bigfoot.wustl.edu>
Source record: 269207

you wroTE:

: On December 18, 1993, I took an ARRL test session and earned a Technician w/HF
: license. During the week of February 20th, other people that were at the
: December 18th test session were receiving their new licenses. Not me!

: it will be 90 days on April 6th since the FCC has had my application. This is
: my first ham license, I have _not_ had a ham license canceled by the FCC. Does
: anyone have any ideas what I can do to resolve this problem and finally get
: a license?

If it's any consolation, I took my test on 23 Dec, and also have not
received my licence. It's getting pretty frustrating, but I am also
currently time-strictened having signed up for more hours that I can
reasonably keep up with. I posted a question about this a few days ago
(maybe a week?) and somebody said that somebody *else* mailed him in
response to his request for more information saying that he had to wait
4 months for a licence. As I don't have any phone numbers to call and
inquire, I am forced to just sit back and wait. Let me know if you
find out anything new!!

>>
>In spite of the uselessness of the rest of the post, this concept has
>some merit. Any ideas for good ways to do this?

I have in front of me the invaluable ARRL Operating Manual and in
the chapter on Operating Awards, the first one mentioned is the Rag
Chewers' Club certificate. It says here this is "often the first
award a new ham aims for.....Chew the rag over the air for at least
a solid half hour". This certificate is "a free ARRL service to
all amateur licensees". Sounds ideal for anyone who just wants to
"yack on two meters".

Personally, I don't think the ARRL should waste its money this way
and encourage new hams to tie up a frequency for a solid half-hour,
but I accept that some people think it is to be encouraged.

3406. Supermorse under windows.?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 19:51:20 UTC
From: fcr@ll.mit.edu
Message-ID: <1994Mar29.195120.22353@ll.mit.edu>
Source record: 269255

I am in the process of trying to configure an IBM compatible PC for my
parents to use. My folks are computer illiterate, so I am trying to make
it as easy as possible for them. My dad, N0OWI, is a no-code tech and
is trying to learn the code, so I put supermorse on the system. I
would like for my dad to be able to call it up under windows, but
no matter what I change in the PIF, I get stutters and missing characters.

Has anybody been successful in getting supermorse to run under windows?
If so, I would appreciate any help that you could give me.

Thanks,
Frank C. Robey N1PKT

3407. STOP SENDING HAMS ON USENET CRAP !!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 20:41:11 UTC
From: dihi@bsdihi.atr.bso.nl
Message-ID: <764973671snx@bsdihi.atr.bso.nl>
Source record: 269256

It happens again and again. Every couple of weeks six tremendous large
files with AMATEURS ON USENET. This times each part from the six even
three times. I think al the FCC's and PTT's like it, because it keeps
my modem so busy....

ok, ok, I know it is a lot of work to keep this list updated and, ok it
is usefull to know who you can reach by usenet. But why not this alternative:

AMATEURS ON USENET: Those interested can download the latest updated
version by ftp form server....

This saves a lot of unnecessary downloadtimes, my phonebill and I must
say some irritation.
What do Y'all think of my idea??

3408. New Award Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 21:13:00 UTC
From: rc@cmr.ncsl.NIst.GOV
Message-ID: <9403292113.AA13416@cmr.ncsl.nist.gov>
Source record: 269257

Deignan and Hare lament the lack of "awards" available to no-code techs. Where have they been?
Two that I can think of are:
1) RCC Rag Chewers Club
2) VUCC VHF UHF Century Club 100 grid squares on 6, or 100 on 2 , less on the higher bands. Yes it does require SOME effort, and more than a handitalkie, but do we want to dumb-down even the operating awards.
3) Various satellite operating awards.
So, there are a number of operating awards available to the no-code ham... and I might point out that DXCC CAN be achieved by a no-coder on six meters, given another good solar cycle.

What say Ed?

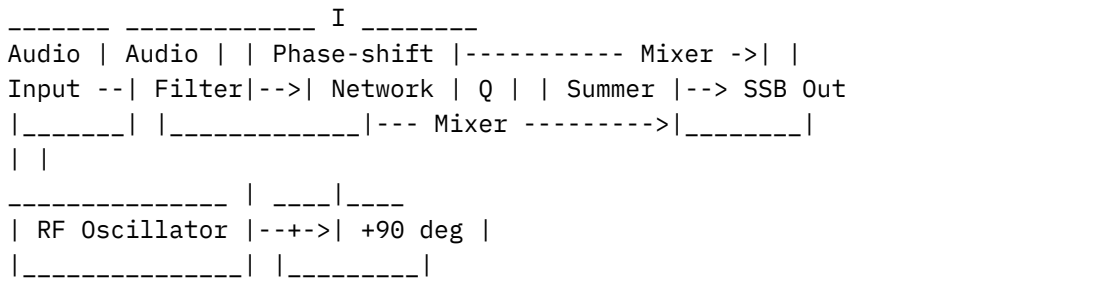
3409. How phasing SSB Exciters Work (Was: RF and AF speech processors)

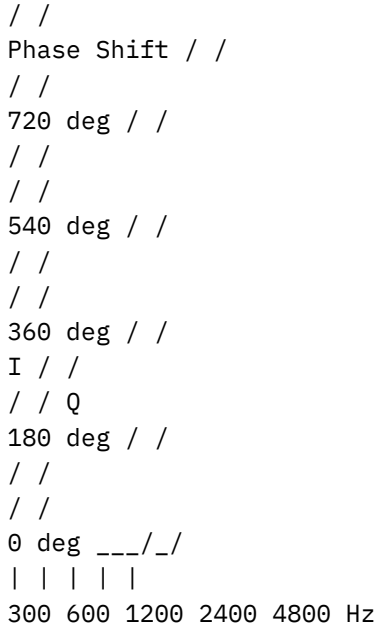
Newsgroup: rec.radio.amateur.misc
Date: 1994-03-29 21:26:17 UTC
From: alanb@sr.hp.com
Message-ID: <CnG3Jt.Htw@srgenprp.sr.hp.com>
Source record: 269258
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

In another thread, I claimed that phasing-type single-sideband generators sound better than filter-type generators because phasing exciters have flatter amplitude and delay response. Gary Coffman disputed that. Rather than respond to Gary's long replies in detail, I'll just summarize how phasing-type SSB exciters work:



I and Q are two audio outputs with a constant phase difference between them of 90 degrees. The input filter limits the audio frequency response to the range of the phase-shift network. The "+90 deg" box can be switched to -90 degrees to get the opposite sideband. (The output of each mixer is a DSB signal.)

The audio phase shift network is the interesting (read difficult) part of the system. It must maintain a 90 degree phase difference and excellent amplitude matching between the two outputs over something like a 10:1 frequency range (300 Hz - 3000 Hz). It generally does that by causing each of the two outputs to have a constantly-rising phase shift versus frequency characteristic, like thus:



Frequency

I may have gotten the scaling off a bit, but the principle is right:
Both channels have constantly-changing phase shifts, but the difference
is always 90 degrees. Note that the frequency scale is logarithmic.
If phase were linear with frequency, then that would equal constant
delay. Since that's not true, there is some variation in group delay
with frequency, but it is a nice smooth curve that has little affect
on audio quality. (As opposed to the crystal filter used in a filter-
type SSB generator which has "bumpy" group delay, expecially at the
high and low band edges.)

The design of the two channels' phase-shift networks is such that
any errors in linearity occur in different places. That means that
you can't make it work properly unless both channels have nice
linear phase versus log(frequency). The same goes for amplitude.
I suppose you could design a diabolical phase-shift network that
had unflat (but matched) frequency response in the two channels,
but why would you do that?

The input audio filter can also add to amplitude or delay distortion.
However, it's not hard to design the filter to minimize the problem.
You don't need the sharp cutoff of a crystal filter designed for
receiving applications because any spurious below 30 or 40 dB down
will be covered up by the transmitter power amplifier's splatter
anyway. Also, audio filters are easier to build accurately than
crystal filters because of the lower Q and lower frequency.

The conclusion: Phasing-type SSB generators have flatter group delay
and amplitude than filter-type generators. You really can hear the
difference in the on-the air signal, in my experience.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: >parts--with real parts its easier at audio...)

: Apples and oranges. The phasing SSB exciter is using an audio
: *phase shift network*, the filter exciter is using a RF filter.

I think Zack was referring to the input audio filter.

: Now the AF phasing network may be considered a sort of filter,
: but that's not it's designed purpose, and for sure it's not a
: 3 kHz bandpass response. Instead it has to maintain a constant

: 90 degree phase shift across multiple octaves. That's tougher.

But the hard part is getting the ampltude and phase matching
to within a fraction of a dB or degree. As explained above, if you
do that, the overall amplitude and delay response versus frequency
will be quite good.

>I plan on using the kenwood 440s with a dentron super tuner.
>WA2MZF in the frozen tundra of northern New York.

Hi James, With an antenna tuner, you can use your 10m Hustler on
17m-10m and maybe even 20m. The 10m Hustler resonator is less
lossy on 17m than the 17m resonator! I use a Radio Shack CB 108 in.
metal whip on 20m-10m with an antenna tuner with good results.
Your 30m resonator will radiate more RF on 40m than your 40m
resonator. Once you get used to a mobile antenna tuner, you'll
never go back to the hassle of changing resonators every time
you change bands.

I would like to know if there are linked repeaters (2m or 70cm)
in the LA area. I know of the LA linked system, I can get access
at home via Sulphur Mountain (WB6ZTU - 447.325). This allows
one to QSO up and down California. I was wondering if any one
knows of another system? I do know there is CONDOR on 220, but
I don't know if there are any repeaters that are cross-linked
from 2m or 440 into that system.

tnx,

>...tell me if I can buy a pair of ham-radios for me and my
>friend in some other country and talk whenever we want?
>Giridhar Tatavarti

Hi Giridhar, Contrary to what you may hear, international schedules are difficult to keep unless Mother Nature is cooperating and you are running maximum legal power and a multi-element beam antenna. We are near the low of a sunspot cycle which has a negative effect upon round-the-world communications and you will be competing with other amateurs who run the legal maximum power and beam antennas.

You can almost always find *A* foreign amateur radio operator to talk to... unfortunately, it may not be *THE* amateur radio operator to whom you wish to talk. I do not mean to discourage you, but we must be realistic about what is possible at any given moment. Last night I could hear no amateurs on SSB above 40 meters.

When I got my HTX202, I found the rubber duck to be a very poor
antenna, and could only hit close repeaters. When I bought the
AEA Hotrod, my performance went up and I can regularly hit repeaters
known to be 40 or 60 miles away. I wouldn't trade mine for anything.
I think your antenna might be broken.

: --

You're going to get a lot of advice on this one, ranging from "go down to the CW subband, everyone's great there" to "bag HF and move up in frequency" to "it's not too bad, don't worry about it."

I guess I'd have to fall pretty much into the third camp. I'd hate to see good operators abandon HF phone due to a few idiots. Yup, there's a bit of obnoxious behaviour out there. Evenings on 75 meters (especially in the General phone band) can be... umm interesting. But for the most part, these folks need not spoil your enjoyment of the hobby. They're there, just as they're everywhere in society. Don't assign them more importance than they should have. Move off a bit and enjoy contacts with some of the fine folks who still inhabit the bands.

I'm fairly new at all of this too, and I don't like some of the behaviour I hear either, but I refuse to let it spoil my enjoyment. I've worked 49 states and quite a bit of DX on 75 phone this winter, and rarely has anyone managed to spoil my fun. I've enjoyed virtually every bit of it. Welcome to the hobby, and hang in there. There're a lot of really good folks to talk to, even on 75 phone!

(PS - Does anybody in Hawaii ever work 75 phone? I'd love to get my last state on the band, but I've never even heard a Hawaiin station, let alone been able to contact one!)

> you need.

I have a Kenwood (No, this isn't witnessing, that's another thread)
TR-7950 2 meter synthesized radio. For quite some time I had one hell
of a problem with intermods caused by a local FM broadcast station and
the Channel 2 TV carrier. It was 5 KHz off of the repeater output we
were all operating Packet on.

I checked with the Kenwood BBS (the holy oracle for those so inclined)
and found a service bulletin describing the same problem. The PIN diodes
used for TR switching of the RF path between the RX and TX sections of the
radio were at fault. I got the replacement diode from RF Parts for under
$10 and the radio has worked like a champ ever since.

Source record: 269273
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Phasing type SSB exciters produce a higher fidelity output
than filter type exciters *using filters of the type typically
found in ham equipment*. If you get high quality filters like
the Lumda FDM telecom filters, you get do just as well with
a filter type exciter. These filters will run you about $125 each.

In any event, if the receiver is a transceiver, and it uses
the same filter for receive and transmit, then all the nasty
ripples you avoided with a phasing type transmitter will
be reintroduced at the receiver. So you really need a phasing
transmitter and phasing receiver to get "hi-fi" audio. Or
use Lumda filters at both ends.

(Lumda is a small outfit that took over the FDM xtal filter
market when the big boys pulled out after T1 replaced FDM for
99% of the telecom market. FDM is still used for phone calls
to Alaska and Hawaii. It's SSB but doesn't sound like ham SSB.)

Chill out guys and gals.....it may not be a perfect world but the people in our club who tested around December 27 got their licenses about ten days ago.

I know it frustrating to wait but everyone seems to have to do it. Some time back there were postings in this group or rec.radio.amateur.misc that the FCC in Gettysburg only issues ham licenses one day per week and that there are delays at the VEC and at the FCC.

Not necessarily so. What does cause the problems with intermods is that
hams want their HT's to perform double duty as a DC to Light scanner.

Not unless you fail to learn how to adjust the receive frequency of your
radio.

Unfortunatly these type are everywhere, the only real cure is to ignore them
and learn to listen somewhere else.

It's about time you figured it out Ed. He would put it on the radio too.
Didn't you read the posts where he describes how he taunts "CB transplants" by
using all sorts of CBisms? I think the justification was to show them how
stupid they sound. (or something equally ridiculous) Kinda reminds mo of
those guys on HF swearing at one another to stop swearing and get off my freq.

cheers,
Dan

The XR-2206 is made by EXAR, and is a monolithic function gernerator. It
makes a sig generator - it can make sine, square, triangle, ramp and
pulse waveforms.

I don't know of any crosses, but most electronics wholesalers ought to be
able to supply EXAR ics.

Hello everyone, I have a question concernong measuring power output from a ramsy FM-10, I have a RADIO SHACK CB Power meter 3 - 30 mhz(its what it said on the box), and i just want to know if hooking this up to my fm-10 will give me an accurate power reading or not, if not how can i convert this reading to that of what i want? The meter goes between the Xmiter and the antenna. Any help would be appreciated.

thanx

I make no attempt to program the radio while moving. This has
nothing to do with the illumination. Simple things like switching
OFF the PL encode, changing the PL tone, and switching to simplex
on the repeater output should be easily accomplished. My eyes aren't
as good as they were when I was younger. Non-illuminated red letters
on a black background are simply a rotten choice of colors. White
letters or translucent letters on a black background would have been
just fine.

>memorized by now. If you hit the wrong button, no harm done.
I ended up in a ditch trying to FIND the button. No harm done.

>I've had mine for two years, and they are all still there. Of course I don't
>use autopatch too much. You forgot to mention that you can't hear the outgoing
>DTMF tones.
Sorry. You can't hear the tones. In my diesel, you can't hear
anything exept the engine, so it's academic. The legends rubbed
off from abrasion on the car seat and my trousers in about a month.
I guess hot stamping the numbers is too much to ask for.

>I screwed the mounting
>bracket into the head and then put the velcro on the other end of the bracket.
>Solid as a rock.
You cheated. You bought the $45 mounting kit. I stuck the velcro
right on the back of the control head. The real problem was that
I don't have a flat spot anywhere on my dashboard.

>>10. The 4 function keys on the microphone use a crud D/A (digital
>>to analog) converter. Moisture condensation has made using these
>>buttons in the morning a real challenge.
>Do you drive around in the rain with the top down? No problems with mine.
Condensation near the ocean (I live near the ocean) is a real problem.

>Yes I made my own reference chart too. You just can't put that many functions
>into a radio and expect to access them with about 9 buttons. We need voice
>commands!
You give up too easy. What's necessary are TWO shaft encoders.
The left one sets the menu item, the right one selects the choice.
A "save" button saves the setting as the default. Most of the
newer and smaller radios are going to something like this.

I've also had some experience with voice control. Good idea
with lots of problems. Not this week.

>>13. The squelch has little or no hysteresis. This is because
>I like that. I want the squelch to be where I set it. If a bad signal breaks
>through, I up the setting. I'm not working moon bounce from my truck though.
Hysteresis does nothing to cause the squelch to move. What it does
is prevent a weak or varying signal from sounding like a machine gun.
I've designed several radios that required quite a bit of human
factors research in squelch action. The Motorola Micor has a
very unique adjustable release time squelch circuit. Kenwood
decided that it's more important to have a smooth squelch adjustment
than a usable signal and threw hysteresis out the window. Obviously,
I don't agree with this. Incidentally, I don't listen to moonbounce
while driving. However, I live in a mountainous area and signals
tend to be weak, choppy, or suffering from multipath.

>My settings were fine. Never had any complaints about the mic gain.
Did you MEASURE them? I did.

>Sure the radio isn't perfect, but as you said, they all seem to have their
>problems. If you want Motorola, you have to PAY for Motorola.
I see. If I want quality, I should buy Motorola. However,
because I'm a ham on a limited budget, I should tolerate design
flaws, mechanical abomonations, human factors atroscities, and
durability problems. It's funny, but when designing commercial
radios, I had the same dumb line thrown at me by the
military-aerospace crowd. I guess hams are suppose to take
any and all abuse because we're so tolerant.

A major stupidity is how the TM732A handles the cross band
repeat and remote control. In cross band, if the transmitter
is on the air, you can't control the radio. Make the mistake
of setting the frequencies backwards on a busy channel, the
only way to disarm the monster is to unplug the antenna and
punch the magic buttons. Same with remote control, but worse.
You can ONLY get out of remote control with another radio using
touch-tones. The only thing you can do at the radio is a total
reset. I'm sure there's a rational reason why one must effectively
lose control of the radio to use these modes.

One nice feature about the radio I forgot to mention. On the
air cloning. Push the magic buttons and the radio disgourges
it's memories and configuration in the form of touch tones on
the air. I make a tape recording of the tones. To reload
the radio, I push the buttons and play back the tape over another
transmitter to the TM732A. I travel a bit and have a seperate
tape for each major city I visit. Not documented anywhere.
It's interesting that Kenwood would not even mention what I
consider a major feature and convenience in the TM732A and TH78A.

Inspite of all these criticisms, I still like Kenwood. My
experiences with other brands are far worse. I own a variety
of other Kenwood radio products and have never had a catastrophic
failure or major problem that I couldn't easily fix.

Hi,

Chip by EXAR Corporation is function generator/FSK generator, whatever.
Used to generate the varying frequency required in SSTV and FAX signals.
Write to EXAR, can't remember where I put the address though :) Sorry

Sadly, reality raises it's ugly head. Without the beep, people were
jumping in when an operator merely drew a breath. If the beep didn't
genuinely serve to smooth the flow of conversation, I wouldn't have
it on there.

That's because you didn't tune *high* enough Cecil. :-)

The amateur satellites are extremely predictable, can offer near global communications, don't require maximum legal power, and aren't as much at the whim of the solar cycle. The phone companies quit using high power HF SSB for international circuits years ago. It's time more amateurs learned they don't need that sort of setup either to work stations in other countries.

3443. Digest of Articles -- QST May 93 (Long - 42k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-30 10:34:20 UTC
From: wvanhorn@magnus.acs.ohio-state.edu
Message-ID: <2nbkjc$8b4@charm.magnus.acs.ohio-state.edu>
Source record: 269194

Followup-To: rec.radio.amateur.misc

Digest of Articles -- QST, May, 1993

Following are digests of articles printed in the May, 1993 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:Home-Brewing a 10 GHz. SSB/CW Transverter - Part 1
Author>Lau, Zack - KH6CP
Source>QST May 1993, pp. 21-28
Abstract>First of a 2-part construction article describing a 10 GHz. transverter. It utilizes only readily-available parts but to build it requires the builder to have had some experience with VHF/UHF gear and to have access to certain test equipment.

Digest>The author has built a 10 GHz. transverter which, when used in tandem with a 2-meter transceiver, will receive and transmit on "X-band", or 10 GHz. One notable thing about this project is that it uses readily available components, nothing exotic or available only from military surplus.

He has built the transverter as a series of building blocks, each connected with the next through plug connectors and coax jumpers. Thus, each block can be tested independently, or changed in future upgrades. In this first instalment, Mr. Lau supplies wiring diagrams, parts lists including recommended sources, and construction details for the local oscillator building blocks.

Near the beginning of the article, he addresses a question that all interested readers must answer for themselves: "Do I have the VHF/UHF construction experience and the test equipment required to handle this project?" It is his opinion that the construction details are not that difficult and he suggests two commonly-available ham publications that give sufficient background information to allow the average construction-minded ham to build the equipment. But the rub comes in tuning the amplifiers, mixer, and filters. He states that it should be possible to accomplish the task with equipment reasonably available to hams, but optimizing the circuits is much easier if one has access to relatively sophisticated bench instrumentation, including a spectrum analyzer.

In a side-bar with the article, Rus Healy, NJ2L, senior assistant technical editor, recommends that anyone who has not had the experience of building a lower-frequency transverter should do so before undertaking the X-band project.

Conceptually, the transverter is easy enough to understand. On the receiver side, the 10 MHz. signal from the antenna goes through a pre-amplifier, a band-pass filter, and into a mixer where it is heterodyned against a local oscillator signal and converted to 144 MHz. output. On the transmitter side, the r.f. output from the 2-meter rig goes to a mixer where it, also, beats against the local oscillator

signal which converts it up to 10 GHz. From the output of the mixer, the signal goes through a band-pass filter, an amplifier, an optional second band-pass filter, and out to the antenna.

The "local oscillator" is actually made up of a crystal oscillator at 106.499 MHz., followed by a series of multipliers, each of which is a separate building block and contains multiple band-pass and low-pass filters with sufficient amplification to overcome the insertion losses. The first building block contains the crystal oscillator and the 6:1 multiplier. The output of that block is a spectrally-pure 639 MHz. signal. Following is a quadrupler block, the output of which is 2.556 GHz. The last block within the local oscillator chain is another quadrupler with a 10.224 GHz. output frequency.

In next month's issue will be the second, and final, installment. It will describe the preamplifer, mixer, and power amplifier to complete the project.

Title>TA2:Single-Conversiion Microwave SSB/CW Transceivers
Author>Campbell, Rick - KK7B
Source>QST May 1993, pp. 21-28
Abstract>Construction details for a microwave transceiver using receiver and transmitter building blocks described in previous articles, plus other components. The transceiver can be built to operate on any band from 432 through 5760 MHz. On the receiver side, the design uses a crystal-controlled converter to feed an i.f. system at 144 MHz.; that system is, itself, a direct-conversion single-signal receiver. The transmitter side is a phasing-type SSB or CW transmitter.

Digest>This is another article by Mr. Campbell who described the "R2" and "T2" PC-board building blocks in his QST articles in the issues of January and April, 1993. This article describes a microwave transceiver that uses them, plus a number of other building blocks, to make a microwave transceiver.

The first block is a "no-tune transverter" designed to be used outdoors at the antenna, utilizing a circuit board available from Down East Microwave Company, Troy, Maine. For this article he used one made for the 903 MHz. band; similar ones can be obtained from the same source for use on bands from 432 through 5760 MHz. In all cases, the units convert the received microwave signals to the 144 MHz. band, and the 144 MHz. transmitter signals to the microwave band.

Inside the shack, Mr. Campbell's system uses a direct-conversion transceiver with 144 MHz. input and output. The block diagram of the 2-meter transceiver shows, on the receive side, an optional i.f. (144 MHz.) preamp feeding into the r.f. input on the R2 board. A variable-frequency 144 MHz. oscillator output passes through a splitter with one-half of the output going through a 90-degree phase-shift network to the "I" and "Q" inputs of the R2 board. The output of the receiver goes to a headphone jack, or directly to a speaker.

On the transmit side, the other half of the oscillator output passes through a similar 90-degree phase-shift network to the "I" and "Q" inputs of the T2 board. The transmitter is actuated by either a key or a microphone, for CW or SSB operation. Its output goes directly to the output terminal.

The remainder of the article is primarily devoted to the design details of two alternate "local oscillator" modules. The first of these is a crystal controlled VXO circuit utilizing a 20.6 MHz. crystal. The output of the oscillator is made a square wave, rich in odd-harmonics. Following the output are two cascaded 144 MHz. band-pass filters that select the seventh harmonic. The tuning capacitor in the VXO circuit allows frequency to be varied, providing a 50 KHz. operating range at 144 MHz.

The other local oscillator circuit that the author describes is a "premixed VFO". By this, he means that an HF oscillator, in this case with a range of 13.0 to 13.12 MHz., is mixed with a 131 MHz. crystal oscillator to provide the 144 output. The circuitry used in this module is conventional.

The author's final comment is: "This article describes one of my favorite applications for the R2 and T2 boards....With the basic transmitter and receiver circuitry contained on a pair of small printed-circuit boards, the possibilities for custom-built radios are limited only by our imaginations."

Title>TA3:Build the HANDI-Finder!
Author>Leskovec, Bob - K8DTS
Source>QST May 1993, pp. 35-38
Abstract>How to build a very simple hand-held direction finder.

Digest>This construction article gives full details for building a simple hand-held direction finder for use in "Fox-Hunting". It can be used in conjunction with an HT for locating AM or FM transmitters over the frequency range of 45 to 470 MHz. The unit is completely built on a printed-circuit board. It uses only about a dozen components, one of which is an IC. The antenna is a "bow-tie" made of stiff wire that is supported by screws on the PC board. A handle attaches to the board at the center of the "bow-tie", completing the unit.

In operation, the circuit rapidly switches its input from one side of the "bow-tie" to the other at an audio rate. When the transmitter to be found is in line with (i.e. in the same plane of) the antenna, one side of the antenna is closer to it than is the other. It receives the signal a tiny fraction of a second earlier than does the other side. This causes a difference in the phase between the two sides, the result of which is phase-modulation that creates an audio tone in the receiver. The tone is determined by the switching frequency.

If the antenna is rotated so that the transmitter is in a line perpendicular to the antenna plane (i.e. "face-on"), then the signal

reaches both sides simultaneously and there is no phase-shift, hence no audio tone. This causes a sharp null in that direction, indicating the direction of the antenna. Note that it is the audio tone that is nulled, not the carrier. It is much easier to detect a null in the audio than a null in the carrier, hence the sensitivity of this unit is excellent. Of course, the null is bi-directional and the ambiguity must be eliminated by triangulation, which usually means that the hunter must move laterally to determine which direction is the true one.

A kit is available containing all the parts necessary except connectors, battery, and the wire antennas. It can be obtained for $27.95 from North Olmstead Amateur Radio Depot, 29462 Lorain Rd., North Olmstead, OH 44070. A PC board template package can be obtained from the ARRL Technical Department Secretary, 225 Main St., Newington, CT 06111 for a business-size SASE. Address it to Leskovec HANDI-Finder Template.

Title>TA4:Add Tracking Side-Tone to Your ICOM IC-765 Transceiver
Author>Mraz, Michael A. - N6MZ
Source>QST May 1993, pp. 39-42
Abstract>Modifications to an ICOM transceiver to allow CW operators to adjust the sidetone pitch to any desired value while the receiver automatically adjusts the received signal to the same pitch.

Digest>In the ICOM IC-765, the sidetone oscillator is fixed at 700 Hz. To adjust the transmitter to the same frequency as a received signal, it is necessary to tune the received signal to zero beat with the sidetone pitch, which requires the operator to listen to the received station always as a 700 Hz. tone. But many CW operators find that tone, or any fixed tone, unpleasant and want to adjust it.

The author has designed and built a circuit which generates a side-tone that tracks the receiving pitch within 1 or 2 Hertz. This article gives full construction details.

The system that Mr. Mraz designed uses an integrated-circuit function generator to generate an audio tone that tracks the setting on the front panel "CW Pitch" adjusting knob. That knob adjusts a potentiometer which, in turn, causes a varying voltage that can be accessed on the main receiver board. However, the relationship between the knob position and the pitch frequency is non-linear! Consequently, he had to add circuitry to cause an equal and opposite non-linearity in his sidetone generator so that the two tones would precisely track.

The author gives detailed instructions concerning how to perform the necessary "surgery" on the ICOM circuit board. He cautions any would-be follower that, if their transceivers are still in warranty, these modifications would void it.

A kit of parts, including etched and drilled circuit board, for building the unit is available for $49.00, plus $2.00 shipping within the USA from LTA, P.O. Box 77, New Bedford, PA 16140.

Title>TA5:An Introduction to Amateur Television - Part 2
Author>Taggart, Ralph E. - WB8DQT
Source>QST May 1993, pp. 43-46
Abstract>A description of the various equipment necessary or desirable to become active in ATV.

Digest>This is the second installment of this description of amateur television (ATV) activities. In this article, the author describes equipment available and other details required in getting started on the air. What he calls an "entry level" ATV setup comprises a TV camera, an ATV 70-cm. transceiver, a TV camera, microphone, an optional power amplifier, and an antenna.

The equipment that he describes is manufactured by three companies, AEA, PC Electronics, and Wyman Research. AEA is a well-known supplier of a broad line of amateur gear, whereas the other two are small proprietorships, each run by a veteran of ATV activities. The last two companies both supply crystal controlled transceivers with power outputs from 1 to as much as 15 watts PEP. Their video output signals are double-sideband amplitude-modulated (AM).

AEA's latest transceiver produces signals very similar to commercial broadcasting standards. It uses "vestigial sideband (VSB)" AM transmission. This means that the signal is a combination of a single-sideband with a carrier.

Most ATV operators use home-style camcorders for their TV cameras, and home-style TV sets for reception. All of the transceivers described produce video outputs switchable to channels 2, 3, or 4 for viewing. In amateur TV, as well as in commercial TV, the audio is transmitted by FM on a sub-carrier which is 4.5 megahertz above, (or both above and below, in the case of AM video) so that it can be reproduced on a standard home-TV set.

PRODUCT REVIEWS
conductor: James W. Healy, NJ2L

Title>PR1:HAL Communications PCI-4000 Clover-II Data Controller
Author>Ford, Steve - WB8IMY
Source>QST May 1993, pp. 71-73
Abstract>Review of a plug-in computer board made by HAL Communications that acts as a data controller for Clover-II communications. A description of the Clover-II protocol is included.

Digest>Clover is a new digital mode for HF communications. It was developed by Ray Petit, W7GHM, working with HAL Communications Company. That company is producing the PCI-4000 for use in an IBM-compatible computer with an 80286 CPU, or later, to control a radio transceiver in

the Clover Mode.

Clover provides much improved data communications in the noisy environment of HF radio, but occupies only 500 Hz. of band-width. It uses four audio tones, each of which is phase- and/or amplitude-modulated in one of 10 schemes. The format with the highest data rate uses 16-phase, 4-amplitude modulation (16P4A), to transmit at a rate of approximately 750 bits/second. Other formats are more robust in resisting noise and fading, but result in slower throughput. There are ten different formats, in all.

Clover's most interesting feature is its adaptive operating. Under varying conditions of propagation and noise, it adapts the power level, and also the modulation scheme, to obtain the maximum throughput of data. Faced with an increase of error rate or dropouts in the data, it automatically raises the power output or changes the modulation format, or both. When conditions improve, it reverses the sequence.

Clover uses the "Reed-Solomon" coding system which provides forward-error-correcting (FEC). Each block of transmitted text contains "check-bytes" which are used to correct many errors without requiring repeats of the data blocks concerned. This is a major step beyond the older digital modes, AMTOR and PACTOR, which verify the successful reception of data blocks but cannot correct them; they can only ask for repeats.

The reviewer found the PCI-4000 easy to install. He used it with a Kenwood TS-820S and found the results were "surprisingly good". On the air, tuning of the signals is very critical. If the transceivers at the two ends of the link differ in frequency by as much as 15 Hz., the link breaks! Consequently, Clover provides a screen display that includes a frequency indicator. It shows the difference between the two signals in Herz at all times. The display also shows a "Receive/ Transmit Status Table". This continuously reports the modulation format in use, signal-to-noise ratio, tuning error, phase dispersion, error-correction capacity, and transmitter power at both ends of the link!

Mr. Ford found one weakness in Clover; that is its "Listen" mode does not perform as well as does AMTOR and PACTOR. That is, it does not receive well when "listening in" to a QSO between two other stations. HAL Communications is reportedly trying to improve it.

In summary, the reviewer calls the Clover system: "Undoubtedly the most efficient HF digital communications mode yet devised for amateur radio." However, its price is of the order of three or four times the cost of AMTOR and PACTOR. Consequently, it will probably be used primarily for handling large quantities of data transfer on HF bands, such as main-line packet forwarding.

Title>PR2:AlphaLab TriField Meter
Author>Overbeck, Wayne - N6NB

Source>QST May 1993, pp. 73-74
Abstract>A review of a meter designed to measure a.c. magnetic field strength. It was found to be subject to errors so severe as to make it useless in radio work.

Digest>The TriField Meter is designed to measure electromagnetic field strength in view of the widespread furor over purported health effects of low-level a.c. fields. It supposedly measures magnetic and electric fields separately and also has a built-in r.f. probe to detect field strength at frequencies of from 50 MHz. to 3 GHz.

The reviewer found that, in the magnetic field modes, the meter gave readings that were consistently too high. The well-written instruction sheet accompanying the meter explains why: although its readings at 60 Hz. are supposed to be accurate, readings are a function of frequency and higher frequencies will give higher readings. But there is no way to measure the frequency of the field that the user is measuring, so it is not possible even to estimate how much in error the measurements are!

The reviewer's final conclusion was that "...its readings are almost certain to be misleading, creating a false sense of security or - more likely - causing undue alarm. It is not hard to envision groups of concerned citizens armed with these meters patrolling their neighborhoods in search of "radiation" - and finding hazards behind every bush!"

HINTS AND KINKS
conductor: David Newkirk, WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Build a Quick PVC-Supported Quad for About $50
Author>Evans, Clark J. - WA4DLL
Source>QST May 1993, p. 75
Abstract>Construction details for a square loop antenna.

Digest>This short item includes a dimensioned drawing and construction details for a square loop antenna, which the author calls a "single-element quad". The spreaders, each 28 feet long, are made of 1-inch PVC pipe stiffened with dowel sticks along their entire lengths. The dowel sticks are 4-feet long. Eight of them are required to reinforce each of the two spreaders since they are overlapped 3-inches at the splice between adjacent sticks. They are attached to the PVC pipe by nylon-tape wraps about every two feet.

The bottom leg of the square is horizontal. It is broken at the center with an insulator. Coax feedline is attached at that point. In order to keep the weight of the feedline from causing the lower leg to droop, the author reinforces the spreaders with a 17-foot 8-inch length of 3/4" by 3/4" molding between spreader ends.

The author reports that he operates the antenna on 80, 20, 15, and 10 meters through the use of an antenna tuner. As for performance, he reports: "My DX has increased 10-fold".

Title>HK2:Installing a Huskier 160-M Fixed Capacitor in the Ten-Tec Titan
Author>Lynch, Joe - N6CL
Source>QST May 1993, pp. 75-76
Abstract>Step-by-step instructions for replacing a blown capacitor in the Titan amplifier, manufactured by Ten-Tec.

Digest>Mr. Lynch reports that, when operating his Ten-Tec Titan amplifier, the 160-meter fixed capacitor in the plate tank circuit blew out, and its identical replacement also blew out. He replaced it the second time with a capacitor obtained from Ten-Tec that is rated at three times higher working voltage than the originals (15 Kv. vs. 5 Kv.) Since the replacement capacitor is larger than the originals, he had to make a modification to the amplifier to mount it. He gives complete instructions of how to do this, and illustrates it with a photograph.

Title>HK3:Putting Variometry to Work in Matching Networks
Author>Zavarella, Art - W1KK
Source>QST May 1993, p. 76
Abstract>Using a variometer (variable inductor) in ham gear.

Digest>A variometer is an inductor in two parts, one of which can be moved relative to the other. When the two parts are perfectly in line, the turns of wire in the moveable part add to the turns in the other to form a coil with turns count equal to the sum of the two. If the moveable portion is turned by a full 180-degrees, however, then the field created by its turns subtracts from that of the fixed part, reducing the net inductance. Intermediate positions give intermediate inductances. Thus it becomes a continuously variable inductor without coil taps or moveable contacts.

Mr. Zavarella shows photographs of antenna tuners that he has built using variometers.

Title>HK4:When Antennas Should NOT Be Resonant
Author>Aitken, Hugh - W1PN
Source>QST May 1993, p. 76
Abstract>If the ends are not plugged, tubular Yagi elements resonate acoustically in the wind.

Digest>The writer reports that he erected a new tri-band Yagi antenna but failed to put the plastic end-caps on the elements. Now, when the wind blows the open-ended tubing resonates in the manner of organ pipes! The sounds are very annoying to his family, as well as neighbors.

He recommends that others be more careful and seal the ends of all tubing with caps or plugs.

TECHNICAL CORRESPONDENCE
conductor: Paul Pagel, N1FB
Associate Technical Editor

Title>TC1:Expanded-Range DC and AC Voltmeters
Author>Grebenkemper, John - KI6WX
Source>QST May 1993, pp. 77-78
Abstract>Construction of expanded-range a.c. and d.c. voltmeters.

Digest>The writer provides wiring diagrams and parts lists for contructing either a d.c. or an a.c. voltmeter with an expanded range, more properly termed a "suppressed-zero" meter scale. In other words, instead of reading from 0 to 15-volts, the meter reads from 11- to 15-volts, providing better resolution and accuracy over the operating range.

The meters can be accurately calibrated at both ends of the scale with a trim potentiometer to adjust each end.

Parts kits are available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269. A PC-board and meter-face template package is available from ARRL Technical Department Secretary, 225 Main St., Newington, CT 06111 for a business-size SASE. Address the request to the "Grebenkemper DC and AC Expanded-Range Voltmeter Template".

FEEDBACK (FB)

Title>FB1:QST Apr 1993 Product Reviews
Author>Ford, Steve - WB8IMY and Jeff Bauer -WA1MBK
Source>QST May 1993, pp. 74
Abstract>Errors in Product Reviews in QST April, 1993.

Digest>In the April, 1993 Product Review of the AEA DSP-2232, pp. 65-66, the list price should be $999, not $899. Also the Doppler-shift correction feature has not yet been enabled.

In the same issue's Product Review of the Outbacker antenna, p. 70,the model reviewed was the Perth model, not the JR8. The Perth has a main shaft of 4-foot length with 3-foot whip, whereas the JR8 is 4-feet overall. On 75 meters, the Perth resonates down to 3.6 MHz., as reported, but the JR-8 resonates only between 3.9 and 4.0 MHz.

Title>FB2:Dipoles Above Real Earth
Author>Michaels, Charlie - W7XC
Source>QST May 1993, p. 78
Abstract>Errors in Technical Correspondence item, page 68, QST Nov 1992. Also, Feedback in QST Feb 1993 regarding this same item wrongly changed Equation 1.

Digest>Equations 3-5 of the Michaels letter titled: "Dipoles Above Real Earth" in Technical Correspondence, QST Nov 1992 contained errors. Corrections can be obtained from ARRL's Technical Department Secretary for an SASE. Ask for the Michaels Dipoles Corrections Template.

Also, in QST Feb 1993 Feedback, Michaels advised that an error had been made in Equation 1 of the same 1992 letter. He now states that that was incorrect; Equation 1 as originally published in 1992 is correct.

NEW HAM COMPANION

This section is devoted to articles and short features of special interest to newcomers to the ham radio hobby.

Title>NHC1:And the Most Popular Frequency is...
Author>Mabey, Jay - NU0X
Source>QST May 1993, pp. 60-61
Abstract>A study of frequency distribution of repeaters on the 144 and 430 MHz. bands.

Digest>This summarizes the number of repeaters on each frequency in the 2-meter and 70-centimeter bands throughout the United States and Canada. At last count, there were 6110 2-meter repeaters and 5059 70-centimeter repeaters!

Certain frequencies are much more popular than others. There are 156 repeaters on the single frequency 146.940 MHz. On the 70-centimeter band, things are more spread out. The most popular frequency on that band, 444.500 MHz., has only 23 repeaters.

The article also gives data on the number of "continuous tone-coded squelch systems" (CTCSS). These are systems that require a continuous audio tone to be transmitted by any transceiver that is accessing it. In some cases, they are used to prevent access by anyone other than a small group of members. In other cases, the tone signal required is openly published. On the 2-meter band, there are a total of 694 repeaters using CTCSS, 11 percent of the total. On the 70-centimeter band, there are 1131, or 22 percent.

The author ends the article with a description of the ARRL REPEATER DIRECTORY, of which he is Editor. He says of it: "It is a complete directory of repeaters in the USA and Canada from 10 meters through 23 centimeters."

Title>NHC2:Do You Need an Audio Filter?
Author>Gill, Steven J. - KG7YK
Source>QST May 1993, pp. 62-63
Abstract>Mr. Gill describes what audio filters are and how they are used. He emphasizes their use in CW operations. He also makes mention of digital signal processing (DSP), but does not discuss it in depth.

Title>NHC3:The Doctor is IN p. 64
Author>Various
Source>QST May 1993 - p. 64
Abstract>Questions and answers on topics of primary interest to newcomers.

Digest>In this issue, the questions include: 10-10 numbers, r.f. feedback; the difference between a duplexer and a diplexer; computers for use in ham stations; the illegality of automatic, unattended station operations on HF bands; and what to do if electronic equipment gets water-soaked.

Title>NHC4:A Disguised Flagpole Antenna
Author>Parker, Albert - p. 65
Source>QST May 1993, p. 65
Abstract>A description, with photographs, of a vertical antenna disguised as an attractive flagpole.

Title>NHC5:VHF/UHF Contesting
Author>Ford, Steve - WB8IMY
Source>QST May 1993, pp. 67-69
Abstract>A description of VHF/UHF contests, what they are, and when they take place.

Digest>The author encourages newcomers to participate in VHF/UHF contests and gives hints concerning how to boost one's scores. He also discusses "grid square" designators and includes a map of the USA with grids indicated.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:What Is AMTOR?
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p.61
Abstract>A description of the amateur radio mode: AMTOR - AMateur Teleprinting Over Radio.

Title>RT2:Lightning!
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p. 63
Abstract>Hams are warned to protect their radio equipment from the destructive effects of lightning.

Digest>Antennas should have lightning arrestors with low-impedance leads to ground. All equipment should be protected and, preferably, disconnected from the antenna and also the power mains, when lightning conditions occur.

Title>RT3:The Ionosphere
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p. 66
Abstract>A short description of the ionosphere including a diagram of the atmosphere showing the D, E, F1, and F2 layers. Also discusses the effects of ionization on radio propagation.

Title>RT4:Working the World on 10-Meters
Author>Ford, Steve - WB8IMY
Source>QST May 1993, p. 69
Abstract>A description of propagation conditions on 10-meters.

Digest>Directed primarily to Novice or Technician class amateurs with HF priveleges, it describes the 10-meter band as a "real powerhouse". Even in the present declining phase of the sunspot cycle, exciting propagation happens unpredictably, and beginners are encouraged to monitor the band for openings.

Title>RT5:Is Amateur Radio Safe?
Author>Ford, Steve - WB8IMY
Source>QST May 1993
Abstract>Purported hazards of electromagnetic fields, including radio waves.

Digest>This gives a balanced description of the questions that have been raised about the possible hazards of electromagnetic fields, including radio. Some sensible precautions are outlined for amateurs to follow when working with transmitters.

GENERAL INTEREST ARTICLES

Title>GI1:Festing (Notes of a Hamologist"
Author>Apteryx, Ann - W1NG/7
Source>QST May 1993
Abstract>Humor.

Digest>This is a humorous article in which the author compares people-watching at a hamfest with bird-watching. Among the posited "bird-types" are the purple dealhunter (hunticus bargainicus), the wandering buynothing (optex non-purchasicus), and the lesser cheapskate (pricens reducensis).

Title>GI2:PHASE 3D - A Satellite for All -- Part 1
Author>Jansson, Dick - WD4FAB and Tynan, Bill - W3XO
Source>QST May 1993, pp. 49-51
Abstract>A description of amateur satellites launched in the past, their limitations, and the ground equipment needed to use them; a discussion of why so few amateurs are doing so; and a description of the proposed new Phase 3D satellite now being built.

Digest>The two authors are Vice President of Engineering and President, respectively, of Radio Amateur Satellite Corporation (AMSAT). In this article, they discuss the satellites that have been launched over the past 30 years and the ones that are in orbit now.

They describe the different modes and methods of use that have been utilized in the past and speculate on why so few amateurs have actually tried to use them. They conclude that one reason is that many hams perceive that the technology is too difficult and/or the equipment too expensive for them to be interested. Another seems to be that many hams who are active in VHF and UHF are put off by the fact that satellites do not handle FM.

The authors' rebuttal to the first objection is that the technology of operating through satellites is no more difficult or more expensive than other aspects of amateur radio operating. Regarding FM, they point out that if a satellite were designed for FM repeating, the power requirement would be prohibitive and the number of stations that could access the satellite at any one time would be so severely limited as to make it impractical. They make an adequate case that CW and SSB modes are necessary in satellite operations.

Next, they discuss the kind of station equipment that is needed to take full advantage of the current satellites, especially the high-altitude ones. These, specifically OSCARs 10 and 13, provide nearly world-wide communications to amateurs throughout the world. They are in orbits in which the apogee (the point in the orbit that is farthest from earth) is so high that the satellite appears to move very slowly across the sky and stays visible for several hours each day. They make it possible for hams all over the northern hemisphere to communicate with each other.

Finally, they discuss the new Phase 3D satellite that is under construction at this time. Oscars 10 and 13, the present "high-altitude birds", are reaching the ends of their operating lives. The Phase 3D will be the largest and, by far, the most sophisticated one ever launched. Because of its high-powered transmitters and extra-sensitive receivers, it will be possible for hams all over the world to access it using simpler equipment than is required with Oscars 10 and 13. Furthermore, it will be possible for ground-based repeaters to link with other repeaters long distances away via the satellite! The result may be hams communicating with each other over inter-continental distances using HTs!

Next month, in Part 2 of this article, the authors will discuss design details of the Phase 3D satellite and its orbit.

Title>GI3:Inspiration: N2OVA
Author>Lorito, Philip - WB2HDY
Source>QST May 1993, pp. 52-55
Abstract>The true story of how a terminally ill boy became a ham in his final months on earth.

Digest>This is a human-interest story about a young boy who was suffering from a terminal illness. His strongest wish was to become a radio ham.

The author, and many other individuals, as well as the FCC, cooperated to make the boy's dream come true. His name was Jason Longboat, and his ham call was N2OVA. He received his license in early 1992, and died in November of that year, but his last months on earth were made distinctly happier through ham radio.

Title>GI4:Transmitter Hunting: Tracking Down the Fun - Part 2
Author>Moell, Joe - K0OV
Source>QST May 1993, pp. 56-58
Abstract>Second installment of a description of radio direction finding as a competitive activity.

Digest>In this article, Mr. Moell discusses details of organizing "Fox Hunts" and also describes different kinds of direction-finding equipment. In sidebars included with the article, there are discussions of several different types of RDF instruments that use something other than beam antennas to indicate bearing. One of these is a "homing set". The authors state that a homing set uses a pair of vertical antennas and a control box with a "right-left" indicator such as LEDs. However, they do not describe the principle of operation.

Another type is the time-difference-of-arrival (TDOA) system. This uses two antennas that are switched in sequence at an audio rate. It is the same principle as was discussed in the article: "Build the HANDI-finder!" by K8DTS in this issue.

The last type system described is doppler systems. These are usually mounted on vehicles, since they use multiple antennas (typically 4 or 8) which are rapidly sequenced to simulate a rotating antenna. As the putative antenna rotates, the received signal shifts up and down at an audio rate. The receiver detects this as an audio signal, the phase of which indicates the direction of arrival relative to the heading of the vehicle, and is often displayed on a CRT. This system is capable of giving instant display of heading from a short burst of transmitted signal. However, it is much less sensitive than beam antennas and cannot be carried on foot.

3444. a magazine called "Short Wave Magazine"

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-30 12:51:35 UTC
From: hrsblackwell@hrs.gsfc.nasa.gov
Message-ID: <hrsblackwell-300394075135@macgwy-mac2.gsfc.nasa.gov>
Source record: 269195

Hi,
I was wondering if anyone could tell me about a magazine called
"Short Wave Magazine". Seems to be a British publication. I've been
getting quite a few correspondances about an article on monitoring the
Space Shuttle. The issue in question is March 1994 "Airband Issue".
I'd like to see what the article promised these individuals.

please respond to hrsblackwell@stars.gsfc.nasa.gov

> time back there were postings in this group or rec.radio.amateur.misc
> that the FCC in Gettysburg only issues ham licenses one day per week and
> that there are delays at the VEC and at the FCC.

This is true, but the VEC licensing system requires (I think; I don't have my FCC Rule book in front of me right now) that one way or another, license applications must be acted on within 90 days. All the hysterics here about involving various politicians are, IMNSHO, a little rediculous. Someone said it here before, but I will repeat it again because it has been the best advice to date:

Wait a bit (maybe until after the Easter Weekend) and then give the ARRL/VEC a call and explain to them the situation. At the least, they can tell you when the paperwork went over to the FCC and they will probably be able to help you find out what the snag is.

/Matthew

TTARS, The Tennessee Technological Univeristy Amateur Radio Society is proud to announce a Special Events station. The station will be tested on Friday April 15 and be on the air Saturday April 16 and Sunday April 17. The purpose of the special events station is to demonstrate the effectiveness of low power HF communications on both SSB and CW.

The event will take place in remote sections of Fall Creek Falls state park in Tennessee. We will be testing out the new MFJ 20 meters SSB travel radio, some new QRP CW transceivers and hopefully some other new toys.

For a nice certificate send a 9X12 SASE with QSL card and contact number to:

TTARS
Tennessee Tech. U.
Box 5262
Cookeville, TN 38505

*probably start afternoon of Friday April 15.

Sat. April 16 and Sunday April 17

14:00-16:00Z (7.250-2.270)
(7.055-7.065)

16:00-17:00Z (14.250-14.265)
(14.055-14.065)* if enough ops

17:00-18:00Z (28.350-28.365)

18:00-20:00Z (21.250-21.265)
(21.050-21.065)*

20:00-22:00Z (14.250-14.265)
(10.110-10.115)*

22:00-24:00Z (7.250-7.270)

00:00-02:00Z (3.900-3.915) or
(7.250-7.270)

==========

* we will operate on whichever band has best propogation. We will attempt to stay with the above frequencies as much as possible. The way conditions have been lately, 20 meters

will most likely be our main backup band.

thanks

3448. ARRL Email Server - periodic announcement

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-30 14:13:39 UTC
From: mtracy@arrl.org
Message-ID: <1994Mar30.141339.6303@arrl.org>
Source record: 269199

Announcement - ARRL Information Email Server (info@arrl.org)

The services that the ARRL provides via the internet include the
Email Information Server and the Technical Information Service.
The Information Server is an automated mail server that gives you
access to many of information files relating to various facets of
Amateur Radio. You can retrieve any or all of these files by
sending an email message to info@arrl.org here at ARRL HQ.
Each file you request is then mailed to you automatically.

To use it, mail messages to:

info@arrl.org

Each line of the message body should contain a command as shown below.
The subject of your message is not processed and may be omitted. You
may place as many commands in a message as you want. The files you
request will be sent to you in separate messages. Only ASCII text
files are supported.

Valid INFO commands:

reply <address> (may be needed - see below for explanation)
help
index
send FILENAME (example: send prospect.txt)
quit

In the above message example, "help" retrieves a brief set of
instructions for info, "index" retrieves a list of available files
and "prospect.txt" retrieves a text file containing information on
becoming a radio amateur.

Note to users with FTP capability: All of these files are also
available by anonymous ftp to ftp.std.com in the
/pub/hamradio/ARRL/Server-files/info area.

If you want to retrieve several text files with one message, use a
separate line for each "send filename" request.

Your From: field or Reply-to: field in your header should contain a
valid Internet address, including full domain name. If your From:
field does not contain a valid Internet address, the answer will not
reach you. If this is the case, then use the reply command as shown
above. When needed, this command should always be the first command
in your message.

IMPORTANT: Please use the quit command in your message. This will prevent processing errors from message signatures.

PLEASE NOTE!: This is an automated system not capable of handling written requests. Any questions on the info-server or the content of any of its files should be directed to mtracy@arrl.org.

ALSO NOTE!: Do *NOT* reply to messages sent from info@arrl.org - the reply address is redirected to keep bounced messages from endlessly looping. Write a new message to info@arrl.org instead.

The Technical Information Service gives League members on the internet better access to the knowledgeable technical staff here at ARRL HQ. Questions relating to Amateur Radio and related technical topics are welcome. To use this service, send a normal e-mail message to tis@arrl.org with your question spelled out in plain english. For best service, be as specific as possible and keep your line length in messages to a maximum of 80 characters. Due to personnel limitations, priority will be given to questions from League members.

Best Regards,

Michael Tracy, KC1SX, ARRL Technical Information Services Coordinator
(e-mail mtracy@arrl.org)

Sample of files available from INFO: (There are lots more!)

Note - If you are not yet an Amateur Radio operator retrieve the file prospect (send prospect) for information on how to easily get started in this fun hobby.

Tsck, Ed; Luck Hurder has at least ONE way to encourage profitable
use of no-code techs: Public Service Awards. I am glad to see that
the PS nets and volunteer efforts, which of course existed before
the no-code was introduced, welcome the use of vhf/uhf operators
whether they got their tech before or after no-code. My oldest son
got a great deal of amateur radio encouragement at the age of 15
when we got him involved with us at public service events. And he
was not the youngest in the net; that honor went to a YL of 14 who
had come up through novice (took her test same time I did as a
matter of fact). Nor was he the only no-coder: that honor went to
the wife of another OM on the net.

We often used 2 meters for the 'local' link of message nets back
in central TX; I suspect thats true in other places. Shouldn't
be too hard to rack up the hours for a very honorable Public Service
Award (see the pages of QST for details :-).

>over packet, otherwise it sends the message over packet to the addressee of
>the message stating that it was not able to be sent, due to obscenities, etc.
> Does that sound plausible?

Plausible, but as Phil Karn pointed out several years ago, what if
someone sent something like this:

```
#####  ##  #####  #  #  ####  ######  #####
#  #  #  #  #  #  #  #  #  #  #  #  #  #  #
#####  #  #  #  #  #  #  #  #  #  #  #  #  #
#  #  #######  #  #  #  ##  #  #  #  ######  #  #
#  #  #  #  #  #  #  ##  ##  #  #  #  #  #  #  #
#####  #  #  #####  #  #  ####  #  #  #####
```

Substitute your favorite bad word for that. How would you screen all
of those out? And how would you catch b*a*d*w*o*r*d or perhaps b a d
w o r d, or would you prohibit Sandy Takeshita from Japan from using
your gateway?

You would have to concede that your screening was perhaps 99%
effective, or maybe 9%, or maybe even 0.9%. Is that good enough for
you? How about for the FCC?

Ultimately, it's still up to you. But remember, there are jerks out
there who will try to cause trouble for the sake of causing trouble.
Many people who set up systems like this require pre-registration in
order to be allowed to use the gateway. This way, you have some level
of trust in your users.

73,
Dave

: >parts--with real parts its easier at audio...)

: Apples and oranges. The phasing SSB exciter is using an audio
: *phase shift network*, the filter exciter is using a RF filter.
: Now the AF phasing network may be considered a sort of filter,
: but that's not it's designed purpose, and for sure it's not a
: 3 kHz bandpass response. Instead it has to maintain a constant
: 90 degree phase shift across multiple octaves. That's tougher.

Actually, what I was writing about was Gary's misconception that
phase distortion is somehow much easier to deal with if you
move the center frequency higher. Its actually tougher--just try
and build a crystal frequency with good phase characteristics
and a good shape factor. (Or, try and buy one...) Of course, it
is true that you need an audio filter for a phasing exciter, as
there are limits to how broad you can make the phase shift network.
Fortunately, there is no requirement to transmit 60 Hz hum with
perfect fidelity.

I would agree that it isn't necessary for a phasing rig to have low
phase and amplitude distortion--I'm sure that someone could work
really hard and come up with one that sounded awful and still
managed to reject the opposite sideband.
The dark side of DSP? :-)
But, in practice, the easiest way to make one to work well is
to just go ahead and design for low distortion.

FWIW, one of the fanatical AM types showed off his phasing
receiver at Deerfield NH a few years ago... Guess he didn't
notice the distortion Gary is worried about. Come to think
of it, I don't recall hearing complaints about the Sony
2010's audio quality, which also uses audio phase shift
networks. (go through the archives of the shortwave newsgroup?)

Hi,

I have some memory chips that I need more info on. Specifically, I
have these chips:

KM41C1000AJ-8
KM41C1000BJ-8 Is this really different from the AJ?
KM41C4000AJ-8
M5M44410AJ A Mitsubishi chip

I am reasonably sure the first two are 1Mbit x 1 chips. I hope the third is a
4Mbit x 1 chip. I hope the fourth is also a 4Mbit x 1 chip, but fear it is a
1Mbit x 4 instead. I intend to use these chips in having some SIMMs made up
for a PC.

In a somewhat related topic. Do any of these companies that build
SIMMS from "your" chips offer to remove the surface mounted chips from existing
PC boards?

TIA,

Source record: 269210

Robert Carpenter (rc@cmr.ncsl.NIst.GOV) wrote:

: Deignan and Hare lament the lack of "awards" available to no-code techs.
: Where have they been?

: Two that I can think of are:

: 1) RCC Rag Chewers Club

Well, although I applaud the encouragement of real contacts with real
conversations, this just seems too easy on VHF simplex or through
a repeater. Keep it around, but we need something more challenging.

: 2) VUCC VHF UHF Century Club 100 grid squares on 6, or 100 on 2 ,
: less on the higher bands. Yes it does require SOME effort, and more
: than a handitalkie, but do we want to dumb-down even the operating awards.

Actually, it requires a LOT of effort with a modest station. The analogy
on HF is that with a 100-watt class station and a dipole, one can
attain DXCC in a year or so of casual operating. Some have even done
it in a single contest weekend, or come real close, at any rate. Perhaps
a 100-watt/dipole combination is a "typical" HF modest station. On VHF,
a 10-watt station with a ground plane might be more typical. How easy
is it to work 100 grids on 2 meters with that combination? Those
who want to pursue the award, including Technicians, can do so,
but it seems that it is really tailored toward the effective weak-signal
station. I don;t propose that we make a no-work award, just one that
has enough meaning to make it worthwhile, yet can still be done
by the typical VHF station/operator. Do remember that my proposing
an idea carries no more weight than anyone else; when it comes to
awards, I do NOT represent ARRL other than as a member.

: 3) Various satellite operating awards.

: So, there are a number of operating awards available to the no-code ham
: ... and I might point out that DXCC CAN be achieved by a no-coder on six
: meters, given another good solar cycle.

And for that reason, I propose we keep it. But it is probably an order
of magnitude harder than DXCC on 20 meters. I just wonder if we want more
operating awards for other types of operation. All in all, it is not an easy
task -- striking a balance between achievement and attainability.

BTW -- I changed the subject to be the same as the change chosen by Greg
Bullough, just to keep the thread intact. (I liked Greg's idea a lot,
BTW BTW.)

It's made by EXAR and is very common. Jameco Electronics (1-800-237-6948)
lists it as part #34972 and sells it for 3.75 in quantity 1. Jameco's
address is 1355 Shoreway Road, Belmont, CA 94002-4100.

Source record: 269213

Marc B. Grant (marcbg@netcom.com) wrote:

: The ARRL Letter Vol. 13, No. 6 March 24, 1994

: FCC surveys telephone interference, says manufacturers could do better

: The FCC has released the results of a telephone interference survey
: and concluded that since some telephones are "bulletproof," all of them
: could be.

I must point out that the FCC "bullet-proof" telephones were all
of the modified non-electronic type. Although they were indeed immune
in 96% of the cases, it is not nearly as easy to make a telephone
that contains lots of active devices so absolutely immune. It can
be done; it is just not as easy.

: Thirty-five FCC field offices each picked three random cases of
: telephone interference on record and then visited the scene. The
: transmitting stations included 47 citizens band, 27 amateur, 23 AM
: broadcast, 10 FM broadcast, and one international broadcast station (none
: were specifically identified).

Interstingly, even though there were 27 hams involved, not one
let us know, or asked for any of our RFI help. :-)

: Among the FCC's conclusions was that transmitter power did not seem
: to be a significant factor; they said that 10 watts or less caused
: telephone interference in one-third of the cases.

Well, even though a 10-watt signal can cause interference, higher
power would cause interference over a larger area.

: The FCC also said that filters worked only one-third of the time.
: "Manufacturers can design telephones to be interference free," the
: Commission said, citing its bulletproof telephones, which were immune
: from interference "virtually all of the time."

There are many different reasons that filters only work "one-third of
the time." The phyisical location of the filters can be quite important.
While in most cases, it is best to install the filter right at the
phone, one must consider that the filter usually works best when
installed at an RF low-impedance point in the telephone wiring. The
location of the best point can be difficult to find.

Filters are also designed to be optimum over a specific frequency
range. The HF filter installed to correct an interference problem
caused by a VHF station should not be expected to work.

The FCC report also did not indicate whether any combination of
line and hand-set cord filters were tried. All in all, the CORRECT
application of telephone-EMI filters should be expected to work in
more than 33% of the cases.

: If you would like a copy of the survey, which includes a list
: of telephone models checked, send an SASE with two units of first class
: postage to the Technical Information Service at ARRL HQ.

Please also include a specific request for the "EMI/RFI-Telephone-FCC"
Technical Information Service package. An electronic copy of the report
is also available from the ARRL Automated Electronic Mail Server,
info@arrl.org. A copy has been placed on the archives at oak.oakland.edu.

Alan Bloom (alanb@sr.hp.com) wrote:
(concerning the generation of quadrature phase audio signals)

: But the hard part is getting the ampltude and phase matching
: to within a fraction of a dB or degree. As explained above, if you
: do that, the overall amplitude and delay response versus frequency
: will be quite good.

So, just how good is a practical network?

In some recent ARRL pubs (e.g., ARRL Handbook, 1987, pg 18-9) there's
a "matrix" type of phase shift network that claims to be able to give
good performance with loose-tolerance parts. I put this network into
Spice last nite, and thought some might be interested in the
results. Below are four columns plus a frequency column. The
second column is phase of one output channel. The third is that
phase with a constant 235 degrees and a ramp at -.066 degrees/Hz taken out.
The fourth is the magnitude frequency response for that channel.
The fifth is the magnitude frequency response with an additional
5-pole Butterworth low-pass at 3kHz and 5-pole Butterworth high-pass
at 320Hz, to limit the audio passband to the 300Hz-3kHz voice band.

(I hope tabs in the table won't make it unreadable at too many sites.)

freq	phase error	mag	filtered mag
Hz	degrees	degrees	dB	dB
200	-193.5	54.6	2.2	-8.4
230	-203.8	46.4	1.9	-6.1
264	-214.0	38.4	1.6	-4.0
303	-224.4	30.6	1.3	-2.3
348	-234.9	23.1	1.0	-1.2
400	-245.6	15.8	0.7	-.5
459	-256.5	8.8	.5	-.1
527	-267.6	2.3	.3	0
606	-278.8	-3.8	.2	0
696	-290.2	-9.2	.1	0
800	-301.6	-13.8	0	0
919	-313.1	-17.4	0	-.1
1056	-324.5	-19.9	0	-.1
1213	-335.9	-20.9	0	0
1393	-347.1	-20.2	.1	0
1600	-358.4	-17.8	.2	0
1838	-369.5	-13.2	.4	0
2111	-380.4	-6.1	.6	-.1

2425 -391.1 3.9 .8 -.5
2786 -401.7 17.2 1.1 -1.2
3200 -411.8 34.3 1.3 -2.4
3676 -421.5 56.1 1.6 -4.1

Note: I didn't calc the phase error including the Butterworth filters, which are NOT linear phase, but better than the Chebyschev typically approximated in a crystal filter.

The exact meaning of the "phase error" column is certainly open to discussion, but to me it's obvious that it's a very low error, and quite smooth with frequency. And both the magnitude columns show extremely good flatness in the voice band: particularly the one including the out-of-band audio filters.

I didn't include columns about the phase and amplitude difference between the channels, but it's a very close match in both.

(I hope to follow this with another followup about actually achieving 90 degree phase differentials with a finite number of poles and zeros, but that will have to wait for now.)

>The best thing is to listen verrry carefully to one before you buy.
>Don't even think of buying one un-listened to unless you have $$ to
>throw away.

>W7LZP

I don't have any of these problems that you mention, but it took me a day of playing around with it to get used to it. I found that I could pretty much eliminate any unusual sound effects by using my Icom 735's RIT and passband tuning in conjunction with the DSP filter. In other words, just sending "raw" audio to the filter produced mixed results, but by using the rig's features to enhance the audio that the filter receives, the filter performs very well.

By the way, I built the DSP filter kit sold by Quantics. This is a circuit designed by W9GR, and is almost the same filter that is sold ready-to-go by J-comm. Price for the kit is $125 plus $7 shipping. Very high-quality kit. For more info on this kit, see the article "Build Your Own Station Accessories" in QST a couple of issues ago.

The ARRL Laboratory wants to start testing the out-of-band intermod performance of VHF FM rigs and publishing the results in our QST Product Reviews. We are already measuring in-band third-order IMD, so the test methods are established. What I would like is some reports on specific out-of-band IMD problems that are being experienced in metro areas, frequencies, locations, etc. Please send the reports to ehare@arrl.org.

Some of the "IMD" problems being reported are probably receiver image problems, so we are also going to measure and report the image rejection. If anyone has reports of image-response interference, I would like to know about that, too.

Thanks,
73 from ARRL HQ, Ed

> newer ones can select one of 99 channels (synthesized).

I just got back from a long trip to Dallas for a job interview, so
I haven't had any time to play with the sonobuoys yet (they've been
safely sitting under my bed the whole time). I knew the two pins on
the bottom of the buoy had something to do with activating it, but I
was thinking they might be pressure activated (hitting the water and
all) but the salt-water shorting makes a lot more sense - I'll be
careful to make sure they don't get shorted!
I don't seem to see any channel setting switch on the outsides.
On the small one, there is a switch that sets the life from 1 to 3
hours, and the larger one has something that seems similar, with
settings at 1, 3, and 8. On both of them, the number 4 is printed in
large font around the center of the cylinder and on their bottoms.
Here are some other distinguishing numbers:

Small buoy: Large buoy:

Side: Side:
AN/SSQ-41A AN/SSQ-57A
37695 DVK 26479 N00163-78-C-0037
N00019-71-C-0544 LOT 1 37695
LOT 34 <- ROTATE ->
TO
SET DEPTH
300 60
FEET

Bottom: Bottom:
SSQ 4 LAU-111/A
41A N000163-78-C-0037
Depth Selector MFG. NO. 37695 LOT NO. 01
Press to turn
60<->300

I would like to eventually set these up as a 2m FM rig for packet so I can free up my HT for other uses (1W is more than adequate for me here). I understand these sonobuoys only have TX units in them, so if any recommendations can be made on how I can get an RX unit for 2m or convert one of the buoy's TX units to an RX unit, I would appreciate it. Any advice at all on how to go about converting these radios to 2m use would be greatly appreciated.

Yeah, chill out. So what if it takes less time to get a driver
license, handgun permit, etc. We don't want the FCC to be too hasty
here assigning these callsigns.

I have never heard any direct obscenities on the HF bands, but I
do know that they exist. I have heard a few EXTREMELY RUDE operators,
who, when questioned about excessive bandwidth and splatter, were rude to
the point of near swearing.

Along the same lines, to my knowlege there was only one time that
I swore on the air. I had just wrecked my car, smashing into the side of
a mountain cliff. It was about 7 AM, and I autopatched my dad to come
help me. I wasn't hurt, but I was still shaken up.

Dad: "What happened?"

Me: "Well, I'm okay but the car is a little fu***d up."

I didn't realize it at the time I did it. Several hours later it
hit me, and I felt terrible! I never had anyone call or write me
regarding it, so I assume either anyone listening understood that I was
still in shock, or nobody was listening. In either case, I now keep it in
mind every time I key the mike.

Louis

BTW: To all the foul mouthed hams that are out there...there is
still plenty of room on the good old 11 meter (Childrens
Band). Take it down there, and let's keep it clean on
the ham bands!

Well at worst I've stirred up an interesting discussion. :-)

In article <CnG3Jt.Htw@srgenprp.sr.hp.com> alanb@sr.hp.com (Alan Bloom) writes:

>The audio phase shift network is the interesting (read difficult) part
>of the system. It must maintain a 90 degree phase difference and
>excellent amplitude matching between the two outputs over something like
>a 10:1 frequency range (300 Hz - 3000 Hz). It generally does that by
>causing each of the two outputs to have a constantly-rising phase shift
>versus frequency characteristic, like thus:
> / /
>Phase Shift / /
> / /
> 720 deg / /
> / /
> / /
> 540 deg / /
> / /
> / /
> 360 deg / /
> I / /
> / / Q
> 180 deg / /
> / /
> / /
> 0 deg ___/_/
> | | | | |
> 300 600 1200 2400 4800 Hz
> Frequency
>

Now this chart illustrates the problem I've been talking about. As
we can see, the difference in delay with frequency is quite marked.
Sure the phase delay increases *smoothly* with frequency delta, but
the magnitude of the error rapidly climbs with increasing frequency
delta. This is our old friend click-boom. From 600 Hz to 2400 Hz delay
decreases by almost 20%, or about 0.2 ms. That much delay difference
is clearly audible.

If we look at Tom Bruhns' chart for a more complex matrix network:

phase filtered
>freq phase error mag mag
>Hz degrees degrees dB dB
>200 -193.5 54.6 2.2 -8.4

>400 -245.6 15.8 0.7 -.5
>527 -267.6 2.3 .3 0
>606 -278.8 -3.8 .2 0
>696 -290.2 -9.2 .1 0
>800 -301.6 -13.8 0 0
>1056 -324.5 -19.9 0 -.1
>1213 -335.9 -20.9 0 0
>1600 -358.4 -17.8 .2 0
>2111 -380.4 -6.1 .6 -.1
>2425 -391.1 3.9 .8 -.5
>2786 -401.7 17.2 1.1 -1.2
>3676 -421.5 56.1 1.6 -4.1

Now this is much better. The ends are horrible of course, but in the region 600-2400 Hz there is only a delay delta of 0.014 ms. That's hardly audible at all to someone with *good* ears. I'd note that this matrix phase shift network is considerably more complex than typical networks found in older phasing type equipment. And as Richard Karlquist noted, that's all for naught anyway unless the IF filtering of the receiver has correspondingly flat phase delay. Good RF filters can be as flat away from their edges as the matrix above, and RF filters work both ways.

Source record: 269133

I run a Maximus telephone BBS for our ham club, and we've installed a CD drive and the QRZ callsign CD. I attempted to use the QRZ.EXE search engine that is included w/ the CD w/o luck. What happens is this: When redirecting I/O to/from QRZ.EXE and the com port using the required syntax ie:

UsrRemote F:\QRZ_<com1_>com1 Worthy "Callbook"

The program starts fine, except for the following: None of the keys pressed for menu item selection is echoed, and you need to press carriage return twice to register the menu selection you typed. Other than these anomalies, the program works fine. To avoid confusing the user, we wrote a quickie callsign-only search engine to allow use of the callbook, but the users are clamoring for the complete search capability of the QRZ program. I contacted the author of QRZ but he could not duplicate the problem due to not having a Maximus installation to evaluate. He claims that QRZ.EXE works fine w/ most BBS "door" setups, so I suspect that the problem is with Maximus. Does anyone on the net have any experience with Maximus and QRZ???????? Please email any ideas, replies, to me, as I'm only getting the newsgroup digest, and might miss any newsgroup posts.....

Thanks in advance,

Dave Frandin, WA6QNW

Try the 147.180 repeater in Silver Spring, Maryland.

Or 147.045 in Nashua, NH. Or 145.23 in Boston. There are lots around
here that don't beep.

In fact that is some sort of religious issue; the people on the home
machine (147.045) are beep haters; but there's one in the next town
(at 146.73) for those who really like it (plus it has an autopatch)

Message-ID: <765065385-0-11592@gremlin.isca.uiowa.edu>
Source record: 269134

Mike I will be glad to help. First, I am assuming you require the channelization for the US standard analog system (EAMPS). Secondly that you can use a spreadsheet to generate the complete list from my formula.
EAMPS has 832 channels the reverse channel (Mobile TX) is from 824.04 to 848.97 MHz and the Forward channel (Mobile RX) is 869.04 to 893.97 MHz. It should be obvious that this indicates a 45 MHz duplex spacing. The formulas to generate the list are as follows

For Channels 1 to 799:

Reverse Frequency = 825.00 MHz - (.03 * Chan. Number)
Forward Frequency = 870.00 MHz - (.03 * Chan. Number)

For Channels 991 to 1023

Reverse Frequency = 825.00 MHz - (.03 * (1023 - Chan. Number))
Forward Frequency = 870.00 MHz - (.03 * (1023 - Chan. Number))

I know what you are thinking, He said 832 channels yet he has channel 991 to 1023 which are lower in frequency than chan 1 to 799. The reason is because the expansion of cellular has been so great that new frequencies became available a new channel plan was created and well you know the FCC they have trouble counting so we have a screwing channel to frequency assignment. As for the frequency assignment for each cell in your area. Well I do not have access to that type of information and if I did I could not give it you. You can try to contact the cellular carriers in your area but they probably will not givit to you. Good luck

3491. Talking to seismic packages over a radio link

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-30 22:17:47 UTC
From: sak@igloo.essc.psu.edu
Message-ID: <SAK.94Mar30171748@igloo.essc.psu.edu>
Source record: 269135
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,comp.sys.palmtops

Hi all, a novice question on radios and radio-modem links.

I have an experiment where a bunch of seismic packages (refteks) are scattered over the Antarctic ice sheet. They are all within about 40 km of a central site. I would like to interrogate them about their state-of-health from this central site. I don't need a high-speed link (I am not downloading seismic data over the radio, just some relatively small strings of data).

The refteks usually are interrogated by walking up to them, hooking up a little hand-terminal with an rs-232c connection and sending queries and getting back answers. This is a full-duplex connection.

I would like to use VHF radios at approx 10W and a good antenna/tower to get the distance, and get the same functionality, but from the comfort and luxury of my central hut.

My questions:

1. Are there radio transceivers out there that will operate in full-duplex. i.e. transmit *and* receive at the same time, over two different frequencies?

2. Are there modems out there that will work seamlessly with above radios?

3. Are the modems "intelligent". i.e., I want to be able to say "station 6, tell me foo", and only the modem at station 6 passes on the request to the seismic package, and replies with the response. I can't program the refteks to "know their name" --- the refteks are off-the-shelf.

4. I also need to be able to say "all stations, start recording NOW", without having to cycle through "station 1, start", "station 2, start", and on down the list. This is a timing matter. I want to have all the stations turn on at the same time to record an event.

5. And finally, how much approx for each radio/modem? And any pointers on who sells these things would be much appreciated.

6. Some people have said that I can't expect to just walk into Bob's Radios and walk out with a radio. That there are all sorts of FCC this-n-that before anybody will sell me anything. Is that the case? Please note that this is a *solely* Antarctic project, and will not be used in the US.

I appreciate any and all help you can give me. I am not
radio-literate, or modem-litereate, for that matter, so excuse the
ignorance of my questions.

Any and all help gratefully accepted.

Cheers, Sridhar.

<much deleted>

So, the audio phase shift is the only 'interesting' part...
How, pray tell, can one having only the usual ham test gear (scope,
probably, dmm, maybe power supply) make the RF phase shift be 90
degrees and the same amplitude at, say 12MHz?
My dual-trace scope is not perfectly calibrated, so that's
out. Generating 48MHz and using flip-flops to get 12MHz in quadrature
doesn't work well in reality (theory is great, but unless your 48MHz
signal is *exactly* 50% duty cycle it has a *strong*component at just
under half of 48MHz, usually near 22MHz. Flip-flops, like all
non-linear devices, are very good as mixers, and the 22MHz mixes with
the 12MHz to make some *interesting* spurs. Filtering out these spurs
usually trashes the 90 degree and equal amplitude you got in the first
place, leaving you back at square one.)(yes, i do know about this.
i've tried it. repeatedly. i KNOW phasing sounds better, and i

WANTED it to work *sigh*). Generate it in quadrature with a dual DDS
and two DACs? Then you must filter the DACs outputs through two
different filters, introducing slightly different phase and amplitude
errors.
I wanted it to work. Really. I've listened to DC receivers
and to crystal filtered super-hets and the difference is amazing.
However, I also want to be able to build a receiver and actually *use*
it, not spend eternity designing the 'perfect' one.
One other interesting thing re: phasing vs filtering: you'll
need *some* additional filtering to do a transmitter anyway (for SSB
at least). This filter will cost you $$, and if you already have to
spend the $$ why not use it for the receiver too? That rather neatly
explains why darned few commercial ham rigs use phasing any more.

We have a number of British-born hams here at Intel. They all agree that "ham" is an ancient English idiom for any kind of amateur in any field. That fits perfectly with what I was told by my Elmer in the early '50s. The application of "ham" to actors was for the same reason... amateur actors tend to overact. The origin of the pronounciation is the first syllable of the old-English pronounciation of amateur.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z MARCH 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 MARCH AND FORECAST UP TO 2 APRIL

No warning is current.

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 086/029

1B. SOLAR FORECAST
31 March 01 April 02 April
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: not availiable.

Estimated Indices : A K Observed A Index 29 March
Learmonth -- ---- ----
Fredericksburg 10 06
Planetary 10 06

Observed Kp for 29 March: 2122 2122

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
31 Mar 07 Quiet to unsettled.
01 Apr 08 Quiet to unsettled.
02 Apr 09 Unsettled.

2C. MAGNETIC COMMENT
No observations were possible due to equipment failure at Learmonth.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
30 Mar normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Mar normal normal normal
01 Apr normal normal fair
02 Apr normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% above predicted monthly values

Observed T index for 30 March: 54

Predicted Monthly T Index for March is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
31 Mar 55 10 to 15% above predicted monthly values.
01 Apr 50 About 10% above predicted monthly values.
02 Apr 50 About 10% above predicted monthly values.

Wm. A.-

Your numbers didn't look right to me, so I checked an old Motorola data
book. I think your data for hFE (DC gain) is actually correct for hfe (ac
gain).

Either way, they're a good transistor!

>But, in practice, the easiest way to make one to work well is
>to just go ahead and design for low distortion.

Well if you look at the table Tom posted, you'll see that even a
matrix network audio phase shifter (published in the ARRL Handbook)
has lousy phase response at the edges too, and a simple first order
network is worse. The Dome networks and B&W networks used in older
designs were even worse. Now compare that to the phase response of
a Collins mechanical filter. Except at the *edges* it's phase response
is flatter. And as you noted, we can cut off the edges with a pre-filter
in either case. Bill Orr notes in his Radio Handbook that while 60 db
opposite sideband rejection is easy with a filter, it's difficult to do
as well as 40 db with a phasing network because of balance problems,
especially near the edges, which shows up as *distortion product aliases
in the passband*.

>FWIW, one of the fanatical AM types showed off his phasing
>receiver at Deerfield NH a few years ago... Guess he didn't
>notice the distortion Gary is worried about. Come to think

>of it, I don't recall hearing complaints about the Sony
>2010's audio quality, which also uses audio phase shift
>networks. (go through the archives of the shortwave newsgroup?)

Better still consult the Hi Fi magazines. The Sony 2010, and
a few other AM receivers, have been *panned* for their poor
implementation of synchronous detection. Differential phase
distortion is a hot topic with the high end folks now, probably
because they've licked almost all the other problems. In
rec.radio.shortwave the 2010 was panned because it's synchronous
detector isn't really synchronous. It's actually a form of ISB
instead of correlating upper and lower sidebands as a true sync
detector does.

I stopped wearing a VOX headset in traffic for this reason. I used to drive to Mission Viejo from Torrance every morning. One fine day while somewhere near Costa Mesa some scumbag in a Porche cutt me off causing me to have to lock up the brakes on a 1 ton crew cab. Needless to say, I made some choice comments about his parentage and sexual habits an so on. Then I heard the squelch tail from the repeater. (oops). Then I heard someone else inquire as to who just said that. I said, "You really don't expect me to identify after that do you?" They agreed and we talked for about 20 minutes about various bad drivers. I did ID on the second turn around, but I switched to PTT operation from then on.

This week on Spectrum we will feature those Mexican boarder blaster radio stations. Our guest is Mike Venditti. Mike was one of the guiding forces behind station XERF and has a unique perspective on the south of the boarder radio scene.

Next week Spectrum will feature a look at TV/FM dxing with Joe Eisenberg. Joe is an expert at chasing the troppo and E skip. He will be bringing his bag of classic airchecks with him. Don't forget to tune in on April 9'th.

Saturday April 16'th Spectrum will look at the world of weather satellite monitoring and weather fax.

We will do our listener appreciation day on April 23'rd with answers to your paper mail, e-mail and phone calls.

Don't forget April 30'th Spectrum will be broadcasting live from the Dayton hamfest. Larry Steal and I will be on the scene giving you the total Dayton report.
--
Spectrum airs live Sunday at 0300 UTC (2200 EST Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
KHNC, 1360 AM, Denver, CO (Denver Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EST, on WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
Monday at 0400 UTC (2300 EST Sunday),
on WWCR, 7435 KHz, Nashville, TN (World Wide)

Last-modified: $Date: 1994/01/02 22:00 $
Version: $Revision: 1.06 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with
```

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

3509. Re: HELP: Anyone know what a XR2206 chip is?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-31 04:28:36 UTC
From: Dean Aldridge <aldridged@ccc.govt.nz>
Message-ID: <2ndjhk$hb7@idril.ccc.govt.nz>
Source record: 269151
Cross-posted to: sci.electronics,rec.radio.amateur.digital.misc,rec.radio.amateur.misc,uk.misc

zawada@softage.demon.co.uk (A Gnome On A Mission)

The XR2206 is a function generator. I've seen examples of it giving sinewaves, sawtooths and square waves. I think there are a few places you can get them. I'm not sure if they've been deleted or not because I've seen them in some pretty old schematics. I live in New Zealand but I can't suggest any American outlets, except maybe try Paia or Digikey (ie: the biggies). I know you can get them from "Farnell Electronics", Private Bag, Market Rd, Auckland, New Zealand, or in Australia there are several companies that could probably help, like Dick Smith Electronics or Rod Irving Electronics (sorry don't have a contact number for them).

Good luck in your search

Dean

3510. Daily Summary of Solar Geophysical Activity for 30 March

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-31 05:00:28 UTC

/\

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

30 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 30 MARCH, 1994

NOTE: The very intense stratospheric warming covers the polar region at
10 HPA and the mean zonal wind at 60N is weakening. The temperature
gradient is reversed between 60N and the pole in the middle and upper
stratosphere from 30 HPA upwards. Final warming is in progress.

The 3-Hr Ap Indices for 29 MAR 94 are: 10 4 7 7 7 5 7 8
Greater than 2 MeV Electron Fluence for 30 MAR is: 3.0E+07

SYNOPSIS OF ACTIVITY

Solar activity was low due to an optically uncorrelated
C1.7 flare at 30/0813Z. Region 7695 (S15W23) is decaying slowly.
New Region 7698 (S16E02) emerged on the disk.

Solar activity forecast: solar activity is expected to be
very low, but there is an outside chance of an isolated C flare.

The geomagnetic field was quiet until 30/0900Z and mostly
unsettled afterwards.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 31 mar-02 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 31 mar-02 apr

A. Middle Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Normal conditions will persist over at least the next 3 days.
Fair propagation will exist for the high and polar latitudes,
good propagation over the middle latitudes, and good to very
good propagation for the low and equatorial latitudes.
Occasional night-sector minor signal degradation may affect
some transauroral paths.

------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>Okay... I'll bite. Have we quit building full duplex remote bases now?
>The remote shouldn't care if there is a zero tail or a 20 second tail.
>What gives?
>

Our full-duplex radios allow transmitting on one band while receiving on the other band. I don't know of any frequency-agile rigs that can simultaneously transmit and receive on the same band. That would require a repeater-type duplexer that was electronically tunable and *tiny*. Remote basing requires simultaneous transmission and reception for each direction, so full duplex remote basing would require the rig to be transmitting two signals and receiving two signals all at the same time. When remoting to a repeater, I have to wait for the repeater to stop transmitting so the remote stops transmitting, so it is in a position to receive my signal and turn around.

>for a PC.

You are right - the first 2 are Samsung 1M x 1 DRAM's 80ns - the BJ is likely to be a mask revision or a die shrink to improve speed performance

The 3rd is a Samsung 4M x 1 DRAM 80ns

The 4th is 4M x 1 but you may have the pt no wrong - it should be M5M44100AJ

FYI the Mitsubishi 1M x 4 DRAM would be M5M44400AJ

I have some good news for you! Yes, you can do it with off-the-shelf equipment, and even better news: There's a guy at McMurdo (Antarctica) who's done it! You want to get ahold of Al Oxton <oxton@atsvax.rsmas.miami.edu>. (or oxton@mcmurdo.gov) Tell him I gave you his name. He did something similar up here in New Hampshire using commercial radios with packet controllers. I was involved with the project just a little bit, but it was so many years ago, I've forgotten most of it. You don't need full duplex, btw.

3520. Re: dual band HT advice

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-31 12:38:00 UTC
From: clinton.peebles@kbsbbs.com
Message-ID: <9404020846281940@kbsbbs.com>
Source record: 269161

To: cropley@cbnewsf.cb.att.com

C> Please follow up with a post. I to am interested in getting an HT.

C> Q. Are dual banders (say a 2m and 70cm) poor performers due to any
C> compromises that are need to rx/tx on dual bands with 1 antenna?

The March/94 issue of QST reviews dual band hand helds. I have the Icom
IC-W21AT and have no complaints about it at all.

Cecil A Moore (Cecil_A_Moore@ccm.hf.INTel.COM) wrote:

: Text item: Text_1

: The HDN release information was posted on info-hams on Mar. 26.
: It said that DSPMORSE.ZIP was located in HAMSRC. I FTPed to both
: ftp.fidonet.org and ftp.halcyon.com and found no files in the
: HAMSRC directory. I am a novice at Internet stuff... did I do
: something wrong? Where is DSPMORSE.ZIP?

: Lee, (ab5sm) I can't figger out your email address from the header...
: help?

: 73, Cecil, kg7bk@indirect.com
: (I do not speak for Intel on Internet)

the two internet sites listed in the announcements have been spotty
but i am working on getting an FTP host permanently and will eliminate
the current problem of files not arriving soon enough or having been
removed by the time someone tries to ftp them.

in the meantime .. i will place the files on hold for those that e-mail
me with a specific request in the appropriate directory.

dspmorse.zip can be retrieved at ftp.netcom.com in /pub/ab5sm/hamsrc

please let me know when you have it so i can remove it from the directory
and i hope to have the ftp site problem resolved soon

thanks for your post and interest in the Ham Distribution Net.

>
> Yeah, chill out. So what if it takes less time to get a driver
> license, handgun permit, etc. We don't want the FCC to be too hasty
> here assigning these callsigns.

The priority level of ham license issance versus the other types is
driven by the shear number of people the FCC does not serve. i.e.
there would be an awful lot of voters upset if it took 9 weeks to
get a drivers lince for example. Further more, gun owners, vehicle
operators form a larger economic community than hams (money talks
bs walks as one employee at D.C. ham store once told me.)

: >of it, I don't recall hearing complaints about the Sony
: >2010's audio quality, which also uses audio phase shift
: >networks. (go through the archives of the shortwave newsgroup?)

: Better still consult the Hi Fi magazines. The Sony 2010, and
: a few other AM receivers, have been *panned* for their poor
: implementation of synchronous detection. Differential phase
: distortion is a hot topic with the high end folks now, probably
: because they've licked almost all the other problems. In
: rec.radio.shortwave the 2010 was panned because it's synchronous
: detector isn't really synchronous. It's actually a form of ISB
: instead of correlating upper and lower sidebands as a true sync
: detector does.

So what?

The point is, does the audio phase shift networks used in the 2010
cause a noticeable degradation in audio quality as perceived by
the users of the radio? And, since we are primarily talking
about SSB, as opposed to AM, there is *no* benefit to having
a detector that can correlate the upper and lower sidebands--we
only have one sideband to work with on receive.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;

3525. US License Examination Opportunities Scheduled 3/31/94 to 6/27/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-31 14:50:58 UTC
From: bjahnke@arrl.org
Message-ID: <2536@bjj>
Source record: 269169
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

>Reply-To: cchris@charlie.usd.edu

>I just read in 'THE DX BULLETIN" about subscribing to something called the DX
>reflector. The administrator's address was given as dx-REQUEST@unbc.edu but
>this does not appear to work. Does anyone know anything about this or how to
>get a message to the administrator? If so, I would appreciate some info via
>E-mail. Thanks.
>Chris, AC0M
>cchris@charlie.usd.edu

A message on the DX reflector replied to other's asking the same
question. It noted that the subscription process is manual (not
machine/automatic as in other lists) and the administrator has been
seriously backlogged. Bottom line was "be patient".

3527. passive satellites

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-31 15:49:59 UTC
From: parnoul@chouette.saclay.cea.fr
Message-ID: <1994Mar31.154959.1752@nenuphar.saclay.cea.fr>
Source record: 269171

Hi there,

A colleague just realized that the news posting outside the company is
up again and running, we have been quiet for some reason for more than
one year... Reading the news was fine though.

Following is an idea I'd like to have some feedback from the EME'ers
for instance.
Do you think the big telecom satellites operating geosynchonously(sp?)
above the equator could be used as passive satellites for ham contacts ?

The reflecting surface should not be neglectable considering the huge
solar panels, at least the satellite body should provide echos back
to earth.

I heard that the first ham "satellites" were aluminium covered ballons,
reflecting some of the VHF power.

The geosync. satellites are much further away, maybe the big guns in EME
have a chance to hear something back ?

The input stages of the mentionned satellites operating on whatever freq.
might not appreciate the strong field shooting at them... Any regulations
on that point ?

What do you think ?

73 de f5hnk/Patrick

Message-ID: <1994Mar31.160421.3510@ke4zv.atl.ga.us>
Source record: 269172

In article <gregCnFxoC.JIF@netcom.com> greg@netcom.com (Greg Bullough) writes:
>The subject is 'what kind of award makes sense for no-code techs?'
>At risk of sounding a bit patronizing, I'd look really hard at the
>Boy Scout merit-badge and ranking model.

It *is* a bit patronizing to think that adults require merit badges,
but such is life. Any voluntary concept that encourages people to
experiment and try new things can't be all bad.

>So, we can start by listing some things that are worth-while for the
>new ham to try, by which s/he'll learn. And some categories to put
>those things in (e.g. Technical, Operational, Experimental, Organizational).
>
>And yes, I think a couple of repeater contacts ought to be worth something,
>but not in and of itself. Here's a partial list of things that might
>score points toward the, Personal Frontiers award:
>
> 1. Technical
> a. Complete a home-brew antenna project
> b. Install a mobile rig in your car
> c. Find a cable-TV leak

Good, good, good.

> d. Build a code-practice oscillator

Not relevant to the code test free licensee. Better would be some
station accessory that's really useful to the code test free licensee
such as a Baycom kit.

> e. Build an HF receiver kit

Not really relevant to the code test free licensee. Better would be a UHF
transmitter or receiver project.

> 2. Operational
> a. Complete a VHF or UHF simplex QSO of more than
> <pick a figure> miles

Smacks of Dxing, but Ok.

> b. Complete a VHF or UHF QSO on SSB or CW

Or ATV, packet, satellite, etc.

> c. Participate in a fox-hunt
> d. Check into a VHF or UHF traffic net
> e. Handle a piece of traffic from a PBBS

Good, good, good.

> f. Sign up for an upgrade class
> g. Get up to 5 words per minute.

Neither relevant to the code test free licensee.

> 3. Organizational
> a. Attend a meeting of a local ham club
> b. Provide amateur radio communications at a public event,
> under sponsorship of a local amateur radio group
> c. Participate in RACES or ARES activities during
> an emergency
> d. Attend a ham-fest...

All good.

>I'm sure there are more that can be added. The idea is to figure out the things
>that new hams can be doing to grow and develop in the hobby/service and
>both suggest them and recognize an effort towards giving them a try. The list
>of items has to be big enough so that the issue of 'but we haven't had a
>natural disaster this year' doesn't really hamper getting a certificate.
>
>I'd limit the award to the first couple of years after licensing, and
>also to Novice and Technician classes. The idea is to get NEW hams expanding
>their horizons, trying new things, and into the various organizations.

Wouldn't hurt to get some of the old duffers to try a few new things too.
Many have fallen into a rut. I wouldn't limit this to just new hams. Make
it something *all* hams can do together. But lay off the Morse and "upgrade"
stuff. The Tech license isn't a way station, it's an end to itself intended
to fill the VHF/UHF bands with activity. Let's concentrate on that and let
those who want HF follow the Novice track to General. There are already
plenty of HF awards.

>How, pray tell, can one having only the usual ham test gear (scope,
>probably, dmm, maybe power supply) make the RF phase shift be 90
>degrees and the same amplitude at, say 12MHz?

This is the easy part. There are three main ways to do it. The most straight forward way is a quarterwave transmission line, distributed or lumped. A second way is to use two loosely coupled LC tanks arranged so they're in quadrature phase. A third way is to use a RL lag network in one leg and a RC lead network in the other. Each will give 45 degrees of phase shift when R=L=C with a net shift between the two of 90 degrees. Since the RF is a pure tone at one frequency, getting an accurate phase shift is fairly trivial.

It seems to me that Mike KK6GM is talking about using dual band radio such as the ones made by Alinco and Icom which can be remotely control. These radios are not remote bases in the since that most people think of remote bases. They are nothing more than half-duplex cross band repeaters. It is interesting to note, that the person who uses such a system loses control of the repeater until such time as signal on the oter input goes away. A true remote base would use a pair of frequencies for up link and down link from the remote system so that the user of the remote base can cause the remote transceiver to turnaround at any time.

What might be better is a changes file each month with a pointer to the full file for those who want it.

Failing that, how about posting with the same message IDs every month so all I have to do is keep the IDs on file to avoid getting the list every time. Not sure how long sites normally keep message IDs so not sure if it would work.

SB QST ARL ARLB029
ARLB029 Tornadoes bring out hams

Tornadoes bring out hams

Members of the ARRL Amateur Radio Emergency Service have been extremely active and visible during and following tornadoes that struck several southeastern states on Sunday, March 27.

In Alabama, more than 70 amateurs in 10 counties participated in the state's 2-meter weather spotting net, as well as in damage assessment following the storms, according to Herb Griffin, N4ZOV, president of the Calhoun County Amateur Radio Association, an ARRL Special Services Club. The National Weather Service in Birmingham received the reports via W4CUE, repeater station of the Birmingham Amateur Radio Club.

Carol Boothe, KE4HJU, was cited by Griffin and others for yeoman service as net control on the 2-meter net, conducted through repeater station WB4GNA, with its wide coverage from the highest point in Alabama, atop Mt. Cheaha.

In Georgia, where the state's ARES net was activated Sunday afternoon following reports of tornadoes in Alabama, amateurs manned ARES nets in 12 counties in the storm's expected path. Local 2-meter net reports were funneled to the Georgia ARES Net on 3975 kHz, with liaisons to both Alabama and South Carolina. From there spotting reports were relayed to state Red Cross Headquarters in Atlanta.

Georgia ARRL Section Emergency Coordinator Dot Fennell, KA4HHE, told an interviewer for WJCL-TV in Savannah about Amateur Radio's role in storm communications. ''Doppler radar is wonderful,'' she said, ''but the human eye is the best weather instrument.''

The ARRL welcomes reports and photos from amateurs involved in these operations.

3535. Re: STOP SENDING HAMS ON USENET CRAP !!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-31 18:30:02 UTC
From: teacherjh@aol.com
Message-ID: <2nf4ra$ka3@search01.news.aol.com>
Source record: 269079

People have such different levels of access to different parts of the internet that no one method will satisfy all. However, the best solution I can come up with would be to put the actual postings in one usenet group, and have a short message in all the others pointing to that usenet area (and an ftp site also) where they can get the info. Maybe the same should be done for the FAQ lists... instead of periodic large postings everywhere, one periodic large posting in one newsgroup, and a short posting everywhere shoing how to get it from the newsgroup, and how to get it from an ftp site.

btw, where do they get the "hams on usenet" info? does somebody read evey post and look for a callsign at the bottom?

Yes. That's what you get for taking the no-code test. ;-)

On a slightly more serious note, yeah, there's an abundance of turkeys on ham radio, just like every other walk of life. Had you tuned to 3913, you might well have heard people discussing philosophy, or doing disaster-relief communications. If you ever choose to learn Morse code (which, of course, you'll need anyway to use 80 meters as anything except an emetic :-), the CW subbands tend to be somewhat more civilized; your average jerk just doesn't want to go to that much effort for so little instant gratification (of course, that means that the above-average jerks show up there from time to time).

Welcome to reality. And welcome to ham radio, too. ;-)

Well, there's always RCC. More seriously, there's always grid-chasing and other similar activities. (Do satellite contacts count for WAS? WAC? I'm not into paper chasing, so I don't know offhand.)

Having missed the opriginal article, for reasons one might guess, if the idea is to make it possible to acquire several square meters worth of awards for sitting in one's chair like the standard DX hound, do we really want to encourage this? At least grid-square chasing gets one out in the sunlight now and then ;-).

: Wait... I am completely confused by Zack's arguments.

: A DSB signal that has a 1 kc modulation consists of two "carriers"
: spaced 2 kc apart, not 1 kc, no? (Imagine AM with 1 kc modulation.
: Now take away the carrier.)

Right. If you assume Zack meant .5 kHz modulation, then it makes sense:
The two sidebands are carrier + and - .5 kHz and the third-order
IMD products are carrier + and - 1.5 kHz. So the recovered audio has
a third harmonic, but no second harmonic. So symmetrical clipping of
a DSB waveform is the same as symmetrical clipping of the baseband
audio in that it generates odd-order products, but not even-order.

Why not use a Weaver (Third Method) exciter? It is easy to generate a couple of 1800Hz carriers which are 90 degrees out of phase, and fairly easy to generate a couple of 10.7MHz carriers which are 90 degrees out of phase, and the rest is reasonably straightforward without any expensive bits. SBL1 mixers are cheap, so the fact that you need four shouldn't be prohibitive.

: >experienced in metro areas, frequencies, locations, etc. Please send
: >the reports to ehare@arrl.org.

: Find the 3rd order and 5th order (if you wish) intercept
: point, and then publish the frequency response of the front
: end RF filter, and you're done. Given those two pieces of
: information, you will have a very good idea of what kind of
: intermod problem you get in that receiver.

I agree.

The only problem is that it might be hard to get at the output of the
radio's front-end filter for testing. Another method to obtain the
same information would be to plot the 3rd-order intercept point as a
function of tone spacing. Plot it with tone spacing (frequency)
on a logarithmic axis so you can get in-band and out-of-band info
on the same chart. That would actually be more useful information
than Ken's method.

: >Some of the "IMD" problems being reported are probably receiver
: >image problems, so we are also going to measure and report the
: >image rejection. If anyone has reports of image-response interference,
: >I would like to know about that, too.

: Barring the use of image supression mixers (which I haven't
: seen yet on VHF+ ham rigs), the front end response
: is all you need, plus the tuning function, if any.

I'm not sure what the block diagrams of these radios look like, but if
they are using a low-frequency first IF (10.7 or 21.4 MHz) without
image-reject mixers, then the image rejection will be 0 dB. How do
they get around the problem? Up-convert to a high first IF?

: There are WAY TOO MANY possible combinations of frequencies
: that will cause intermod under the right conditions. I think
: what people want is a figure of merit that makes comparison
: easy. 3rd order intercept point is about the best FOM
: there is.

Agreed.

John Welch (jjw@seastar.org) wrote:

: So, the audio phase shift is the only 'interesting' part...
: How, pray tell, can one having only the usual ham test gear (scope,
: probably, dmm, maybe power supply) make the RF phase shift be 90
: degrees and the same amplitude at, say 12MHz?

Easy: Just feed in an audio tone to the mic input and adjust the
RF amplitude and phase until the unwanted sideband disappears.

: One other interesting thing re: phasing vs filtering: you'll
: need *some* additional filtering to do a transmitter anyway (for SSB
: at least).

Not really, unless you want to do RF clipping. And in that case, you
still have saved one of the two required crystal filters.

: This filter will cost you $$, and if you already have to
: spend the $$ why not use it for the receiver too? That rather neatly
: explains why darned few commercial ham rigs use phasing any more.

Or turn it the other way around: Since the receiver portion of a
transceiver already has a crystal filter, why not use it for the
transmitter as well? I think that's the reason you don't find
phasing-type SSB generators in commercial transceivers.

>under half of 48MHz, usually near 22MHz. Flip-flops, like all

No, you get a spur at exactly 24 MHz, the second harmonic. If you
drive the mixer differentially from Q and Qbar, I believe this
second harmonic will cancel out for all practical purposes.
Many popular mixers (SBL-1 etc) have floating LO windings that make
this easy to do.

Also, the propagation delay doesn't have to be zero, it only has to
be identical between the I and Q outputs, which if they are flip
flops on the same chip will be very close (easily under a nanosecond
for FACT logic, 100 psec. for ECLIPSE logic.)

The tough part isn't the audio 90 degree shift or the RF 90 degree shift,
it's getting amplitude and phase matched mixers.

Andrew M. Cohn (andy@clark.net) wrote:

: Hi Folks...

Hi, Andy. I am glad that I spotted this one, of course the
thread subject did get my attention.

: I will be in Newington on business during the last few days of this
: month, and I'm wondering about how far it might be from my hotel on
: Columbus Boulevard in New Britain to your HQ?

Well, the New Britain line is only a few miles from here, so you
will be within about 5 miles or so. If you contact tzimmer@arrl.org
and ask for a set of directions, she can get you from there to here.
We are open for visitor tours M-F, 8-5 eastern time. If you are
only going to be here on a weekend, the main building is closed, but
W1AW is open for visitors from 1 PM Saturday, and from 4 PM Sunday.
After 4, the bulletins are running, so guest operation ceases.
If you can only make it here on Sat or Sun, give me a call in advance.
Most weekends I can drive on in and give you a private tour of the HQ
main building. With many of the offices closed and locked, it is not quite
as fun as during the week, but I have a key to the Lab, so you will get
to see some of the highlights.

: Also, I would appreciate knowing if there any professional videography
: services that you could recommend in the Newington/New Britain area.
: Maybe in the past at HQ you may have retained a video production service
: that you could recommend to me?

I can't answer this one, but I think our Educational Activities
Department can offer some guidance. Contact rwhite@arrl.org.

I will point out that posting to rec.radio.amateur.misc is not the
best way to contact ARRL HQ staff. A list of HQ staff addresses
is available by ftp from our site at oak.oakland.edu or by email
from our server at info@arrl.org. I suggest to all that they
contact ARRL directly rather than rely on the correct staffer
seeing the right post.

: Now this chart illustrates the problem I've been talking about. As
: we can see, the difference in delay with frequency is quite marked.
: Sure the phase delay increases *smoothly* with frequency delta, but
: the magnitude of the error rapidly climbs with increasing frequency
: delta. This is our old friend click-boom. ...

Other people besided Gary may be confused by this, so I'll post an
explanation.

The graph above plots phase, not delay. A constant delay results in
a constantly-rising phase plot. For example, a 1 millisecond delay
is 36 degrees at 100 Hz, 360 degrees at 1000 Hz, 3600 degrees at
10,000 Hz, etc.

Constant delay does not cause the "click-boom" that Gary mentioned. Think about it: You could record a voice on a tape recorder and play it back DAYS later without any "click boom." It's only when the delay is different at different frequencies (that is, the phase versus frequency plot is not a straight line) that there is a potential problem.

While the plot above looks like a straight line, it really isn't because of the logarithmic x-axis. However, as the chart that Tom Bruhns posted of a typical phase-shift network shows, it really isn't too bad. His chart shows that between 400 and 2786 Hz, the maximum phase error from a straight line varies smoothly between +17.2 to -20.9 degrees, which is far better than you would get with a typical transceiver-type crystal filter.

I expect most of the delay variation would come from the audio filter (that comes before the phase-shift network). Such a filter can be much flatter than a typical crystal filter for the three reasons I mentioned in a previous posting: (1) Doesn't need as sharp a cutoff as a receiver-type filter, (2) Can use a filter type with inherently flatter delay (non-Chebyshev), and (3) Pole Q and placement are much easier to control at audio frequencies than at RF.

: flatter amplitude and delay response.

Yesterday, I posted results of a simulation of a quadrature audio network outlined in the ARRL Handbook. One thing to note is that the phase ramp is as Alan suggests in his posting. The "frequency" column is in 1/5 octave steps, and the delta phase between entries is practically the same across the band. So the phase looks like a straight line on a log-frequency scale.

But what if it was a design goal to come up with a quadrature phase network with flat frequency response and linear phase? Would that be possible? I think so, and I offer comments below in support of that idea. If I don't get to it, maybe someone else can check out the suggestion at the end to see if it really can work.

Soapbox: I'm treating this as a design problem, not something to wave my arms about. I start by summarizing some things that are likely to be relevant that could be tools to lead to a good solution. There is an assumption that flat response and linear phase will lead to something that people will think "sounds good." That may be wrong, but so far there seems to be good agreement about it. My purpose here is to simply explore ways to achieve this in a phasing system. This does NOT say that the same thing can't be done with filtering at carrier frequencies.

Observations:

0. The relative phase and amplitude response of a system can be completely determined by the positions of the poles and zeros representing the system; there is no need to commit to a particular physical implementation until the desired pole and zero positions are determined.

1. If a pole at -x+jy is balanced by a zero at +x+jy, the frequency response from that pair is exactly flat. The phase response, d(phi)/df, is exactly twice as much for such a pair as it is for the pole alone, at every frequency.

2. Techniques exist for putting poles at any interesting place on the left half of the s-plane, and for putting zeros at any interesting place on the s-plane. For example, for audio work, state-variable filter blocks can do this.

3. If one channel of a quadrature audio network has a phase ramp
vs frequency d(phi)/df = x, then the other channel must have
the same d(phi)/df over the band of interest to maintain a
constand phase difference between the channels. Since d(phi)/df
determines group delay, the two channels will have identical
group delays.

4. Linear phase is characterized by d(phi)/df invariant with frequency.

5. A strict delay has zero phase shift at zero frequency. Thus to
achieve quadrature phase, at least one channel will be characterized
by a phase shift in addition to any delay, even if d(phi)/df is
invariant over the band of interest.

6. None of the above precludes having a constant d(phi)/df in each
channel with a constant 90 degree phase difference between channels
and a flat frequency response in the band of interest. However, it
also doesn't tell you how to achieve this--it only provides some
hints.

7. A maximally-flat-delay (MFD) filter achieves a very constant d(phi)/df
over its passband.

8. A MFD _lowpass_ filter has nearly constant d(phi)/df through zero
frequency, and zero phase shift at zero frequency. It represents a
simple delay.

9. A MFD _bandpass_ filter has nearly constant d(phi)/df over its
passband, but not outside. The result can be a phase shift relative
to a MFD lowpass in the shared passband. THIS IS A KEY TO A POSSIBLE
ANSWER TO THE ORIGINAL QUESTION!

10. It _should_ be possible to find a pair of MFD filters with overlapped
passbands (either two bandpass filters or a lowpass and a bandpass)
which have equal d(phi)/df and a 90 (or 45--see paragraph 11) degree
phase difference between the channels in the shared passband.
Actually finding such a pair is the exercise remaining to be done!
Any volunteers?

11. MFD filters are notorious for non-flat amplitude response. This can
be taken care of by invoking paragraph 1: put a zero in for each pole,
which will double d(phi)/df and make the frequency response dead flat.
This is why we only need 45 degrees between the MFD filters used as
prototypes as suggested in paragraph 10.

12. Expect that it will take fairly high order filters to accomplish this
over the 300Hz-3kHz band. Tenth order wouldn't surprise me, to get
0.1 degree matching. The amplitude matching will depend only on
how accurately the implementation can place the poles and zeros at
the desired positions.

As a simple feasibility check, I asked a curvefitter to fit to a couple
linear phase ramps with constant amplitude, offset by 90 degrees, in the
range from 300Hz to 3.5kHz, and it didn't have any trouble getting

within a tenth dB and under a degree, with about 14 poles and 14 zeros
for each. None of the poles was particularly high Q: max about 8.

3554. HELP! The FCC will not issue me a ham license

>On December 18, 1993, I took an ARRL test session and earned a Technician w/HF
>license. During the week of February 20th, other people that were at the
>December 18th test session were receiving their new licenses. Not me!
>After waiting a week, I called the ARRL to see what was going on.
>They had received my paper work and sent it on to the FCC on January 6th.
...
etc.

some ideas:

1) you didn't throw it out as junk mail? it's sent out in a pretty
bland envelope == possibility that someone tossed it accidentially?
(no - because then the FCC would have been able to tell you something)

2) you've got the right address in force? had a kid some time ago
that had moved the day after the test and the folks didn't leave a
forwarding address.

if you add about 2 weeks for christmas, you'd be due for delivery next week.
hang in there....

>than Ken's method.

How about just using the squelch break as an indicator. That's
the event that is annoying anyhow, and that's what the user
will see. The problem with the IP3 vs. tone spacing is that
you have lots of combinations. A 5 MHz spacing in band may
behave differently than 5 MHZ out of band since the overall
sensitivity is different. If you know what level of
signals cause the non-linearity, and know the transfer function,
you will be able to compute the intermod rejection the tone
pair of your choice -- I agree with Al that his method will
create a nice graph, and may be easier to interpret.

>I'm not sure what the block diagrams of these radios look like, but if
>they are using a low-frequency first IF (10.7 or 21.4 MHz) without
>image-reject mixers, then the image rejection will be 0 dB. How do
>they get around the problem? Up-convert to a high first IF?

No, use an adjustable image reject filter. My FT-530 has
a set of three varactor tuned IR filters in the front end.
Works for image rejection, horrible for intermod. That's how
an old analog AM radio works, though they use a set of auxiliary
caps in the main tuning capacitor instead of varactors.

The FT-530 uses a single BJT for a mixer for UHF, and a single
JFET for VHF -- yes CHEAP CHEAP CHEAP

The Yaesu uses a 15.25 MHz for VHF and 47.225 MHz for UHF.
I suppose it would have been better for them to use a high
IF for VHF also, but then you get IF interference when in
dual band receive. Gee, I wonder how ICOM is dealing with
these problems in their tri-bander.....

-Ken

I also built the W9GR kit which I use most of the time. However, like
the post above, I am distracted by the unusual ringing-like sounds in
the so-called "optimum noise-reducing mode...program # 3 on mine". It
also seems to me that the high-frequency response is compromised. HOWEVER,
I still like it very much used in program #1, which still reduces the
white-noise enough to be quite helpful. Also if you get an occasional
bothersome heterodyne, flipping the toggle-switch to the opposite side
quickly takes it out. I leave my agc in the FAST mode all of the time..
(Icom-751) which seems to contol the audio level nicely to marginally
fill the DSP window with large differences in signal-strength.
Although I haven't used the other features much, they certainly do a
beautiful job of meeting their specifications.

ISSUED AT 31/2330Z MARCH 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 MARCH AND FORECAST UP TO 3 APRIL

IPS Warning 10 was issued on 31 MAR and is current for 3-14 APR.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 085/027

1B. SOLAR FORECAST
01 April 02 April 03 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: not availiable prior to 9UT then
quiet conditions were observed.

Estimated Indices : A K Observed A Index 30 March
Learmonth 04 ---2 2111
Fredericksburg 08 09
Planetary 10 12

Observed Kp for 30 March: 1114 3333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Apr 10 Quiet.
02 Apr 12 Quiet to unsettled.
03 Apr 22 Active.

2C. MAGNETIC COMMENT
Coronal hole induced geomagnetic field activity is expected to start
on 3 April, active to minor storm levels are expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Mar normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Apr normal normal fair
02 Apr normal normal fair
03 Apr normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 15 to 30% below predicted monthly values

Observed T index for 31 March: 10

Predicted Monthly T Index for March is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Apr 40 Near predicted monthly values.
02 Apr 40 Near predicted monthly values.
03 Apr 10 10 to 20% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

3563. RADIO HOBBY OVERVIEW - A proposal

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-31 23:25:24 UTC
From: karayan@blitzen.cc.bellcore.com
Message-ID: <2nfm54$6k4@blitzen.cc.bellcore.com>
Source record: 269111

This posting deals with an idea which I think is long overdue. I certainly don't need to mention to readers of this group how incredibly diverse the radio hobby is. This hobby has something for everyone! I just thought that we need some sort of a navigation map to take someone by the hand and show what is / can be done by a radio hobbyist. Such a thing would serve a newcomer in selecting some specific interest, but will also allow the seasoned radio hobbyist to move on to some new niche.

Before diving into such a project, I need to find out if anyone else has done something similar. I know of the intro articles posted here regularly, but I'm looking for something in a higher level of abstraction and all-inclusive. I started to build something. Here is a sample:

********** Begin sample **********

GUIDE TO RADIO HOBBY ACTIVITIES

This article attempts to provide a map of activities available to radio hobbyists based on the frequency spectrum. The intend for it is to serve as a navigation tool to anyone looking to enter the radio hobby, or anyone who wants to explore new horizons. The map contains a fair amount of detail, including some rather esoteric niche interests, but it does not pretend to be exhaustive. Special codes point to netnews groups where more info can be found. They are:
(SH)= rec.radio.shortwave; (SC)= rec.radio.scanner;
(HAM)= rec.radio.amateur.misc; (BC)= rec.radio.broadcasting;
Any additions/changes/corrections should be forwarded to George, N2OWO, at karayan@cc.bellcore.com .

FREQUENCY RANGE (MHz)	HOBBY ACTIVITIES	EQUIPMENT REQUIRED
0-0.03	Hunting for whistlers (natural radio) [SH] Listening to LORAN stations [SH]	Special receiver or converter + a longwave receiver
0.15-0.45	Hunting for distant marine and aero beacons [SH]	Receiver with longwave band
.18-.19	Low power transmitting (propagation studies, comms) LOWFERs: no license required [SH,HAM]	Homebuilt xmitter
.45-.5	Hunting for marine CW stations and emergency comms [SH]	Receiver with longwave band
.5-1.7	Casual broadcast listening [BC] Hunting for distant AM stations [BC,SH]	AM radio Better AM radio

```
| Low power xmitting - no license [SH,HAM] | Homebuilt xmitter
-----------|---------------------------------------------|--------------------
108-138 | Listening to airliner and airport comms [SC] | Scanner
-----------|---------------------------------------------|--------------------

******* End of sample ************
```

As you can see, it provides the reader with an overview of what is done in radio hobbyism and it's as inclusive as possible. All info is arranged by frequency, so that someone with a radio can figure out what a given set of freqs can do for them. There are also references (the [..] flags) to netnews groups where one can go and find out more.

Don't worry about the specifics listed in the sample above. Just let me know what you think about the idea. I can create the whole thing and then post it to various rec.radio.* groups for comment/corrections/etc. Then, the (ever-evolving, no doubt) article can be posted periodically in the rec.radio groups.

Any comments/suggestions/pointers/flames?

George Karayannopoulos N2OWO
karayan@cc.bellcore.com Bellcore, Red Bank, NJ

>would like for my dad to be able to call it up under windows, but
>no matter what I change in the PIF, I get stutters and missing characters.
>
I regularly use SuperMorse under windows, and it works fine. I belive the key parts
of my set up are:

1. In my sm.pif setup, I have supermorse having exclusive use of all computer
resources.
2. I never use it windowed, since windowing takes some of the computer resources.
3. I use the "loop" timer instead of the "timer" timer (in the options menu).
SuperMorse seems to like this.

Most of this comes from the SuperMorse documentation, so it appears that the author thinks
it works under windows, and it works for me. So give it another try. (:}
